Aaron, your attempts at extracting the urine out of the English language
as spoken by the English make you look rather stupid.

Try:
They'll not catch me.
They'll never catch me.
They'll ne'er catch me.

or maybe, at a push:
They'll naught catch me
They will nay catch me

or how about these:
bread wi nowt taken out (from a tv advert).
Our Aaron knows nowt.
Bungalow Aaron has nowt upstairs.

HINTS:
Nowt means "nothing".
"They'll nothing catch me" makes no sense.
Check up where the word is commonly used, I think you may be confused.

ok ppl help me figure this out ok ....i am no expert on shooting skip , never have been , never will be but anyway i was engaged in a debate with a much more experienced cber the other night on which friquencies are the best to shoot skip (as in which frequencies a cber has better chances of getting responses from other cbers in dxland)

i think i offended him during this debate and he got a little pissed but that wasnt my intentions at all ..i told him that i have better success andluck with shooting skp on lower channels than i do on normal regular 40 channel frequencies. ok he answerd by saying something like well there is no difference in low side from normal channels " i can talk skip just as easily here on regular 40 as down below "

i answered well as for me i think a person could shoot skp better on lowside channels BECAUSE there is less traffic , less conggesstion therefore easier to get through to someone.. man did he get slightly pissed at me lol.....i was only trying to tell him from MY experience that i have better success shooting skip in the past from lowside channels

then hesaid something like...you can shoot skip up here on regular 40 because there are more ppl ..hello correct me if i am mistaken but doesnt more ppl mean more difficuly in getting through and less ppl mean easier to get through?

ANALOGY: ..is it not easier for a person to walk through a shopping mall when its less crowded as opposed to trying to manouver through a mall when its packed full of ppl? and so doesnt it make more sens to think less radios keying up on lowside easier to get throught to someone ....like i said i couldnt comprehend his conept of thinking how it is better or easier to shoot skip on frequencies which are so badly jammed and crowded with noise and so many big stations trying to keydown at once!

to me he was thinking backwards i just couldnt get him to see my point of view and he thought i was crazy (like i said i am no expert just seems like common sense thinking to me)

As big a surprise to you as it was to me, the inevitable 12.6 Negative earth. There were and probably still are some split systems that started on 24 and some busses ran the air on 24 as well but there is a 12 Volt system on them as well that does the accessories. Moose batteries, moose cables, and the inevitable Leece-Neville alternator to charge the thing and run your 528 pill amp. Kind of reminds one of an old Fiat with the batteries in the boot.

We had a 1978 transit bus in the fleet (We called it The Thunderchicken) that did both voltages on the same alternator which appeared to have been stolen from Hoover Dam. Guess what killed the old dear, a major electrical fire.

I have heard rumors that the gnomes of Detroit have a nominally 36 volt, 42 running, system in mind which will probably also be a split system as compooters get a bit surly at that voltage not to mention stereo systems. As car fires have exceeded house fires for years, my advice to the young is to join the fire brigade for job security.

Hi Ron,

After reading (and re-reading) your post, I'm reminded about the old story about the cow that $hit on the cold bird to warm him up and the cat that pulled him from the $hit to eat him. The moral being that not everybody that $hits on you is your enemy and not everybody who gets you outta some $hit is your friend. I personally don't think that I've given anyone on r.r.cb much $hit, but I will tell you the truth. (Although I'll not repeat it ad nauseum.)

I'm on r.r.cb because I'm a CBer as well as an ARO. As a matter of fact, mother nature's natural amplifier, the ionosphere, teamed up with my first SSB rig to spark my interest in worldwide hobby comms. AR was just the natural progression of that. I remain somewhat active on the CB because what better way to help the CB than stay active and help others NOT to operate like lids. There are plenty of hams like me who got started on the CB but immediately develop 11-meter amnesia and vocally trash the "chicken band" upon getting their Tech "plus" or above. There are folks on both sides of the fence that just don't realize that there really needn't be a fence. The two go along just fine if you're willing to accept some truths that come to light along the path of learning.

Wanna run "extra channels?" Fine, do so but do so at your own risk. The risk IS minimal but the consequences smart to the tune of kilobuck fines if one gets caught. The risk of getting caught skyrockets once you pass the 28.0000 MHz line of demarcation. Nuff said. (No $hit.)

Once we get our Tech "plus" tickets and above, a sense of value for some priviliges earned comes into play. I can't hop on 27.5000 MHz and chit-chat with my old friends like I used to because, no matter how small the risk, I put my priviliges at risk. (Hey, I worked to get 'em, albeit not so hard.) But now I get to hop on 28.5000 MHz and

chit-chat at approx. 100 watts without even so much as a worry about getting caught for anything. If I can get some of the old gang to pass a easy 5-wpm code test and a total of 70 multiple guess...er, choice questions, then I've been the truer friend.

I don't judge anybody who "freebands" and/or runs reasonably moderate power (30 watts or so) and I catch a fair amount of $hit from the FCC Jr. agant wanna-bees for this approach. So be it, that's the real world. If I tell you not to hop on 10 w/o a license, it's not because I'm trying to bust chops. It's because I care. I made a decision that I would trade the risky 0.5949 kHz freeband (27.4051 MHz - 27.9999 MHz) in for a 1.7 MHz wide "risk-free"band on 10-meters. All it took was a really easy 5-wpm and two multi-choice exams for which the answers are published.

Is 10-meters any good? Think of it as what the 11-meter "freeband" used to be...wide open and a place where good professional sounding ops went to escape the overcrowded legal 40. I believe that I've heard a familiar voice or two on 28.440 MHz. ;-) Take it easy.

Channel 6 has been like that since the early 70's. Do you want to know
the pisser They all aren't Black. I used to know a guy in Havre de
grace MD Screwball A.K.A. David Oliver.He could nigger with the best
of them and he is white as snow. So Channel 6 is just channel 6. You
can't do anything about Channel 6 A.K.A. Superbowl Ther is skip on
that channel when there is no skip anywhere else. F.C.C. can't do
anything about it! So what makes you think that you can? I would
sujest giving it up and move to another channel!
Oris

The Navaho radio that you are looking for is the TRC-458. Yes it had
sideband and it could be modified to go up into the 10 meter ham band.
It is a good radio I still have one.
The reasonn why these great radios are out of production is the
fact that the F.C.C. is trying to phase out illeagal operation. They
have the technology to do that now. All the new Radio Shack radios
can't be modified to go out of band. What they have done is put the
whole radio in one chip except for a few coils and the finals.
Illeagal operation is reason for alot of the changes. Marketing is
another reason for this. The consumer is always looking for new p
Hygain used to make the ultimate in pirate CB radios They had
matching VFOs (Sliders) and amplifiers (leanyours). That was back in
the early 70's. Palamar skipper 300 was a good amp of the 70's and
early 80's. The Tram D-201 The browning Golden Eagle. After all that
there are still good radios on the market today Galaxy Cherokee and
others. The F.C.C. has not won yet!
Oris
I am A firm beleiver in the 100% Amatuer Radio anexation of the
11-meter band!

Ron,
Not all hams in this NG give you 'grief', far
from it, in fact.
There is no reason a person can't be both a
CB'er and a ham. There are quite a few who are
both, and I can't really see why it should make
a lot of difference to anyone. You seem to be
throwing the 'baby out with the dishwater', and
that makes no sense. But, if that's how you feel,
then that's how you feel. I'm certainly not going
to try to change your mind. It isn't me you're
harming, it's your self...
'Doc

In other words he condones their illegal activities. Then he's not truly a ham operator. REAL ham operators uphold the promise they make when they sign their license. Part of the promise is to follow ALL FCC rules and regulations. Another part is to encourage others to do the same and to report those who are not.

Three Hillbillies are sitting on a porch shootin' the breeze.

1st Hillbilly: "My wife sure is stupid!...She bought an air conditioner."

2nd Hillbilly: "Why is that stupid?"

1st Hillbilly: "We ain't got no 'lectricity!"

2nd Hillbilly: "That's nothin'! My wife is so stupid, she bought one of them new fangled warshin' machines!"

1st Hillbilly: "Why is that so stupid?"

2nd Hillbilly: "Cause we ain't got no plummin'!"

3rd Hillbilly : "That ain't nuthin'! My wife is dumber than both yer wifes put together!...I was going through her purse the other day lookin' fer
some change, and I found 6 condoms in there."

1st and 2nd Hillbillies: "Well what's so dumb about that?"

3rd Hillbilly: "She ain't got no pecker!!!"

Yes or no? Do you stand by your statement that extra power on MURS
will not help your communications?

>
> No... but, the fact remains - you are a data bigot.
>
> - Stewart

Now Stew. Why on earth would you label someone a bigot in relations
to a view on MURS radio? Resorting to this type of verbal abuse is a
sign of a weak mind. You assume I am against MURS. You could not be
farther from the truth! I intend to jump into MURS when the MURS
specific radios hit the market in sufficient numbers to cause price
competition. As for the "bigot" statement...It is REAL easy to use
such "slurs" when one HIDES behind a keyboard.

Good day, Ray.
It's also illegal for them to talk to us on the cb bands (with hammie rigs) but it's being done. The difference is, most cbers will usually and gladly talk to anyone who keys up. CB doesn't retain the water amateur radio does.....nothing a good dose of diuretics couldn't handle.

Generally speaking, 12 volts. As others have noted, there are a few which are different. I have seen a couple of trucks that have a POSITIVE ground. Undoubtedly, he has a negative ground by the color of the wire. Also very likely that it is 12 volts. Not a bad idea just to check and make sure there is an in-line fuse to boot. BTW, sometimes regulators fail. Ever seen a radio that was on when the voltage went up real high?

>Hi Ron,
After reading (and re-reading) your post, I'm reminded about the old story about the cow that $hit on the cold bird to warm him up and the cat that pulled him from the $hit to eat him. The moral being that not everybody that $hits on you is your enemy and not everybody who gets you outta some $hit is your friend. I personally don't think that I've given anyone on r.r.cb much $hit, but I will tell you the truth. (Although I'll not repeat it ad nauseum.)
I'm on r.r.cb because I'm a CBer as well as an ARO. As a matter of fact, mother nature's natural amplifier, the ionosphere, teamed up with my first SSB rig to spark my interest in worldwide hobby comms. AR was just the natural progression of that. I remain somewhat active on the CB because what better way to help the CB than stay active and help others NOT to operate like lids. There are plenty of hams like me who got started on the CB but immediately develop 11-meter amnesia and vocally trash the "chicken band" upon getting their Tech "plus" or above. There are folks on both sides of the fence that just don't realize that there really needn't be a fence. The two go along just fine if you're willing to accept some truths that come to light along the path of learning. Wanna run "extra channels?" Fine, do so but do so at your own risk. The risk IS minimal but the consequences smart to the tune of kilobuck fines if one gets caught. The risk of getting caught skyrockets once you pass the 28.0000 MHz line of demarcation. Nuff said. (No $hit.)
Once we get our Tech "plus" tickets and above, a sense of value for some priviliges earned comes into play. I can't hop on 27.5000 MHz and chit-chat with my old friends like I used to because, no matter how small the risk, I put my priviliges at risk.<<

Very true. This is more prevalent than some may care to acknowledge and in many cases is the sole reason for certain bizarre behavior from angry, disenchanted hammies. Some even let the ticket expire and never look back for this very reason. An extreme minority for sure, but a ripple that has far-reaching consequences, no less.

> (Hey, I worked to get 'em, albeit not so hard.) But now I get to hop on 28.5000 MHz and chit-chat at approx. 100 watts without even so much as a worry about getting caught for anything. If I can get some of the old gang to pass a easy 5-wpm code test and a total of 70 multiple guess...er, choice questions, then I've been the truer friend.<<

I am assuming this would be after they expressed a desire to do as much. Certainly a chap of your stature would not foster an unsolicited goal on another after the opposite was recognized.

>I don't judge anybody who "freebands" and/or runs reasonably moderate power (30 watts or so) and I catch a fair amount of $hit from the FCC Jr. agant wanna-bees for this approach.<<

As do we all. So what? They mean about as much as the financial news in Uganda.
What intrigues me are the various opinions of what constitutes "reasonable" power.

> So be it, that's the real world. If I tell you not to hop on 10 w/o a license, it's not because I'm trying to bust chops. It's because I care.<<

This doesn't even need be addressed.
Those who have invested time and money into a quality station are not the same few the hammies cry about and they certainly don't visit this forum, for the most part. They are almost all truckers who have no clue they are on ten meter...even if they did, it's not our problem and is brought to attention here only by the angry few. Have you not noticed now the DX is fading they now must whine about imaginary intruders on MURS with huge wattage being spewed?
The crystal ball is now put away until the next DX cycle.

> I made a decision that I would trade the risky 0.5949 kHz freeband (27.4051 MHz - 27.9999 MHz) in for a 1.7 MHz wide "risk-free"band on 10-meters. All it took was a really easy 5-wpm and two multi-choice exams for which the answers are published.
Is 10-meters any good? Think of it as what the 11-meter "freeband" used to be...wide open and a place where good professional sounding ops went to escape the overcrowded legal 40. I believe that I've heard a familiar voice or two on 28.440 MHz. ;-) Take it easy.
73 de Bert
WA2SI
SSB-411D (If some prefer) <<

You can also hear some familiar voices on 6, 38 LSB, 39 LSB, 27.555, 27.425 USB, 27.430 USB, 87.5 FM, ..and...a buncha others. There are some cool pirate sites out there giving both sides of the story and leaving the virtue decision to the reader.

Ron,
        Not all hams in this NG give you 'grief', far
from it, in fact.
        There is no reason a person can't be both a
CB'er and a ham. There are quite a few who are both, and I can't really
see why it should make a lot of difference to anyone. You seem to be
throwing the 'baby out with the dishwater', and that makes no sense.
But, if that's how you feel, then that's how you feel. I'm certainly not
going to try to change your mind. It isn't me you're harming, it's your
self...
                                        'Doc<<

This is correct, Ron. Most hammies here are ok folk. Certain wolves
wearing sheep's clothing acting as the welcome wagon you must watch.

In other words he condones their illegal activities. Then he's not truly
a ham operator. REAL ham <<

Man, I just love watching your type elevate yourselves to that of
dictator of what constitutes
a (cough cough) REAL hammie.

>operators uphold the promise they make when they sign their license.
Part of the promise is to follow ALL FCC rules and regulations. Another
part is to encourage others to do the same and to report those who are
not.
Kevin, WB5RUE <<

Yea, well report me. I freeband daily, have for years and years, and
talk to hammies that have been around quite longer than yourself...all
on the freeband.

1601. Rat Shack - NEED Mica Insulators

Newsgroup: rec.radio.cb
Date: 2002-06-13 16:08:54 UTC
From: Power House <Power_House@PrivateBox.com>
Message-ID: <ughgvrq8to9i01@corp.supernews.com>
Source record: 127503

Stopped in today. Usual Situation.. Clueless.... Local store has a manager that proudly displays "3 Years of Service" on his name tag. Manager after only 3 years?
Must have quite the turn-over rate!

Anyway... Looking for some mica insulators for TO-220 transistors. "I have NO idea. If they aren't hanging up over there by the transistors, where you were looking, then we don't have them." Thanks a lot!

Another useless trip.

Does anybody have some TO-220 mica insulators they can sell me cheap? Where do you find these things without having to buy hundreds of them? Anybody have some laying around? I'll send you a stamped envelope, and whatever you want for them (within reason). All I need is two (2).

Thanks,
PH

I ordered the Mirage 10/12 meter 2950. No, I had no intention on using it for CB operations. They, Copper made the presumption that I was a CB'er and wanted it for that purpose. The radio works just fine on 10 meters with a mag mounted roof top antenna. What I have to do is re do the mod they did to get back to 10/12 meters as I would have like it when I bought it. When they did the mod if cut out 10 meter FM, plus a few other options the radio has that just doesn't work now.

I get into europe when the band is open and have have talked to several countries, legally from my vehicle. Nice rig, it just doesn't have the power to get over the big guys but that's ok.

Mayor wrote:

Do yourself a favor. Instead of just going for optimum gain why don't you also consider adding practicality to the equation.

You don't need both directional antennas phased together. This adds little gain. What it does add is future headaches in keeping the whole array in the air. It also complicates the installation without any real gain to speak of.

Pick one of the beams and sell the other. Mount the two remaining antennas separately. You can then mount them higher and they will be much easier to maintain over time.

Cookoo! Cookoo!

Yes, I know, Randy - it's Two O'Clock

Now, will you try to come back to Earth and read what I actually write, instead of making things up in your brain... go back to the original statement(which you've attempted to WARP into something else)... that "The use of External Power Amplifiers provides virtually no benefit on MURS and GMRS".

I'll tell you what - you can also quote me on this one: "The use of Mobile Radios is not a significant cause of interference on MURS".

But, now, try to use and understand MY WORDS and MY POSITION on the issues - not some words you've made up in your own head that you THINK represent my position.

The other answer (reply to your post) was excellent. Don't try to co-phase the two. Messy, indeed. You might want to consider a good vertical for the local communications as I suspect your yagi is mounted horizontally. For good local (especially mobile contacts that are often moving around), keep a good omni vertical. Up high, on one tower, this will give you good results. Cross-polarization (using the horizontal yagi) to talk to a mobile nets a 20 dB loss (which the yagi cannot possibly make up for in gain). Use the yagi (or quad) for the skip and use a good vertical mounted high for locals. In fact, since you have two towers, put a good vertical up on one and switch between the two on any station 20 miles away or less. My bet is that the vertical will outperform the yagi by a large margin (assuming the other station is vertically polarized - which mobiles will be). Once that is proven, simply use the vertical for local contacts and the yagi for others. Bear in mind that the correct polarization will aid your reception as well as transmission to the other station.

Tim, I seriously doubt even in a category 5 storm, that the KPRC or FOX towers in Stafford will go down. What I do know though, is that you will have no power to run anything without a generator, and chasing ice to keep the beer cold will take up so much of your time that you wont have any to spend chatting on 11 meters. On the other hand, if we ever get a category 5 here, make sure you take the tent with you when you leave, cuz there wont be anything here to come back to. We'll have a clean slate.

Forgive the top post.

I think you hit upon one of the reasons CB radio was intended as a
low-power, short-range radio service, and not intended for skip. If he
wants to talk skip, tell him to spend a few bucks and get a license.
Then he can use a dozen or so bands spread around the EM spectrum,
many of which are larger than the Citizen's Band, and not restricted
to 40 channels or local comm.

As far as the best band for skip, "gold is where you find it".

I am going to echo what others have said. Putting the two on a common mast is both a mechanical and electrical nitemare that more than likely would not work worth squat and come down in the next good wind. Having one's antennas condemned by both the building inspector and the urban renewal authority is just ignominious so let us stick to the electrical aspects.

One puts up beam antennas for two good reasons: concentration of transmitted signal and rejection of unwanted received signals -- the two sort of go together but you can trade one for the other to some extent. Now rookies tend to get fixated on forward gain- the amp tends to confirm this picture-and you are no exception. Not being critical, just realistic. If communication is the issue as opposed to juvenile swagger you will find the receive rejection is more important than the antenna gain. This will vary a bit depending on where you live but out here in fly-over country we tune for rejection because we are one hop further than the coasts to anywhere. We talk of 2-4-6 filters, New Jersey, Florida, California. The DXers Axiom: you can't work what you can't hear, applies with a vengeance.

Of the two the PDL is by far the superior antenna under most conditions you are likely to encounter and is still a favorite among 10-meter amateurs where the sheer size of the things on say 20 meters is not a problem. There will always be cases where the best antenna is a loaded coat hanger on the ground but these are few and far between; it's a numbers game. Now before you haul out spec sheets, realize that yagis can be deader than Jimmy Hoffa straight back but have major lobes say 20 degrees off-center that will defeat the effort. The PDL style while perhaps not as good on the spec sheet is pretty consistent in all rear and side cases. People who wish to find more than they cared to know about design of 3-element yagis are referred to http://www.cebik.com.

So I would put up the PDL on one tower and a good 5/8 on the other. Having one non-directional antenna is a must if you are not going to waste

a lot of time wearing out a rotor. While I am generally not a 5/8 fan they will do a better job of staying out of neighbors' electronics than the usual trick sticks.

And on CB which does have polarization effects locally, the ability to swap vertical vs horizontal is a big plus.

As far as co-phasing, forget you ever heard the word.

When dealing with antennas, mechanical stability is well worth the investment. Some good marine pipe clamps or stainless sheet metal screws, conductive compound in the joints, and real attention to weatherproofing pay big dividends. And watch the verstunken power lines, please.

When I see what some people are paying for those "10 Meter rigs" it makes me
wonder. Many of the single band sets advertised on here go for $400 bucks
used.
A little careful shopping will getcha a TS50, an Alinco DX70TH, or an Icom
706 for $500 or even less. I've seen 706s for $475. When you consider that
you are really getting an all-band HF rig, a 6 meter rig, an aircraft
receiver, a
general coverage HF receiver, a 2 meter rig, and a scanner, it's like
getting 6 rigs
all in one! And I will most likely never buy the highest dollar rig on the
market--I
don't need a Cadillac when a Chevrolet will do just as well.

Of course it's WAY too late now, but if they wanted to set aside a portion of spectrum for low-power, short-distance comm's, they couldn't have picked much worse than the 27 MHz region, which is typically DX-rich during most of the average solar cycle.
It was very short-sighted of the FCC to not only pick this region, but THEN try to put distance limits on comm's in that same region. Pretty silly.

LET ME FIRST START BY SAYING THAT I AM A HAM,{GENARAL}BUT I ALSO RUN 11 METERS.JERRY IS RIGHT,STAY OFF 10 AND 12 METERS AND WE CAN LITERALLY "FREEBAND" WITHOUT ANY PROBLEM WITH THE FCC.I TALKED TO MR. HOLLINGSWORTH AT THE ALTLANTA HAM FEST AND ASKED HIM ABOUT 11 METERS,HE SAID"WE ARE SORRTTA LOOKING THE OTHER WAY AT FREEBANDING RIGHT NOW,THERE ARE TOO MANY OPERATORS,TOO MANY RADIO IMPORTERS,ETC . FOR US TO GET A HANDLE ON THIS PROBLEM". BUT WE ARE GOING TO START AN AGGRESSIVE CAMPAIN TO GET "BOOTLEGGERS","FREEBANDERS", OF THE 10 AND 12 METER BANDS.STAY BETWEEN 26.000 AND 27.999 AND THERE IS NO PROBLEM GUYS,THAT IS ALOT OF SPACE!!!!! BUT JERRY IS RIGHT,DON'T TAKE OUR WORD FOR IT,SOMETHING IS IN THE WORKS TO "CRACK " DOWN ON ILLEGALS ON 10 AND 12,YES,YES,I KNOW IT WILL TAKE A WHILE AND IT, {THE BUST'S} MAY BE FAR AND FEW BETWEEN,BUT IT IS GOING TPO START HAPPENING.THEY ARE GOING TO MAKE EXAMPLES OUT OF ALOT OF PEOPLE IN FEDERAL COUT FOR THIS SORT OF ILLEGAL ACTIVITY,HEAVY FINES,JAIL TIME,ETC.I AM SAYING THIS FROM A "FREEBANDER" POINT OF VIEW,NOT A HAM POINT OF VIEW.HEED THE WARNING GUYS, LETS HAVE FUN !!!!!! OPERATE ON 26-28 MC. BUT STAY OFF THE 10 AND 12 METER BANDS !!!!I DON'T WANT TO SEE ANYONE GET BUSTED !!!!!I HAVE BEEN ON FOR 16 YEARS,AND YES ,THE "HELL" WITH THE "I AM BETTER THAN YOU HAM'S"BUTS LET'S BE SMART ABOUT IT.HAVE FUN,RUN DX,USE "ALOT OF POWER ON 11,{I DO} , BUT STAY WHERE THE FCC TURNS A BLIND EYE.TALK TO EVERYONE SOON{I HOPE}I LOVE THIS COUNTRY,BUT DON'T BE FOOLISH AND GIVE THE FCC MORE MONEY BY WAY OF GETTING BUSTED,JUST PAY TAXES AND HAVE A GOOD LIFE.JUST MY .00000000000000000000000000002 CENTS WORTH !!!!! GOD BLESS THE U.S.A. !!!!!!!!!!

Hi, Jerry. Yeah, even some of the HF only rigs go for some very good prices. The Icom IC-718 can be had for $600 or less...No FM, though. Won't be doing any repeater work on it :-(The Yaesu FT-840 for around $650 WITH the FM module. Not too expensive considering there is an RCI rig that goes for $500 or more (RCI 2995DX). To each his/her own, though.

CB was designed to relieve pressure on business band and to provide the service at prices much lower than the Motorola coffin boxes of the vintage. As an experiment in giving people communication as opposed to preventing it as is and was the case in a number of countries, the FCC has nothing to apologize for.

At the time, the FCC was ass-deep in alligators. TV was frozen because they had done line-of-sight calculations that turned out to be really pessimistic, biz and public safety was done on 50 or 60 kHz channel spacing, there was no spectrum to give that made any sense. That is why all of Indiana, Illinois outside of Chicago, and non-metro Ohio are on UHF TV today. FM channels were split so that what was 50 kHz splits on UHF are now 12.5 and we don't get it by running VHF sigs thru varactor tripplers. Life was a whole lot different 50 years ago.

It was not done by their best people to be sure as shown by assigning call signs that violated the treaties. The distance limit was not their idea, it is a function of the treaties; some countries do not allow base stations at all.

The experiment failed miserably but asking them to predict the 1973 fuel crisis and Convoy is expecting a bit much. In 1956 or so transistors were new.

I suppose one should also take into account that some folks joining
the ham ranks might just have one of these rigs "on-hand" already. If
so, then by all means, use it.

Jerry, I simply must ask you; have you ever used one of these or QSO'd
(knowingly) with someone who was using one? I've used the Uniden
HR-2510 on 10-meters and have never received a poor RST report. I've
also heard folks on 10 using the Magnum 257 (A slightly more robust
version of the Radio Shack HTX-10.) and they sounded fine on the air.
Type of rig does not equal operating practice.

> > And besides, when I have

Agreed, but let's not forget those who come to the table with a $200
10-meter rig. (Or in the case of the HTX-10, $150.)

Perhaps this can help.

Definition of the SuperBowl
If 10,000 CB'er's are on the SuperBowl
then only 1000 can be heard some of the times
& only 100 can be heard most of the times
& only 10 can be heard all the time
This is a great example why the bowl is not for the weak!

Let's set the record straight.

Some Citizen Band people being un-licensed and un-regulated think they can just move into ANY band or on frequency they damn well
chose and play their games.

Sooner or later and it's my belief "later", the FCC - Big Brother will pounce down on them with both BIG feet. The unfortunate
part is it's been way toooooo long for action.

I am strictly talking about the ones with big mouths who do as they damn well please without regard to any regulations.

For the most part CB people are no different than any other radio people, it's the ass holes that make them look bad.

Have a nice day from a REAL Old Timer.

Pappy
20Q2036 - My first CB license

PS: Against my normal policy I left the cross posting in place.

While going across town today I saw an
unusual setup. It was a pick up truck with a
roll bar, antenna on the roll bar. But the thing
that was different was the top with ceramic
isolators coming up from the roll bar, then a
flat metal bar across the top of the roll bar
with the antenna in the middle.
Why would he want to isolate the roll bar?
Any theories?

From: jr127@world.net
>Let's set the record straight.<<

Ok, you can certainly try, but try to present both sides of a balanced equation.

>Some Citizen Band people being un-licensed and un-regulated think they can just move into ANY band or on frequency they damn well chose and play their games.<<

As do some hammies. They think they are above the law in lieu of their license. Some even play both sides...literally.

>Sooner or later and it's my belief "later", the FCC - Big Brother will pounce down on them with both BIG feet. The unfortunate part is it's been way toooooo long for action.<<

The hammies are way more troublesome than cbers...the FCC logs reflect as much..in other words allocations for enforcement would be directed toward cbers instead of hammies, but the money follows the steered direction of the feds.

>I am strictly talking about the ones with big mouths who do as they damn well please without regard to any regulations.<<

Ditto.

>For the most part CB people are no different than any other radio people, it's the ass holes that make them look bad.<<

Same with most hammies I have encountered. This group had proved some exceptions.

I don't think it is a stretch or a misunderstanding of your words "The
use of External Power Amplifiers profides virtually no benefit on MURS
and GMRS" to state that your position is extra power on MURS will not
help your communications. The "benefit of MURS and GMRS is
communications. Amplifiers DO help with communications. If it didn't
everyone would be using 1/2 watt radios in EVERY radio service. I
would like you to answer this: Are you saying that extra power does
not help your communications capabilities?

>
> Definition of a bigot: A person who holds blindly and intolerantly to
> a particular opinion.

I don't know where you get your definitions, but the definition my
dictionary has for bigot is:

bigï¿½ot
n.
One who is strongly partial to one's own group, religion, race, or
politics and is intolerant of those who differ.

The inplication of "intolerant of those who differ" would be those who
differ to his/her group, religion, race, or politics.

Those who are losing the arguement will resort to slurs such as
"bigot".

I am a great fan of ATT. The service has been flawless unless I catch
their 4AM mail maintence.
I especially like being able to use a simple front-end screen to blow the
Korean crap cleanly out of the water in one swell foop.

I had Earthlink and wouldn't wish it on my worst enemy.

About the only semi-decent guess I can make is that he may be using an antenna that assumes it is to be mounted on a truck mirror and is trying to re-create the conditions.

More likely it is a hold-over from something else or Red the Tech at Happy Larry's Truck Stop, Funeral Parlor, and Emporium of CB Delights found a box of ceramic insulators and is unloading them on the sheep along with some surplus mirror antennas.

Skippy,

Where did I say it didn't "meet FCC requirements"? There are
thousands of linear designs (albiet mostly UHF/VHF that use
4CX250s). I only pointed out
that as far as IMD performance, there are much better ceramic
tubes available than the 4CX250.

Enlighten us.

73

Hi Richard,
But I would think that it would make a really
strange pattern, because it isn't going to be
grounded to the rest of the truck very well.
Now picture a roll bar, three holes for lights
or what ever on the top of the bar. Now put
isolators on the last two holes, flat bar going
across the top of the isolators, antenna mounted
in the middle of the flat bar. It just would seem
to me, to be not to well suited for an antenna,
but that's why I threw this out to the group.

Actually George/XXXXX,
I answer questions that I want via e-mail, just
because of this type of response from you. I'm
not a fortune teller like you, so I couldn't possible
see this persons antenna set up until yesterday,
so thus the question was put forth today.
But as the troll you are, you haven't put forth
a reason that this person has done this type of
antenna set up, so all must assume you are only trolling.
Have fun at home pounding on the keyboard, I have
taken the rest of the day off, and only came home to
change so I can go out riding

I didn't say it was a GOOD idea; my feeling is about the same as yours. Even mounting it to the roll bar has its bad points.

You might find that the insulators have a bolt running thru them and the whole thing is continuous. He might just want to be able to spin the nuts and put a lite bar up when he is out in the swamps. For all we know he thinks the insulators look studly, found them in his junk drawer, or stole a couple of overpriced pulls from someones drapery (it's a good thing). Mind reading is not my calling in life.

I have seen some antennas mounted with what amounted to C-clamps on the roll bar comparable to the mirror mounts that are welded to Vise-Grips.

If the insulators actually insulate it is basically stupeed; if they don't he just raised the feedpoint impedence a tad and introduced some resistance into the equation but didn't do a lot of harm once you get by mounting it to a roll bar at all.

And some antennas, the Firestick for one, are not the most efficient radiator but do work admirably with crappy grounds like mirrors. But for this purpose it would seem something like a marine antenna would be needed.

And like a guy with a super-sexy S-10 I noticed, there might be no coax on the twinset. Dual CB antennas are de rigeur for the well-dressed super-stud.

Understand? I guess it went right over your twisted head. I was, and still am, a CBer long before I was, and still am, a ham. Too complicated for you? In other words I became active in CB three years before I became a licensed ham operator. Still too complicated? In other words I've been a CBer longer than many people on this newsgroup could say CB. Back when CB was operated by people who were civilized and polite. Back when it wasn't the size of your amp that counted, back when it was the caliber of the person operating the radio. Days long gone.

Kevin, WB5RUE
CBer since 1972
Ham since 1975

There, maybe that's simple enough for even you to understand; even with testicular torsion.

I am a former truck driver and I know why they hate them so much. LOL the extension speaker is mounted right above the drivers left ear. Morimoto is correct. The noise coming from a roger beep through a 25 watt EXT. Speaker is just about enough to make the driver pull over and claw that speaker out of the ceiling of his rig!

There is also a technical reason for it. The beeps are made with
circuits, like logic chips, that generate some really obnoxious
square-wave audio that has all the melodic quality of a Holstein
scratching her butt on a steel shed.

Put that thru a decent speaker and your teeth and sinuses will hurt.

Dick NBK

Well then Randy, how do you justify
the amount of responses to me, it's not my
turn in the rotation.

Landshark

--
If you are implying that people, who
hold ham licenses, should be somehow
held to a higher moral standard than
the "common man", then that would
be faulty logic. A ham license is only
a "permit" to use radio, it is not a
"badge of morality".

I doubt it, it would be foolish
to isolate the antenna from the mass
of the truck.
It's probably more along the lines
of what Mopar said about shielding
his stereo, from what I don't know,
but he thinks it works better.

How do you know the bolts arent touching the flat metal that the antenna is
attachd to,
and grounded to roll bar, the isolators or whatever they actually are could
just be inbetween and the bolt provides the ground.

i have. give a listen for Kp270 Mr Denny. he runs usb on the freeband and usually calls on 555 and switches to 580. he has a kick ass sounding kenwood in the big rig and actually has the option to switch from vertical to horizontal from right there in the cab. he's all up and down the east coast and out there everyday so i'm sure some of you have already talked to him before.

Good question, you will have to ask him and not the NG we are all only guessing why
someone would mount it as they did. Tnom may be right he doesnt know any better.
Maybe the antenna is just there for looks many 4 wd guys do this. Ask him and get back to us.

Hey Tim,

I just put a NOS NIB SSB+2 into service. Funny thing is how age just doesn't seem to deteriorate the sound of these great mics. I figured that components would dry out and such, but I wired her up and kaboom went the audio. The only age affected part of the mic is the satin black paint on the front grill. It flakes off after 25 years in the box, but the blue paint in new and shiny.

So was mine until I rubbed a bit too hard while giving it a cleaning. The front grilles are riveted in so it's kinda hard to correct other than touch-up painting.

>my favorite +
>2 i own though is the one i've repainted a real pretty looking blue. it

hey Fag Boy any time you would like to have a technical go round with me, go for it. Your asking the NG to assume why someone that you nor anyone else from this NG knows, why he has a antenna on a roll bar mounted the way he does. Pure speculation on your part and a poor question to pose to the NG. The only answer you will get are opinions, he may have the antenna on there for looks and not even run a cb, he may have had a ground wire attached etc.If you studied his antenna set up a 2 red lights and were that close to him to see every last detail why not ask the person directly. Talk about looking foolish, your question is like hey I was driving down the road and saw a guy wearing a blue shirt, why did that guy where that blue shirt today. No one has a clue it could be his uniform for work, he may like the color , he may be color blind.

We all know the reason you posed the question it is because you were called to task on your troll behaviour you accuse others of being trolls yet your posts are nothing more than the same. As noted your infatuation with me will never cease, and of course being the bone smuggler you are you will never win with me. Right Frenchy

Date: 1999/06/25

Hi all....

This is a NO BS NO SCAM DEAL....AND IT IS FOR HAMS ONLY!

My company is 20 years old and we sell computer parts and Microsoft
products at
wholesale to re-sellers. There is an even chance you have a product
from Amax
if you patronize your local computer shop.

I am a salesman for Amax and I am offering to sell either built
systems or
components to hams at the price we sell them in quantity 50 lots to
resellers.
This is for real, and so am I.
I am offering this not to make money but as a way to repay the ham community for
the TONS

of help I have gotten since I got in this hobby.

Go to www.amax.com and check out the stuff there....

Then call me in the Chicago office at 888-810-2629. I am at extension
106.

Our Illinois location has some pricing at
http://people.ce.mediaone.net/amaxil
but it is kinda old pricing. You can call me for deals, but an email
to
Doug_Adair@amax.com is best.

73 and CU ON 6 METERS!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

Doug N8WWM

A couple of possibilities I can think of.

1. The owner could be trying to isolate the antenna from the body of the truck to reduce RFI to his stereo.
2. The owner could be going for a capacitive ground to the vehicle to help broadband the antenna. This would, in effect, cause the antenna to act as a dipole, with a shortened "ground" side, while still allowing coupling to the vehicle body for a more omnidirectional signal.
3. The owner could be trying to get people to say "What in the HELL is that?"
4. The owner might not have wanted to drill holes in his lightbar, so he used the existing holes for the lights to mount his standoff bar to mount his antennas to. If the "insulators" are bolted thru completely from the lightbar to the flatbar the antennas are on, the ground is all the same.

Just my thoughts.

Bert,
CDL's haven't been issued for that long. I was thinking you are older than
that! In the days when I went to college, NJ had a regular and an articulated
with no class "B". CDL's were federally required as of the late 90's or so.

Hi Brian,

I held a NYS class III with a hazmat endorsement. When renewing my license, I had the choice of dropping it or converting to the new CDL. I'd long since stopped driving, but I chose to keep the CDL. It serves as a reminder of some very tough times and puts my current woes (If you can call them that.) into perspective. Take it easy. :-)

I still run OTR J.P. and when i was green i thought the R/B was cool,
but as most drivers mature they stop using it or change to a programable
noise toy.
At close range (within 5 miles) you and i are able to realize when a person
has stopped talking , Beep......
The majority of us stay on the road for weeks at a time driving 600+ miles
per day, transferring freight from one state to another 6 or 7 days a week
guiding 80,000 lbs. of rolling steel thru every kind of navigable terrain
while dealing with adverse weather conditions ,jackass 4wheelers, CB
rambo's, overpriced restuarants with truck parking, the D.O.T.
Trust me ,the last thing you wanna hear is a loud beep at the end of a
transmission, especially if the driver is a motormouth and just cant
shut-up.
I try to be polite and ask them if they would kindly switch it off.
Being polite to everyone all the time is a great challenge for us.
Sorry for runnin my pie-hole so long neighbor.........Beep

That's not a sporting event, it's too quick, shucks, a trailer circles you 2 or
3 times before it takes you out. ;-)
Your not a good truck driver until you have the dirty side up once or twice,
then you are an expert, a very cautious expert.

I had one a while ago and I would say that if it was a lot heaver it would make a good boat anchor. The radio got hot to touch after only a minute or two on transmit and the finals blew in about 6 months. The antenna mag-mount was not water proof and left rust stains on the paint job of my car. The antenna was a telescopic solid antenna with no give to it and would brake if you tried to drive down the road with it at highway speeds. Leave it on the shelf and put in a more permanent mobile instillation. A sub-compact Radio shack CB with a proper mag-mount whip and a cigarette lighter plug will do better and last longer that thing.

There are a couple of excellent responses already in the thread. The problem with a handheld is that the antenna is EXTREMELY short to give a good account of itself and the ground it works against is virtually nil. Fed into a better antenna (such as a mag mount on a vehicle), it will do much better; however, you still have to understand that to put out 5 watts, it will be inputting perhaps 8. The other three watts become heat. 3 watts doesn't sound like much, but there is very little in the way of a heatsink to dissipate the heat (hence, the handheld will get quite warm with much transmit time - which isn't good for the final). Don't plan on using it on the whip from inside the car. The net result is about a 10 to 20 dB attenuation and your effective radiated power will be measured in milliwatts. FRS antennas are much more effective due to the short wavelength involved. They will likely give you as much or more range as a 5 watt 27 MHz handheld in the daytime.

During Alicia, antenna damage was hit and miss. Those that were well maintained sustained little or no damage. On the other hand, some installations totally failed. The local police station is a case in point. The guyed tower failed, and crashed through the roof. Where I work, our 140', free standing tower survived with no damage. That includes all the 2 gig microwave antennas on it, and the low band VHF folded dipoles. Most commercial antennas will survive substantially greater wind loads than will antennas designed for the general public. The repeater antennas that are allowed on the TV towers around here are commercial antennas. The site owners don't allow garbage on the towers, nor do they allow antennas to be installed by Joe-blow amateur. Working 2000' above the ground is no place for laymen.

If you ever get the chance to visit the sites in Stafford, jump on it. You will be in awe. It was amazing to me to see guy wire that is thicker than your wrist, much of it 3" diameter. One of the towers even has an elevator and building on the platform at the top.

On a personal note, having stayed through Alicia, I made a decision at AM that night. When things were getting strange, and the walls were breathing, I decided I'd never stay through another category 2 or worse. Alicia was a low-end cat 3, with sustained 115 MPH winds, and gusts to 130. We took the brunt of it here, being just on the northeast eye wall(dirty side). I've

stayed through lesser storms since, including Jerry and Chantal, with winds around 100 MPH. As wind speed increases, the forces increase exponentially. There is LOT of difference in wind loads between 100 MPH and 115-130 MPH. Regardless of what the female name my imply, Alicia was no lady. She impressed me for life. Staying or leaving is a personal decision, and if/when you decide you should have left, it's too late. All you can do is listen to the howl and wonder what the objects are that just bounced off the structure that you are in. Then there are the mini-tornados that are contained in tropical systems. You can't hear them or see them, and even if you could, you couldn't leave or get out of the way.

When you see pictures or video on TV of hurricanes, do not let them fool you. Believe me, they do not do them justice. The intensity is much greater than can be captured on film, and in most cases, what you are seeing is not a good case of what the conditions in the eye wall are like. Even the reporters that capture these pictures know not to try to capture that...it's a self-preservation thing. Carla, in 1961 was a much larger and stronger storm than Alicia. She also did not hit here directly. She hit 150 miles down the coast. Check the tracks on any database. Still though, there was a lot of damage here, mostly due to flood waters. The winds here were in the 100 MPH range, which is nothing compared to Alicia's winds in this area. What caused the damage here during Carla was the time it took her to pass through the area. Had Alicia lingered like Carla, many more structures would have failed. The height of Alicia was around 3 AM, and by 7 AM, the sun was coming out and you could walk around outside, even though the winds were still tropical storm strength. Carla took almost a full day to pass, due to sheer size and slow speed.

Anyway Tim, sorry about the rant. One thing though, don't do what I did and make the macho/dumb decision. If/when we do get a really severe storm here, take the advice of the forecasters and move inland.

Take care,
Me

1752. 6.5 meter: end of an era? :-(

Looks like the sun is setting on the age of the 49-MHz jammable junk-phone. Apparently the caller-dummies are 1) taking my advice and buying 900 MHz phones, or 2) their old 49's are biting the dust and ending up in the trash.

Damn, it was so much fun to mess with callers' minds on Friday & Saturday nights, when so many were on the phone stoned or drunk. Ah well, I can still build me a 900 MHz phone jammer someday...

no, I wrote it the way I know it to be. I lived in the Muskegon MI area for about 8 years and about 90 percent of the sweet people on the radio were running power. Shootouts were not uncommon there. After about a year of trying to talk over or under them, I just turned the radio off and it stayed that way for about three years. I eventually moved north to a quiet part of the state and still more people here run amps than dont.

Hello ALL;
It would be better for all if the freebanders stayed clear of 10 and 12 meters. I also beleive that the FCC should invent a new class of ham ticket. This new class of ham radio operator should include the CBer and freebander. I think in this democracy the FCC A.K.A. Uncle Charlie should give the people what they want. Its been my experiance that CB radio operators treat there CB radios as a Hobbie. I realieze that this isn't what the government had in mind when they took the 11-meter band away from the hams and gave it to the CBers in 1958. I still can't believe the reasoning behind putting a limit on how far people can talk on a band that is so full of propagation. Human nature is to want to talk to a voice so far away. If the FCC is ever going to get control of this part of the spectrum they more or less have to give the people what they want. They also have to rethink the marketing plan behind family radio service. Make FRS radios more like cb moblie radios and base stations instead of the walkie talkie style of today. Then get the truckers to move to channel 10 (Just an Example any channel would do) of the FRS Family radio service.
I think we should find a lawyer to partition the FCC with this idea. The 150 mile rule was put before the commission 1 or 2 years ago. They through it out saying that isn't what the CB was made for(In common terms). So I think that if we want increase the ranks of the amatuer radio population that this would be a good start.

Doubt it. He had a Cobra 148 for a radio and was using
a 102" for antenna

> 3. The owner could be trying to get people to say "What in the HELL is
that?"

LOL! You might be right here too

> 4. The owner might not have wanted to drill holes in his lightbar, so he
> used the existing holes for the lights to mount his standoff bar to mount

> lightbar to the flatbar the antennas are on, the ground is all the same.

No, he had thee mounting points for lights. As for bolts
going all the way through, it looked as though it was rubber
mounted.

Richard, you finally got me. I was sitting here figuring out what was going on. The roll bar would be far too short to act as a counterpoise (gee, is the roll bar insulated in the middle too?). When I read your two responses, I felt soooo stupid! Your answers are VERY likely right on target. Either someone sold someone else a bill of goods, or the guy is simply putting on a display. My concern would be if something should happen (like a sudden downpour whilst in a turn and one hydro-planes) and he should roll over, those ceramic thingies will likely shatter, leaving him without a roll bar whilst he plays shake-rattle-and roll. Not a pleasant thought.

Thanks for a good chuckle from Rochester, NY
Jim

It's ok for mostly listening. The range of the transmitter is not great with
the very short antenna provided.
If you plan to use it only for traveling... it might be the economical way
to go.

>guys get hurting for money on the road, they like to sell there set ups>

LOL, That's no joke, hang around the back lot of a truck stop and you can get just about anything you want and even some things you don't want.
I've been retired for about 20 years but I used to make and sell overhead consoles to other truckers. I rigged them a number of ways but basically they had a slide mount for a CB and contained a tr switch and an audio sensitive switch. They would allow the driver to listen to an AM/FM radio until the squelch was triggered on the CB then it would mute the AM/FM. When the mike was keyed it would mute the AM/FM and hush a bird dog (fuzz buster) . On some of them I would install graphic equalizers and, etc., depending on what was wanted. It made it real nice for drivers like my self who drove mostly at night and somtimes wouldn't see a soul for miles.

No Snatch block, All of a suden the story takes a few more twists, ceramic insulators would surely
break in the application you are talking about, especially with a 102 inch whip
on top of a roll bar hitting trees, ceramic has no flexibilty, and you have no credibilty.
Oh yes Landwhale your the electronical genius, move over #12 boo hoo there is no answerfor your make believe story
conjured up after I said you only troll the NG. Who has given the right answer ? There is no right answer. now go play in traffic little boy.

I would thing that the freebander and CBer would welcome the deregulation of CB. In my opinion it would make for a better time for all and it would also increase the number of people in the radio service. What is happening now is the business sector is trying to take more and more frequencies from the public. I know you as a CBer say "I don't care it dosen't affect me ." But it does as the government allows this to happen the rules will get stricter and stricter the fines levied will be more and more and there will be less and less peole to fight this incersion. That is why I beleive in the full 100% annexation of the 11-meter band. What I mean by 100% annexation is not only the frequencies but the operators too.

> bit more difficult to jam. Do they even make 49 MHz cordless devices
> anymore?

Not sure, haven't looked for them in the stores (for obvious
reasons)... maybe some lid has already figured out how to mod a 900
MHz cordless headphone into a jamming device. I know that Radio Shack
still sells those little 5-channel 49s, and there are GI Joe & Barbie
walkie-talkies for kids (I once confused the hell out of 2 boys up the
street from me when I made remarks over their GI Joe jammables). Baby
monitors on 49 are also jammable---nothing more alarming to a new mom
than hearing baby rasp "bring me a beer!"

As for 2.4 gig, that's probably next in the sights... though I
personally would steer clear of that band, said to be real bad for RF
tissue damage. Some idiot will probably kill himself trying to jam
that band with the ray gun from a junked microwave.

Problem with cordless phones though is they're unlicensed, low-power
equipment, so they really have no place to operate but the
"smorgasbord" bands... years ago, there were 1700 KHz cordless phones,
then came 49, 900, 2.4 gig... piece-o'-junk jammables are running out
of bands.

Some whiz kid has probably got spread-spectrum licked too, pretty much
the same way hot-rodders have learned to remove a Cadillac's CPU and
replace it with an EPROM containing doctored engine specs.

I have a RS CB radio that I use indoors and connect it to my ham radio power supply. I have been told by a Radio Shack clerk since I use a 12volt power supply (actually it is a Astron 13.8 volts PS that also runs my Icom 735 ham radio) at home I can also easily connect the CB to my car battery. Is this true and is it easy to do???...I figure all I need is extra wire and it will do the trick..any info appreciated. The CB has two terminals I connect on back of the power supply.

1785. Re: Connect CB to car battery question

Source record: 127691

Of course you can. For very low power devices (walkie talkies), one can
simply plug into the cigarette lighter (if your car has one), for
somewhat higher power, often the fuse panel is tapped for power. For
higher power rigs (and many commercial VHF/UHF transceivers), a seperate
run to the battery is in order. This doesn't mean you can't use the
car battery run for low power devices. Just make sure to have an
in-line fuse for the positive wire from the battery. If anything were
to go wrong, car batteries can pump hundreds of amps with spectacular
(even if undesired) results.

I doubt 2.4 GHz is any better/worse for rf damage. As you mentioned, they are low power devices. Since they are, it is unlikely you'll hear them at all past a couple of miles, max. If if you are close by, you'll likely not even know it is in use because of the spread spectrum. The neat thing with spread spectrum is that several users can share the same space at the same time - with virtually no interference. Certainly the new cordless phones are also making it much more difficult to intercept the transmissions as well as make it difficult to jam. Each time I hang up the cordless, it randomly selects a new hopping pattern. I'm not sure how many there are, but certainly enough to make things interesting if someone wanted to receive it.

Source record: 127695

OK, with the advice of some of you, here is my plan to mount my 18 ft. Base antenna. tell me if it sounds good.
I went to Home Depot, and saw that they had 1" galvanized steel pipe in the plumbing section Each one was 10 feet long. I figure I'd get two pipes and couple them with a coupler for a total of 20 feet. I then plan on digging a hole in the ground about 2 feet deep by 1 foot wide. Filling it with cement, and putting the bottom of the pipe in there for stability. I also plan on using 4" standoff mounts from the side of the house along the side of the pipes every 5 feet or so for even more added stability. Then, I will U clamp the antenna to the top of the pipe with at least 2 U clamps. Does any of this plan sound like there is room for improvement? Is 1" thick pipe too thin? thick? These pipes are hollow, so I don't want water getting in them from the hole at the top of the pipes. Any ideas on what to use to seal it off? Anything else I may have missed? Sorry for the million questions. I wanna do this right. Thanks

Thanks chaps.
Over here, 24volts is normal. Truckers usually use droppers to reduce
it to 12, although some just connect across one battery... and get spanked
by their bosses for it. When the droppers go faulty (they can often be
overworked with the power some truckers use), they sometimes put the
truck voltage straight through... sometimes with drastic results.

Some are even designed to shut down some of the well known anti-virus
packages.

If you dont know the "sender", then it is probably spoofing the details
from the address book of the infected computer that also has your
address in the address book.
It is probably also sending out copies with your address in the sender info.

You could post the "sender" details on here, see if someone in the group
recognises the name. Or see if the IP number may relate to someone on here.
It does seem to be happening to people on this newsgroup.

I would make the hole a bit deeper for a better ground. 4 feet should be good depending on the soil in your part of the world. Put gravel in the hole then the pipe then cement. That will let the water drain out the bottom without loosening the antenna footing and you would have no need to cap the top. Check your U-bolts and mount on the antenna. I do believe that most are 3/4 inch and won't fit a 1 inch pipe.

You bring up a good point. Do I no longer have to run a ground wire because I have the actual mast so deep in the ground? That would help eliminate 1 extra wire. Thanks

I'd like to use 1 1/2" pipe as well, but I thought that the U clamps max was 1"? Also, the 8" standoff's I thought could only take up to 1 1/4" diameter. I would say that there is about 22 feet of air above the house. But this includes the 18ft. antenna. So i guess there really is only 4 ft. of air. I don't need to guy this correct?

Well, I wouldnt be putting an antenna up that way in the first place. Put it in a really tall tree and wrap rope and nails into the mast pole which your antenna will be on, that would be much cheaper and saves alot of thinking. Thats just my opinion. or another thing, you could buy a roof mount so u can mount your antenna on the roof of your house, that would be an idea also

I agree. Some people can't "comprehend" the possibility that some
people are open and honest about their identity. Instead they make
arbitrary name associations with total "disregard" of any evidence to
the contrary.

Water pipe in my experience has proved a bit too soft, read low strength, for use as an antenna mast. I would look for some high strength aluminum mast, or high strength steel mast, made for supporting antennas. If you insist on using water pipe then you're going to have to do a real good job of putting up guy wires if you don't want the whole thing to get bent over during a thunderstorm.

If you listen to a cb for hours on end you'd appreciate the lack of roger beeps. They are especially iritating in the wee hours of the morning when the radio is relatively quiet and all of a sudden...BEEEEEEP!!!!

But why stop with roger beeps? Why not go on with those echo boards that no one seems to be able to set within a humanly tolerable level?

A technical truck driver? Seems there's several of us out there for one reason or another. There might even be one that until recently worked as a Motorola systems tech until he finally needed to escape those snowy damn mountaintops for a winter or two.

And yes...that First Phone..now GROL..does fit nicely next to a Chaufuers..now CDL. (never learned to spell either)

I do sooo like to play customer at these truckstop cb joints and let them try to snow me with technical babble in attempts to sell me something I "really need". I wish there was a future in playing mystery cb shopper. I could write a book.

On my way to Kenosha tonight..

Water pipe generally is not a good masting material. It is harder than
aluminum, BUT it's strength to weight ratio is much lower.

This strength to weight ratio comes into play when some length of
masting is left un-guided. What happens is the mast/antenna will
sway in the wind and it's extra weight/inertia will easily bend water
pipe.

Aluminum pipe does not have nearly the weight and will not add
extra inertia to a swaying assembly.

If you are using the mast for just extension purposes, meaning it will
be securely guided, then go ahead and use the low cost pipe.
If however you want to use un-guided masting the best choice is pipe
made for that purpose. Even better than hardened aluminum is hardened
steel masting. Hardening the steel allows the masting to be lightened.
This is accomplished by using as thinner wall thickness.

Hello-

I read through the NG FAQ and thanks to all who put that information together!!

I'm thinking of purchasing a CB radio for my truck. I do a lot of driving and have always been interested in CB. I've located what seems to be a nice 40 Channel unit with the weather service for around $69.

My main question is in regards to the antenna - Radio Shack sells a "Cellular" look-alike antenna that requires no holes and mounts via adhesive to the glass. The FAQs had some good info on antenna but I'm wondering if anyone has thoughts on this particular type.

Thank you for your help!

Cheers!

Losh in CT.

I recommend to stay away from this style antenna. You will not get that good of range at all. I don't know what type of truck you have (Van, 4x4, etc.) But if you could, get a roof mount antenna. If not, at the very least, get a 102" whip and mount it to the bumber.

RULE 11 - Linear Amplifiers
{A} You may not attach the following items (power amplifiers) to your
type-accepted CB transmitter in any way:
[1] External radio frequency [RF] power amplifiers, also called linear
amplifiers, or linears;
or
[2] Any other devices which, when used with a radio transmitter as a
signal source, are capable of amplifying the signal.
{B} There are no exceptions to this rule and use of a power amplifier
voids your authority to operate the station.
{C} The FCC will presume you have used a linear or other external [RF]
power amplifier if-
[1] It is in your possession or on your premises; and
[2] There is OTHER EVIDENCE that you have operated your CB station
with more power than allowed by CB Rule 10.

There are actually some neat concepts contained within this post, I thought it;d be interesting to kinda "pick it apart," so to speak. :-)

oris@dirtball.com (Oris) wrote in message news:<f7a9c6ac.0206151743.46e65cd2@posting.google.com>...
> Hello ALL;
> It would be better for all if the freebanders stayed clear of 10 and
> 12 meters.

No doubt. This will attract unwanted attention, and quickly. However, it's likely not the "freebanders" on 10 but more than likely the truckers who've found a nice quiet place to chit-chat on "ch. 19 two-up." ("Except for all thos annoying little beeps!")

> I also beleive that the FCC should invent a new class of
> ham ticket. This new class of ham radio operator should include the
> CBer and freebander.

Now this is probably not such a bad idea, depending on how you approach it. However, in the end it'll never work...because of basic human nature. First off, you'll NEVER market a new allocation using the word "freebander." It insinuates that the forces of good have succumbed to the forces of evil and those who've been naughty have yet to be punished for their past transgressions. In effect, it would wipe the slate clean...without compromise. Now, suggest an additional shared amateur/citizen's 11-meters with one of the "combined" roles being the eradication of the non-conforming "forces of evil," and you've got somewhere to start. Even this would be a tough sell to the "no-compromise" crowd. Believe it or not, the "no-compromise" crowd is the "freebander's" best ally. There's hardly been any enforcement of CB/11-meter activities sans an occassional bust, here and there...so why change? But a shared band, hmmm...27.4051 through, let's say 27.84999 MHz, 30 watts P.E.P. (As in CW & SSB only!) with licensing and a written CW exam for DX privies? Interesting concepts to play around with.

> I think in this democracy the FCC A.K.A. Uncle
> Charlie should give the people what they want.

Stop! The FCC and democratic process have nothing to do with one another.

> Its been my experiance
> that CB radio operators treat there CB radios as a Hobbie. I realieze

> still can't believe the reasoning behind putting a limit on how far
> people can talk on a band that is so full of propagation. Human
> nature is to want to talk to a voice so far away.

This is entirely accurate. Although, some very good point were made
wrt the available technologies of the time. Some excuse the FCC's
inept allocation efforts because of this...?

> If the FCC is ever
> going to get control of this part of the spectrum they more or less
> have to give the people what they want.

No, they don't. If THE PEOPLE are ever going get control of this part
of the spectrum, THE PEOPLE will have to use whatever resources they
have at their disposal to effect change. (Hint, $$$ and For. ___
Against. ___Abstain. ___)

> They also have to rethink the
> marketing plan behind family radio service.

From the folks that brought you the 155.3 mi. limit on HF CB?!

> Make FRS radios more like
> cb moblie radios and base stations instead of the walkie talkie style

Not a bad thought at all. The real problem lies with the inability of
the various 11-meter interests to pool their resources and pull on the
same side of the rope.

WOW! You sure told me. Twisted? It's called testicular torsion. <<

Whatever you wish to call it doesn't excuse the behavior of anointing yourself judge of what constitutes a "real" hammie. There exist a certain minority of present company that inserts sexual connotations in most of their posts. The emotions one like yourself derives from such dialect reveals more than anal retentiveness.

>It quickly leads to impotency, maybe it already has.<<

Dunno. Go see the doc and he'll give you a very small jar to fill. Thanks for the concern, but my powerhouse sexual virility should be of no concern to any heterosexual healthy male.

>Nothing that you could do would send my blood pressure into "stoke zone." <<

Wow, that's some paranoia you have going on, not to mention the ego action to assume I would bother with eliciting a reaction from you. How you feel is of no concern to me whatsoever. Whether you reply is of no concern to me whatsoever. I don't care if you want to take credit for INVENTING cb..if you come on here talking disinformation, it will be cut to shreds. You made it personal with your insults, putting on display for the world your ignorance and inability to effectively communicate, let alone debate. You fit very nicely into the pigeon-hole of hammies/cbers that are of the delusion they are somehow above others because their time involved in radio dictates it. Ironic those that talk the most shit concerning the radio hobby also maintain the most difficulty in communication.

>Again, maybe it's that testicular torsion thing getting to you. <<

Half right. "AGAIN", you reiterate and equate male sexuality with your replies. Thoughts such as these always rising to the front of your small mind should give cause for pause.

"Twistedhed" <twistedhed@webtv.net> wrote: (in response to Muenzler's sarcasm, which he conveniently snipped):

Grow up. Be a man. Change yer' damn frequency..or better yet, shut the damn thing off if it sends your blood pressure in stroke zone. Most ten meter intruders are truckers. Put that in your cracked pipe and smoke it.
Kevin, WB5RUE
27 years as a ham
30 years as a CBer<<

How many years since your last bowel movement? Maybe post that with along with your sig and everyone will understand at a glance.

>Understand? I guess it went right over your twisted head. I was, and still am, a CBer long before I was, and still am, a ham. <<

And this means nothing to anyone but yourself.

>Too complicated for you? In other words I became active in CB three years before I became a licensed ham operator. Still too complicated?<<

Do you have a lifer patch attesting to such feats? How about a fez for the cap with with your call on it?

> In other words I've been a CBer longer than many people on this newsgroup could say CB. Back when CB was operated by people who were civilized and polite. Back when it wasn't the size of your amp that counted, back when it was the caliber of the person operating the radio. Days long gone. Kevin, WB5RUE
CBer since 1972
Ham since 1975<<

Yea, yea,,,a set of rules for everyone but yourself. The "caliber" of person you speak of was well represented when you were unable to deal with my merely taking issue with your self-anointment of judge, constituting what a "real" hammie is. You returned with several insults instead of acting like those you speak of from the olden days you pine for so.

>There, maybe that's simple enough for even you to understand; even with testicular torsion.<<

I guess if one lives to be as old as yourself and still hasn't learned how to stop pining away for the way "it used to be", thoughts of days of when you could actually still "perform" may actually become an obsession. How you couple that with cb is as confounding as your fondness and interest of my sexual prowess.

1838. Heil HMM Hand Mic

Newsgroup: rec.radio.cb
Date: 2002-06-17 15:22:15 UTC
From: wa2si@arrl.net
Message-ID: <b7d1465c.0206170722.586d3260@posting.google.com>
Source record: 127739

Hi guys, (& gals?)

I just picked up the (not-so) new Heil hand mic and am in the process of wiring it for the Uniden Grant XL. Of particular note is that this mic (as are all Heils) is NOT amplified. It comes with a "Full Range" and the HC-4 "DX" elements with a small slide switch on the back to select the "audio" that suits you (or the prevailing conditions) best. I personally am interested in hearing the audio reports on the CB with a Heil mic. I use a Heil mic with the FT-840 and most ARO's seem to love the audio. It's not loud, but it's crystal CLEAR.

I did go through the "voice of God" phase during the early 80's. I'd heard an op that was using an AR-3500 with an amplified D-104 and it's actually hard to describe how loud and clear that audio was. There were also guys with 2000 GTL's and Madisons that had booming audio when coupled with the D-104s and Turners of the day. I had a D-104 that could "hear" a mouse pee on cotton...downstairs! Eventually, it became difficult to listen to one of these guys during a rag-chewing session because when you set your speaker volume level to accomodate the rest of the folks at the round table, these guys would come in a break your eardrums. (But they were ALWAYS the first station called by a DX op cutting into the session.)

So I'll give the non-amplified Heil a shot. The Uniden already has excellent audio and I'm interested to see how the Heil sounds with the speech processor on as well. I'll update you guys (& gals) as soon as I have some substantive data.

Hello there, Oris.

>I would thing that the freebander and CBer would welcome the
deregulation of CB. <<

I can see your point of why some dual cbers/hammies might support this,
but I think to maintain cohesiveness among all would be too difficult a
task.

>In my opinion it would make for a better time for all and it would also
increase the number of people in the radio service. What is happening
now is the business sector is trying to take more and more frequencies
from the public. I know you as a CBer say "I don't care it dosen't
affect me ." But it does as the government allows this to happen the
rules will get stricter and stricter the fines levied will be more and
more and there will be less and less peole to fight this incersion. <<

This is absolutely correct, but hammies are threatened by this action as
well. By matter of frequency auction record, hammies have the most to
fear as far as losing spectrum. I think cb is pretty safe, at least in
most of our lifetimes.

>That is why I beleive in the full 100% annexation of the 11-meter band.
What I mean by 100% annexation is not only the frequencies but the
operators too.
                    73 Oris<<

You have to not only convince one group, but the other as well. Double
the trouble.

From: w5lz@icok.net ('Doc)
>James,
        'EEI', as the story goes, was cited by the FCC.
To weasel out of the citation, the company was 'absorbed' by
'Megatronics'. Megatronics having the same officers, location, stock,
etc, as 'EEI'. To further complicate the corporate trail 'Megatronics'
has now bit the dust and has been absorbed by 'Aecer'(not sure of the
spelling), who now claims to be a wholesale only outlet. Same people,
same place, different name to confuse the honest.
                                        'Doc<<

Knowing nothing of the business, it appears to be merely another
situation that is playing by the rules they were given. This type ploy
is done daily across the US, business as usual for companies playing the
bankrupt reorganization role.
The blame should be placed where it belongs, on the system that designed
it, not the person playing by the rules it was given. Was it legal? Yes.
Is it morally ethical? Another discussion and one that should be taken
up with the designers of the game rules, not the players.
There is no "story." Just facts.

news:20418-3D08BFF1-46@storefull-2315.public.lawson.webtv.net...
From: wb5rue@yahoo.com (Kevin Muenzler, WB5RUE)
>In other words he condones their illegal activities. Then he's not
truly a ham operator. REAL ham <<

Man, I just love watching your type elevate yourselves to that of
dictator of what constitutes a (cough cough) REAL hammie.

>Why is it that when someone advocates enforcement of the rules he's
called a dictator?<<

Has nothing to do with the rules,,,you want to debate that, fine, save
it for later. For now, you set forth your idealic version of what a
hammie "is". I can assure you, you are not alone in the opinion, nor can
we say most do not agree. A single nor minority view doesn't necessitate
validity, but I understand your opinion. I wasn't downgrading your
opinion, merely taking issue with it.

>I guess that's why CB has been dubbed "children's band." If you'd get
that thing out of your mouth maybe you'd get rid of that cough too.<<

It's a gag reflex when someone offers something unpleasant to the
refined palate.

> It might be the cause of your testicular torsion. <<

Thanks for the inquiry, but there probably is some type venue on the
net better suited to your eccentric and particlular unsatiable desires
concerning other men's testes as your topic of choice, rather than a cb
ng.

>operators uphold the promise they make when they sign their license.
Part of the promise is to follow ALL FCC rules and regulations. Another
part is to encourage others to do the same and to report those who are
not.
Kevin, WB5RUE <<

Yea, well report me. I freeband daily, have for years and years, and
talk to hammies that have been around quite longer than yourself...all
on the freeband.

>I'd love to but I'm a bit busy putting the financial hurt on those in
my area, so far 27 this year. Some of them are (were) hams. It's much
easier than you think.<<

Actually, it's much harder than you are leading on to believe, but do
tell us more. If you have had success removing the number you claim,

please share your secret method of success with the world. There are many present who have first hand REAL world experience with the FCC and have been trying for YEARS to get
some idiots off the air with no success. With your claimed record of success, you should have no problem ending cb/hammie (you did say you were concerned with both, did you not?) in no time. The world is waiting and watching for you to reveal these methods that somehow only you were able to expedite and manage to get fined? Through what local jurisdiction or federal avenue did you employ?

> I'm sure that if the FCC was standing in front of your house you wouldn't be so "brave" as to make freebanding claims. Yeah! You're a man! <<

Taking absolute responsibility for all my actions, yes I am, thank you very much.

>But you'd surly be crying if you were standing in court. <<

Then surly you aren't too perceptive.

>I see it happen all of the time.<<

Well, we're gonna see about that aren't we, Mr. Muenzler? You're gonna explain away for us your method that has magically done what no other could do with such speed and conviction.

> Guys make big claims of how big their amp<<

Then cry to those guys.

> is until the FCC marshal is holding it in his arms. Then the guy is crying like a baby. I'm sure you'd be no different.
Kevin, WB5RUE<<

Good thing you know what you are so sure of, otherwise you may get confused. Now...we're listening.....

Bert,
Personally, I think you have the two worst mic-elements
that Heil offers. The 'Gold' or wide element is much too
wide for normal use, and the HC-4 is just the opposite,
much too 'narrow'. Too bad you didn't get the HC-5.
'Doc

What's up Doc, (Sorry, couldn't resist. Sorta like "Hey Bert!")

No worries, the HC-4/5 standard studio mic's in the inventory too. I do kinda like the Goldline's sound though. (The rag-chewer in me, I guess?) Take it easy. :-)

Sparky tried with:
>Of course you do. That's why you hide behind an anonymous nic.<<

Anonymous? Why, cb IS anonymous. Besides, if someone is seeking me they can walk/crawl/drive right over. I'm not hard to find, and certainly not hiding. What is perplexing is that no one but yourself, Lelnad, and george has ever expressed the slightest bit of interest in who I am. You girls obviously are easily entertained.

From: w5lz@icok.net ('Doc)
>James,
=A0=A0=A0=A0=A0=A0=A0=A0'EEI', as the story goes, was cited by the FCC.
To weasel out of the citation, the company was 'absorbed' by
'Megatronics'. Megatronics having the same officers, location, stock,
etc, as 'EEI'. To further complicate the corporate trail 'Megatronics'
has now bit the dust and has been absorbed by 'Aecer'(not sure of the
spelling), who now claims to be a wholesale only outlet. Same people,
same place, different name to confuse the honest.

No. Unles you make up stories that I'm using 200 other accounts,
there's no way that my expressing opinions that you don't agree with
constitutes "jamming".

> >
>
> Yes, but in his case it's anonymous malicious jamming.

How is my posting comments (which support FCC CB rules and courtesy on
the air) "jamming"? Are you being prevented from using Usenet? No. You
just don't happen to agree with my opinions. And in this case my
opinion is that someone who intentionally jams other people's
telephones then brags about it in a newsgroup is a sicko.

Randy,

I think you have figured out by now that I am Frank, and so we can drop the pretense that you are not "Jicon". The reason I am writing is to broker a deal. I have been posting as Voobner and several other personalities for a few years now, partly as entertainment, and partly to provide some reliable legal and technical information as it relates to CB radio. As a person with a technical background you can understand the need to have the right information available to CB'ers in a form that they can understand. I hold you no malice and extend my sincere apologies for treating you so rudely in some of the discussions we had in the past. I hope you understand I was responding in the competitive spirit of the "flame-war" and bore you no personal ill will, regardless of how I came across in print. Now, here is my offer. Let's forget about the past and agree to disagree in the matter of legal vs. illegal discussion on the newsgroup. I will not knowingly respond to your posts and ask that you not respond to mine. Neither will I refer to you in any manner other than cordial. In return you will agree to ignore my other personalities (Voobner, Sparky, Recradiocbpolice, Coaxlengthpolice, JJ, and Auntikeyclown) inasmuch as they may engage others in discussion. I am approaching you as one adult to another, so I ask that you keep this agreement between us and not publish this on the newsgroup.

Sincerely,
Frank
"Aaron"

Whats that Tim, You don't like the sound of Hi-Fi SSB, you prefer
distortion?

1868. Field Day; something new this year

Newsgroup: rec.radio.cb
Date: 2002-06-17 23:12:07 UTC
From: Richard McCollum <rmccollOMA@worldnet.att.net>
Message-ID: <b1uP8.41794$LC3.3185450@bgtnsc04-news.ops.worldnet.att.net>
Source record: 127774

The fourth weekend in June is Field Day where the Amateurs tell their wives they are in a big emergency exercise on generators etc. but really go out in the woods to drink beer and talk dirty. Sometimes getting anyone to actually man the station(s) is a problem. It is in theory a contest and some clubs do indeed run it as one but the atmosphere is generally pretty laid back.

It is an opportunity to do a little PR with both the public and one's own club and this year a new wrinkle is designed to do a little of both. Traditionally, there is a Novice/Technician station where some Extra plays control op (all he is required to do is be in a position to pull the plug but he'll help if asked) and lets the newbies get into a major pileup on HF. This year there are extra points for running a GOTA station (Get on the Air) which is designed for newbies, inactive Amateurs, and the unlicensed of the world to experience sheer chaos without being tied to the chair on a regular station. The object is visability so why not be visible? You will more than likely get to see not only the usual suspects (cw and SSB) but also PSK31 and some other digital stuff that is slicker than an eel in a bucket of castor oil.

Unless you go to piss in the soup, odds are you will get a friendly welcome although to be honest you would probably be better off not emphasizing your working Australia on 27.600. Not so much because of the legalities but because it is so blessed easy when the spots are up. Just don't get into an 'us vs them' and you will be fine. If you have some ex-friends in the club, don't sweat the small stuff; us OTs will wring their bloody necks if they get out of line but odds are they will not.

Local clubs can be found at http://www.arrl.org and many clubs have websites that will give you directions to the Field Day site. If not drop a dime on their contact. Times are 1800 UTC (1300 CDT) Saturday 22 June to 2100 Sunday. Try to stay away from the end times or you will be commandeered for set-up and take-down :-)

Think about it.

By George, it's an amplifier!

Put a small signal in one side, get a larger one out one side.

The amp don't care if it's 24, 25, 26, 27, 28 or 29 MHz.

Scott, it may if it doesn't have the 10 meter tap in it, also very true an
amplifier has no conscience,
that's why the AKC Organization must remind the sellers and prosepctive
buyer /operators of these
things of the respective laws governing there use.

If one does not know about the care and feeding of a larger
amplifier, then one must be prepared to pay the cost of
repair. That said, they should stick to smaller boxes.

Typically A Amateur Radio amp... However, if you do the 10 meter mod
and retap the coil, could be easily used on 11 Meters... Which is alot
of work...

Bip ye to the local library and pick up Peter Drucker's 'The Effective Executive' and read the part about Priorities and Posteriorities. The village idiot can set priorities, it takes cajones to set posteriorities - those things you refuse to do so as to have time for the real priorities.

The FCC simply has bigger fish to fry and with the exception of making some effort at 25 and 28 MHz is quite content to let CB boil in its own juice. They simply do not have (although they are slowly getting) the manpower to do useful enforcement and prefer to use the resources somewhere else. Listen to Riley Hollingsworth on Rain and he is often out doing Land Mobile issues. So aside from hitting a truck stop when one of the agents needs a whiz and some dump trucks that show up at 28.085 on the trip home CB enforcement is going to be pretty random.

I would suspect that with terrorism issues and the normal progression of things, the fun will not really begin until after the current spot cycle drops and begins to come back the next time. Until then, the FCC is not anxious to get caught in a swamp where there are no real public safety issues involved.

yeah, BUT if you don't retap the coil, you'll have a high swr between
the radio and the amp, which could cause you to blow the tank
circuit.. which is not a good thing! :-)

you wouldn't be so "brave" as to make freebanding claims. Yeah! You're a
man! <<

=AO=AO...gee, Spark, you only do that when you were in drag and forget
to reset your settings properly.

Taking absolute responsibility for all my actions, yes I am, thank you
very much.
Sparky tried with:

>Of course you do. That's why you hide behind an anonymous nic.<<

Anonymous? Why, cb IS anonymous.

>Not if you have the Twisty-Buster radio direction finder! <<

No, cb is anonymous, just another aspect for you to take issue with. It
is exactly like I said, you and the other malcontents are the only ones
obsessed with cbers realnaems, identities, addys, etc. Dunno why, it's
not like you would walk over and introduce yourself to me or anyone else
here who places your rants with the densa litter.

  Besides, if someone is seeking me they can walk/crawl/drive right
over.

Over where? <<

To my place. You even posted satellite pics to my front door and
achieved a sense of accomplishment with the action, remember?

If I remember correctly, <<

Apparentl you don't. Dealing with me has taken everything you had left.
You're nothing now.

>Aaron traveled in your direction about a year ago. <<

No, you didn't. George claimed he did, but posts came from him the same
weekend he was supposed to be in Lutz,(chuckle) which neither of you
still can't pronounce...heheeh!

>He even asked you directions, but alas, you were nowhere to be found.
<<

Directions to my front gate are to be found, if that's what you want. Simply because you are unable to manage the information is no surprise.

>even think <<

Another mistake....

>that, at one point, -he- gave directions where -you- could meet him! <<

I give the directions and answer to no one. It works like this, if I was the slightest bit interested if you drew breath and wanted to meet you, I may offer to drive to meet you, as I did several on this group already. As you know, I care about little. You wish to meet me, you come to me. The funny part was George popping open an Atlas and finding a town near me and saying he was going to be there...Lutz of all places...if either of you knew anything about Lutz, you would find the comical hysteria in that lie as much as us locals did. Mnay of us laughed our asses off at that comment.
A good 30 miles south is not considered the bay area. Come to the bay area.....anywhere you wish if you wish to meet the person who treats you like you deserve.

>You were a no-show (gee, what a suprise).<<

We know your record with this BS....like the time you were gonna shoot Moparholic when you were in his neck of the woods....
  I'm not hard to find, and certainly not
hiding. What is perplexing is that no one but yourself, Lelnad, and george has ever expressed the slightest bit of interest in who I am. You girls obviously are easily entertained.

>Hey, -I'M- Leland, or have you forgotten that delusion already? <<

Doesn;t amtter who you think you are today to anyone but you.

>But a nice try diverting attention away from your "absolute responsibility" crap. <<

No diversion. The topic you currently entered into the thread is your unsatiable fetish for identifying cbers, nothing more, nothing less.

>So does that work for you as a pickup line at the bars, too?<<

As I said, memory serves you very poorly. I don't drink, children all grown and gone, happily married, and can afford to raise a little cane here and there. C'mon down....I'll take ya' fishing!! I'd offer to take ya' hog hunting but after that baby moose incident of yours, well, with the heat and all down here, them stained drawers from a razorback chasin' ya' would get mighty ripe mighty quick. Hint: You hit my business page, ONE time, a long time ago,,,it;s still there, but you'll never find it again 'cause you don't even know what you're looking for. Only reason I mentioned it is 'cause it apparently was important enough that you went searching for charter boats in my area.....LOL! Better luck next time. Who knows, you may prove yourself worthy enough for me to christen you official rec.radio.cb sleuth.

twistedhed@webtv.net (Twistedhed) erred with: Aaron erred with:
Nice try, twist.<<

Thanky, Franky.

>Trying that 'truth by repitition' thing again I see. <<

No matter how many times the truth is repeated, you are always there to take issue with it, like a puppet on a string. At least you admitted it this time.
Merely presenting a balanced and sensible opposite view, free of the BS you try to ply serves nicely.

>It hasn't worked in the past, so I don't understand why you are trying it again.<<

The only thing that hasn't worked in the past is your efforts at playing Baretta of rec.radio.cb. If you want info on me, simply ask..if I feel it worthy of a response, I will gladly give you an answer with a big 'ol southern grin.

>On the contrary, the very first post of this thread consititutes a violation of federal law, or can't you comprehend section 2.815?<<

Of course, but you changed the topic and jumped in first chance you had when I asked that lying Muenzler to back his claims. Even you knew they were BS which is why you rushed in where angels fear to tread. Do Muenzler a favor and email him privately, Spark, at least teach him a thing or two about how the system works.
Moving on...
The definition of "comprehension" alone eludes you. Quite a difference between "comprehend" and "disregard."

>I agree. Some people can't "comprehend" the possibility that some people are open and honest about their identity.<<

And this has what to do with cb? How many handles on the cb do you consider an open and honest presentation of one's identity? Once again, the creedence you lend a cber's identity is second only to Muenzler's claims of busting 27 cb/hammie radio outlaws.....THIS YEAR ALONE!
Entertaining and astounding how you correlate cb handles with subversive acts of choreographed criminality and subterfuge.

>Instead they make arbitrary name associations with total "disregard" of any evidence to the contrary.<<

Hey, when you're right you;'re right, and there is some truth to what you say, but it wasn't what was being presented. Your posts are like cow pies, all over the place.
Presenting it in a context offering a differing view than what you hold is a sure way to lend even more credibility to what you set forth. Your assuming concept of a legality not being "comprehended" is another of your many errs, in and of itself, as certain aspects of it are selectively "disregarded", having nothing to do with arbitrary names on cb, which in essence, are nothing but handles, therefore, anonymous.
I know it pains you, but Muenzler needs more than you can offer him, Frank.

>Oh sure, crime is not the criminals fault: <<

You're the one to mention crime. If it isn't illegal, it can not be considered a crime. Coming from one who hasn't quite figured out why speech concerning amplifiers isn't illegal, not one person with a double digit or higher IQ would expect you to have acquired the information to tell the difference.

>"the system made them do it".<<

No, the system designed the games and then distributed the pieces to the players. Being impotent, you badger the players.

> LOL. Another Twistedhed Classic.
-A <<

Along with being the truth, the whole truth, the undistorted truth.

1894. Kevin Muenzler, WB5RUE claims 27 radio busts this year alone,...

Newsgroup: rec.radio.cb
Date: 2002-06-18 14:36:48 UTC

Hey Kevin, how about some elaboration on the questions posed to you concerning your claims about the cb/hammie busts you made and successfully prosecuted this year. It's a simple request. Maybe you disappeared from rec.radio.cb and the question needs posed to a hammie ng. Maybe I'll get lucky and someone will crosspost the question to all the groups and you will end up seeing it somewhere and then be able to reply. I'd do it myself but webtv can't crosspost. Inquiring minds really wanna know!

Well Pete'e

You imply that 4cx250b type tubes are bad news in the IMD department.
There are many tubes with better operational IMD specs, but the 4cx250b
family works just fine in linear service. IMD is not any type of problem
if you pay attention to the proper circuit and operational details. Basic
linear amplifier 101 related to a specific family of high gain tetrodes.

If any of the 4cx250b family of tubes are around cheap/free, one should
not be scared off from using said by people posting blanket bad news IMD
statements on New Groups. How about you posting some comparisons of IMD
operational preformanc of some popular tetrodes vs the 4cx250b family and
we'll beat the data back and forth.

The 4cx250b family of tubes work well in properly designed and
constructed linear circuits, simple enough.

Your turn to "enlighten us" with some actual data that you have measured,
not something reprinted or quoted out of an older Handbook...

I'll ask the same question. Why is it that when someone advocates following the rules he's called being a dictator (or whatever negative connotation you want to use)? Yes, "real hams" follow the rules.

Actually AlGor's great great granfather invented radio right there along with Marconi. AlGor found the plans for what would become the internet scribbled in the notes somewhere.

Kevin, WB5RUE
the truth is hate to those who hate the truth.

My hat's off to you Twisted! I have unsuccessfully tweaked you. That's all it was meant to be. I feel like such a failure! :\

I thought of the testicular torsion tweak because I just finished having to castrate a bull because he had that very problem. He has had an "attitude problem" for the past few days and it got to the point that he was starting to gore other animals. He was acting just like the bulls you see at the rodeo where they tie the testicles to cause "irritation." When we sedated him we noticed that he was extremely swollen and diagnosed torsion. He was the point of infection so we had to castrate him or lose him. Yes this does happen in humans too.

Anyway, you're much better at holding your composure than many of the hot-heads on this newsgroup, again, my hat's off to you!

Kevin, WB5RUE

3 Shot in Racist Rampage
2 women overpower gunman
on suicide mission

By ALICE McQUILLAN, DEREK ROSE and BILL HUTCHINSON
Daily News Staff Writers

A heavily armed black man screaming, "White people are going to burn tonight!" shot three people at a trendy East Village bar yesterday and doused patrons with kerosene before he was overpowered, police said.

Steven Johnson, 34, of Brooklyn, was on a suicide mission when he burst into Bar Veloce on Second Ave. and 11th St. with guns blazing and hate spewing from his mouth, said Police Commissioner Raymond Kelly.

"I wanted to kill as many white people as I could," Johnson told detectives after the 40-minute siege, which left Johnson and three victims with bullet wounds.

Patrons said that after he poured kerosene on them, Johnson yelled, "Everyone's wearing gas shirts now!"

"Do you want it hot?" Johnson asked terrified hostages as he began flicking a barbecue lighter.

Before leaving home, Johnson wrote a suicide note to his 10-year-old son and scrawled on the wall of his Williamsburg apartment: "Tell the boys in blue, I won't go easy," cops said.

"This individual is clearly deranged" said Kelly, adding Johnson was carrying three guns, a 30-inch samurai sword, 153 rounds of ammunition, a box cutter, 100 plastic handcuffs, a kerosene-filled bottle and the lighter.

Johnson ï¿½ whose rap sheet for weapon and drug arrests dates to 1985 ï¿½ also was wearing knee and elbow pads, police said.

"He wasn't very eloquent, but he made it clear it was racially motivated," said Ann-Margaret Gidley, 23, one of two women police praised for tackling Johnson and ending the standoff. "We all knew he had a gun and a lighter and we didn't want to die."

The drama unfolded around 2 a.m. when Johnson accosted two men and two women at Second Ave. and 11th St., cops said.

Johnson ordered Jonah Brander, 28, of Fort Lee, N.J., to hand over his wallet. But as Brander reached into his pocket, Johnson said, "I have a problem with you" and shot him in the torso, police said.

As Brander staggered into Bar Veloce, Johnson grabbed one of the women, Elin Juselius, 20, and followed him, firing wildly into the air. Before reaching the front door of the popular wine bar, Juselius broke free and ran.

New York University student Melanie Kaye, 20, was seated near the front door when Brander stumbled in holding his stomach and pleading for help. "Everyone thought it was a joke," said Kaye. "Then the shooter came in."

Kaye said Johnson shot Brander again in the torso and began screaming, "Get back!"

Some customers ran into the basement, broke through window bars and escaped. Others ran into a back dishwashing area, but there was no way out.

Johnson grabbed Robin Arzon, 20, by the hair and ordered her to bind people's hands with plastic handcuffs, witnesses said. He began pouring kerosene on people and threatening to set them ablaze, witnesses said.

At one point, Johnson attacked a born-again Christian woman who cursed Satan, witnesses said. "Don't you mention Jesus again!" Johnson told the woman, knocking her down and kicking her in the head. "Where's God now?"

Iso Shoji, 54, owner of a restaurant next door, heard the commotion and went to investigate. Shoji said that when he poked his head in the rear door of Bar Veloce he was shot.

Steven Johnson
"It happened in one second," said Shoji, who suffered a bullet wound to the left wrist.

After Shoji was shot, Gidley sprang into action. The slender, 5-foot-4 blond jumped on Johnson's back and another hostage, Annie Hubbard, 34, of Manhattan helped tackle him.

During the scuffle one of Johnson's guns went off, wounding Hubbard in the right shin.

Cops then stormed the restaurant and one Emergency Service Unit officer fired a single shot that grazed Johnson in the head.

"It was do something or die," Gidley said yesterday. "I didn't think it was time to go yet."

"They were very brave," Kelly said of Gidley and Hubbard.

Brander was in critical condition at Bellevue Hospital. Johnson and the two other wounded victims were in stable condition there.

In fact what the hell does it have to do with any of newsgroups listed?

Your need to get your head and your ass wired together.

chuck,
Tapping which coil? The 'tank' coil has nothing
to do with input impedance, and doesn't have to be
changed for 11 meter use. If you're talking about
the tuned input coils, they only have to be readjusted.
Not the 'best' amplifier for 11 meters, but it can
be used there.
'Doc

This a fairly classic neo-Nazi recruiting post. And our winner of the DFC (dummkopf, First Class) has this strange agglomeration of groups assigned to him. If he succeeds, his grupenfuehrer has promised him promotion to ueberkellner.

Best leave him to goose-step in silence.

> Oh man... I can see Aaron on the phone right now!

Yes I am. But it's to a bait and tackle shop in Oldsmar, FLA.

Regarding why Copper sells amps openly:

(1) they are dishonest
(2) they are sleazy
(3) they can get away with it while the FCC's not looking

Compare it to a thief who avoids towns where there are plenty of cops.
Instead he steals from places where there aren't any cops. Same thing.

Hope this helps.

Randy,

I think you have figured out by now that I am Frank, and so we can drop the pretense that you are not "Jicon". The reason I am writing is to broker a deal. I have been posting as Voobner and several other personalities for a few years now, partly as entertainment, and partly to provide some reliable legal and technical information as it relates to CB radio. As a person with a technical background you can understand the need to have the right information available to CB'ers in a form that they can understand. I hold you no malice and extend my sincere apologies for treating you so rudely in some of the discussions we had in the past. I hope you understand I was responding in the competitive spirit of the "flame-war" and bore you no personal ill will, regardless of how I came across in print. Now, here is my offer. Let's forget about the past and agree to disagree in the matter of legal vs. illegal discussion on the newsgroup. I will not knowingly respond to your posts and ask that you not respond to mine. Neither will I refer to you in any manner other than cordial. In return you will agree to ignore my other personalities (Voobner, Sparky, Recradiocbpolice, Coaxlengthpolice, JJ, and Auntikeyclown) inasmuch as they may engage others in discussion. I am approaching you as one adult to another, so I ask that you keep this agreement between us and not publish this on the newsgroup.

Sincerely,
Frank
"Aaron"

Randy,

If you actually believe that I am Sparky, Recradiocbpolice, Coaxlengthpolice, JJ, and Auntikeyclown, then you resemble a largemouth bass with its jaws open. We hooked you once already. I'd hate to see you flopping around on the deck again. Why not smarten up. Waving that spoof letter around only makes you appear more foolish.

I normally don't reply to profane outbursts. BUT...(one "T" only)

> Why do you ASSume he is a cber?

Jeez, I don't think I said he was a CBer.

>IT IS perfectally legal for him to own/repair/use IF he has
>the proper credentials.

So why is he asking for help in a CB group from people who don't "have
the proper credentials"? Why doesn't he ask for help in a ham group,
among people who do have "the proper credentials"?

>Do you actually think he gives a flying F#$K what you or....

Blah, blah, blah. Read the rules again.

Whatever. coil where the band switch hooks to, that coil is tapped for 10 meters and if your running the amp on 11 meters and that coil is tapped for 10, your gonna run into problems, end of discussion... I didn't get all proper words right, but I know what I'm talking about...

Sheeeeeeeeeeeeeeeeeeesh!

Thanks skipp
Thanks for the site I downloaded the info on the Maco 300. Boy that
surly answered alot of questions. I have to find two tube sockets and
redo the parasitic chokes. Who ever did this amp had 1 2057 driving 4
2057s. The amp would dead key 300 with real crummy audio. The amp
shows 2 6lb6s driving 5 8950s. I guess the 8950 can be replaced by the
2057. I need to find the data sheets on these tubes. anyway thanks
Oris
Still looking for the info on the MaCo 1 KW
I am a firm beleiver in the 100% Amatuer Radio annexation of the
11-meter band!

1930. WHEN BILL GATES DIES...ICECOLD

Newsgroup: rec.radio.cb
Date: 2002-06-19 03:01:27 UTC

"Well, Bill," said God, "I'm really confused on this one. I'm not sure whether to send you to Heaven or Hell! After all, you helped society enormously by putting a computer in almost every home in the world, and yet you created that ghastly Windows. I'm going to do something I've never done before. I'm going to let you decide where you want to go!"
Mr. Gates replied, "Well, thanks, God. What's the difference between the two?"
God said, "You can take a peek at both places briefly if it will help you decide. Shall we look at Hell first?"
"Sure!" said Bill. "Let's go!" Bill was amazed! He saw a clean, white sandy beach with clear waters.
There were thousands of beautiful women running around, laying in the water, laughing and frolicking about. The sun was shining and the temperature was just perfect! Bill said, "This is great! If this is Hell, I
can't wait to see Heaven!"
To which God replied, "Let's go!" and off they went. Bill saw puffy white clouds in a beautiful blue sky with angels rifting about playing harps and singing. It was nice, but surely not as enticing as Hell. Mr. Gates thought for only a brief moment and rendered his decision.
"God, I do believe I would like to go to Hell."
"As you desire," said God.
Two weeks later, God decided to check up on the late billionaire to see how things were going. He found Bill shackled to a wall, screaming among the hot flames in a dark cave. He was being burned and tortured by demons. "How ya doin', Bill?" asked God. Bill responded with anguish and despair. "This is awful! This is not what I expected at all! What happened to the beach and the beautiful women playing
in the water?"
"Oh, THAT!" said God. "That was the screen saver!"

Definition of the SuperBowl
If 10,000 CB'er's are on the SuperBowl
then only 1000 can be heard some of the times
& only 100 can be heard most of the times
& only 10 can be heard all the time
This is a great example why the bowl is not for the weak!

For Suspect in Rampage, Depression, and an Arrest Record
By ANDY NEWMAN

bout a week before a rampage in the East Village in which the police say Steven Johnson shot three people and used kerosene and a lighter to terrorize a bar filled with hostages, he called his father in North Carolina.

"He seemed to be doing good," Samuel Johnson said yesterday. "I asked him if he had any problems, and he said `Yes,' but nothing he couldn't take care of."

Advertisement

The elder Mr. Johnson knew from his daughter Michelle that Steven, who the authorities say has a long arrest record, had been very upset by the recent death of his girlfriend from AIDS. "He'd been quite depressed since that woman died," Mr. Johnson said. "He could walk through the house, hear her voice talking, he could smell her."

On Saturday, Samuel Johnson said, Steven visited Michelle at her apartment a few blocks from his home in Williamsburg, Brooklyn. "He was in good spirits," Samuel Johnson said. "He was laughing."

Later that night, the police say, Steven Johnson, 34, carrying three guns, a sword, and a spray bottle of kerosene, shot a man on East 11th Street in Manhattan. He then stormed into a crowded wine bar shouting anti-white invective, took hostages, doused patrons with kerosene, and shot two more people before he was tackled by two women, the police said. Mr. Johnson was shot twice by the police who arrived during the mayhem. None of the injuries were life-threatening.

Law enforcement officials said drugs appeared to play a part in the explosion of violence. "He is a lifetime drug abuser and criminal for 20 years," one official said, adding that Mr. Johnson's arrest record dates back to 1982.

Mr. Johnson was once a sought-after barber in Williamsburg. But Luis Marrero, a barbershop owner, said that in recent years he refused to hire Mr. Johnson because he appeared to have been using crack.

In addition to dealing with the death of his girlfriend, the mother of his 10-year-old son, in March, Mr. Johnson has AIDS and may have learned this only recently, the authorities said. But no one could account for the rampage the police said he took part in, or for the comments witnesses reported him making, that he wanted to kill as many white people as he could. Half a dozen people who have known him over the past 20 years said that as far as they knew, Mr. Johnson, who is black, had not expressed anger toward whites.

Samuel Johnson, a retired bus mechanic, said his son had no love for schoolwork as a boy, but that he took a haircutting course at a vocational high school and found his niche.

"He used to cut my hair," Mr. Marrero said as he stood outside his Quikuts barbershop in Williamsburg. "He was real good." Mr. Johnson, he said, was one of the first in the neighborhood to master the shaved-side haircut known as the fade.

"Back in the day," said Andy Cardona, who works at another shop owned by Mr. Marrero, "people would say, `I'm going to go get my hair cut by Money Steve.' "

Fred Rodriguez, the owner of the Metro Flicks video store across the street from where Mr. Johnson once lived, said he had a different haircut almost every time he came in.

While friends described him as peaceful, Mr. Johnson had at least 10 arrests, for robbery, weapons possession and drugs, the police said. In 1999, he caused a disturbance in Orlando, Fla., and was charged with disorderly conduct and resisting arrest, the authorities said. His most recent arrest was a drug charge in Brooklyn in February.

Sometime before he left his apartment in a public housing building on Humboldt Street in Williamsburg over the weekend, Mr. Johnson scrawled on the wall, "Tell the boys in blue I won't be easy" and left what appeared to be a suicide note telling his son he loved him, the police said.

Around 2 a.m. Sunday, the police said, Mr. Johnson burst into Bar Veloce on Second Avenue in the East Village. As he barked out orders and threatened kerosene-soaked hostages with a lighter, a 23-year-old waitress named Ann-Margret Gidley said she jumped on him.

"I saw the headlines, `Sixteen people go up in flames,' " she said last night. "I thought to myself, `This is not what my mother's going to see tomorrow morning.' " She slid out of the plastic restraints he had put on her and pushed herself into him.

"The sheer force of me didn't knock him over, so I started hitting him," she said. "He fell to the ground face down, and everyone who had arms uncuffed just started grabbing at him."

Hi again everybody,

As a follow-up, I ran into something interesting. After exchanging a couple of e-mails with Bob Heil, a minor issue came to light. CB radios employ a DPDT switching circuit that disconnects the speaker in addition to grounding the PTT line and connecting the microphone. BTW, this is why the "unplugged mic" defense doesn't fly with the FCC when you tell them that you're just "monitoring" your modified CB radio and have no xmit capability. Mo mic, no sound. See below for the mic wiring diagrams.

Model: Grant XL
Standart wiring:
Pin1=Audio
Pin2=Shield
Pin3=Receive
Pin4=Switching Wire <<<=== The
Pin5=Transmit <<<=== Culprits.

Model: HR-2510
Standard wiring:
1-Audio
2-Shield
3-Transmit
4-Channel Up
5-Channel Down

So I'm wiring the mic to the President Lincoln instead, for the time being. The two radios have similar audio characteristics so I'll use that as a preliminary benchmark. Meanwhile, it shouldn't be too difficult to get the mic to work with the Grant's Pin3/Pin4 arrangement. Take care now.

:> http://www.cbtricks.com
:> cheers
:> skipp

: Thanks skipp
: Thanks for the site I downloaded the info on the Maco 300. Boy that
: surly answered alot of questions.

Its not my site, but you are welcome for the tip.... you can find some
of my stuff on the http://sonic.ucdavis.edu web server.

: I have to find two tube sockets and redo the parasitic chokes.

Shouldn't be that hard to do... sometimes small quanities are a pain to
deal with. The parasitic chokes should be about 3 turns 1/4 inch NiChrome
wire wound on a 1/4 " drill adjacent to a 100 ohm 3 watt MF resistor. The
actual inductance value is selected to cause the parasitic to slightly
heat at full power operation. The value is often much less than 100 nH.

: Who ever did this amp had 1 2057 driving 4 2057s.

Maco amps are/were "rude and crude." The 2057 tube is considered a
higher gain 8950 I don't feel the slightly higher gain was/is worth the
cost of the hard to find NOS 2057.

: The amp would dead key 300 with real crummy audio.

I'd check the operating potentials after a general inspection. You'll
probably find the bias value(s) are wrong or non existant. Unbypassed 10
MF resistors in each tubes cathode lead would improve operational
linearity.

: The amp shows 2 6lb6s driving 5 8950s.

In a properly done layout, the 2 driving 5 layout should output over 350
watts carrier into 50 ohms, clean.

: I guess the 8950 can be replaced by the 2057.

If you pay attention to the higher gain of the 2057... most of the time,
it's not needed in typical AB2 operation. Many amplifiers use sweep tubes
in AB2 layouts... I've found poor engineering of many sweep tube
amplifiers cause big time problems with higher gain AB1 circuits.

: I need to find the data sheets on these tubes.

The 8950 spec sheet should be on the web. The 2057 was a Maco special and
maybe a few other mfgrs tube, not worth the effort vs the money you would
spend to find/buy NOS tubes.

: anyway thanks
: Oris
: Still looking for the info on the MaCo 1 KW
: I am a firm beleiver in the 100% Amatuer Radio annexation of the
: 11-meter band!

Not much would change. There are also many "Alpha Hotels" on the Amateur Bands.

cheers
skipp

ok guys,all we gotta do is get the builders of these amps to build them so they will take a 50 watt input,and we will have amps to buy for years to come! :) after all,a 10 watt export radio will drive a 50 watt input amp very nicely! you wont get "full" out put,but the amp will run cooler,last longer,and itll be legal for the sites to sell them,as long as they are listed as for ham use only!! dont yah just love it?!!!! sounds like a plan to me.......elpasogunslinger

Regardless of this guy's background, what he did was inexcusable, and I wonder if he'll be charged with a "hate crime".

This whole thread is stupid, and has no place in any of our newsgroups. The original poster should have his ass kicked for the subject that he posted. If he wanted to pass on some news, he definitely is going about it in an ignorant manner.

A wife asks her husband, "Honey, if I died, would you remarry?"
"After a considerable period of grieving, I guess I would. We all need companionship."

"If I died and you remarried," the wife asks, "would she live in this house?"
"We've spent a lot of money getting this house just the way we want it.
I'm not going to get rid of my house. I guess she would."

"If I died and you remarried, and she lived in this house," the wife asks, "would she sleep in our bed?"
"Well, the bed is brand new, and it cost us $2,000. It's going to last a long time, so I guess she would."

"If I died and you remarried, and she lived in this house and slept in our bed, would she use my golf clubs?"
"Oh, no," the husband replies. "She's left-handed."

It seems a farm boy accidentally overturned his wagon-load of corn. The farmer who lived nearby heard the noise.

"Hey Willis!!" the farmer yelled. "Forget your troubles. Come in with us. Then I'll help you get the wagon up."
"That's mighty nice of you, " Willis answered, "but I don't think Pa would like me to."

"Aw, come on," the farmer insisted.
"Well okay," the boy finally agreed, and added, "but Pa won't like it."

After a hearty dinner, Willis thanked his host. "I feel a lot better now, but I know Pa is going to be real upset."
"Don't be foolish !" the neighbor said with a smile. "By the way, where is your Pa?"

"Under the wagon!" replied the boy.

Little Johnny, burst into the house, crying his eyes out.
He was blathering so bad,his mother could barely make out the
gibberish he was bluting out.

His Mama told him to slow down and asked him what the problem was.
"Well, Dad and I were fishing, and he hooked a giant fish. It was
REALLY HUGE.
Then, while reeling it in, the line busted and the fish got away!"
said Johnny.

Well, Johnny," his mother said, "a big boy like you shouldn't be
crying
about an stupid accident like that. You should have laughed about it."

"That's what I did, Mama.. that's what I did!"

Three lawyers and three engineers were traveling by train to the same meeting.
At the station, the lawyers each buy a ticket but the engineers buy just one.
When asked why, the engineers coyly said "You'll see."

They all board the train, the lawyers taking seats, but the three engineers all crowding into the bathroom. After the train has left, the conductor comes around and takes the lawyers tickets and knocks on the bathroom door and says, "Ticket Please."
An arm stretches out from the bathroom and the conductor takes the proffered ticket. The lawyers were very impressed.

On the return trip, the lawyers proposed to emulate the gearheads and bought only one ticket.
To their amazement, the engineers bought no ticket at all. When asked, the engineers said, "You'll see."

All board the train and the lawyers and engineers cram into seperate bathrooms to await the conductor.
After a few minutes, one of the gearheads emerges from the bathroom, goes over to the lawyers bathroom, knocks on the door and says:
"Ticket please."

They not only offer them on there web site but in there catalogue.

It's a wonder the FCC doesn't put them out of business. I do understand they where fined recently for modifying radios for for use on frequencies in the ham and cb bands.

Wasn't me, Randy. I've been too busy to mess around in my chemistry lab. Regardless, ricin wouldn't be my first choice, even though the KGB used ricin a couple times for assinations (Hungarian defectors, I think, and delivered with an osmium-iridium pellet). It's action is too slow and too easily detected (doesn't work by ingestion so it must be injected subcutaneously, and the point of injection becomes severely inflamed before the onset of other symptoms). No, one of my first choices would probably be the simple alkaloid aconitine (from Aconitum Napellus, or common Monkshood). Very fast in it's action, it's a true "drop-dead" poison in a very small dose. Another would be an extract from from the botulism bacteria. Very nasty, and I wouldn't even mess with that stuff without some serious facilities.

I should point out to anyone considering such stupidity that there is no poison that can escape detection by the gas-chromatograph.

Regardless, poison isn't my bag -- it's the weapon of cowards. I have never had a problem with meeting my enemies face-to-face, even when I was at a disadvantage, simply because most of the time THEY are the cowards and can't deal with the concept of a fair fight. That's really too bad, because the few that didn't tuck tail and run have earned my respect. One of them is now one of my best friends.

Unlike you, I was raised to believe that integrity is important. There
is no integrity in anonymity, because you can never be held to your
own standard of "absolute responsibility" for what you say. What you
think is obsessive behavior is actually a very effective method of
discreditation. It works so well, in fact, that nobody in the
newsgroup takes anything you say seriously (nobody with integrity,
that is).

>=A0=A0Besides, if someone is seeking me they can walk/crawl/drive right

You certainly care little about reality.

> You wish to meet me, you come
>to me.

No thanks. I find the weather down there too hot and humid. Camp Lejeune was bad enough, Ft. Gordon was worse, but Florida must really suck! Besides, I really have no interest in meeting you, I was just curious to see if you could back up your bullshit about being a professional journalist. You have had many, many months to do so, but so far no proof. Matter of fact, there is no proof anywhere of anything you have ever claimed. Since work is really picking up around here, I don't see any reason to waste any more time toying with you.

Bye bye, twistie.

>acts of choreographed criminality and subterfuge.

In case you didn't notice, my first response in this thread was
regarding your misrepresentation that I am Voobner, not Muenzler's
unsubstantiated claims, nor your unsubstantiated refutation of the
same.

>>Instead they make arbitrary name associations with total "disregard"
>of any evidence to the contrary.<<
>
>Hey, when you're right you;'re right, and there is some truth to what
>you say, but it wasn't what was being presented. Your posts are like cow
>pies, all over the place.
>Presenting it in a context offering a differing view than what you hold
>is a sure way to lend even more credibility to what you set forth. Your
>assuming concept of a legality not being "comprehended"

What?!?!?!? The only thing I said was that you are an idiot for
jumping on the Voobner = Sparky bandwagon! What does being open and
honest about one's identity have to do with "legality not being
'comprehended'"?

> is another of
>your many errs, in and of itself, as certain aspects of it are
>selectively "disregarded",

Do you mean "disregarded" like you taking my words out-of-context?
Hell, that wasn't just out-of-context, it wasn't even -close- to
anything I said.

> having nothing to do with arbitrary names on
>cb, which in essence, are nothing but handles, therefore, anonymous.

Handles are not necessarily anonymous. Everyone that knows my handle
also knows my name. That's not anonymous. Your argument is lame.

>I know it pains you, but Muenzler needs more than you can offer him,
>Frank.

Muenzler needs nothing from me. You, otoh, could learn some things
from -him- about integrity. Matter of fact, you could even learn the
same lessons from Randy -- he may be an ass (and I'm sure he thinks
the same of me), but at least he has enough integrity to put his name
to his words. And that's a mighty high step above your interpretation
of "absolute responsibility".

The full-length (102") 1/4 wave whip is hard to beat for an antenna.
Yes you will need a spring. But I would suggest getting a second
antenna of smaller size while driving -- the top of your 102" whip is
going to be hitting a lot of bridges, trees, and maybe even power
lines if you mount it on the roof.

I believe that the 50 watt requirement is for "significant output". In other words, requiring a minimum of 50 watts drive.

Ready for a chuckle? Actually, it is currently illegal to manufacture
ANY amplifier capable of operation between (approximate range, I'm not
going to look it up) 24 and 30 MHz. Amateur amplifiers obtained from
legitimate sources have 10 and 12 meters disabled. The vendor then
sends instructions to enable 10 and 12 meters to licensed amateurs! So,
there shouldn't exist any 10 meter amps (in theory). Now, go get a
towel to dry up those tears streaming down your face (at least once you
get over laughing!).

No, no, no. I mean, I AM a master baiter, been doing it for so many years I can do it blindfolded and in my sleep, but the bait shop biz is a commodity biz and I'm not into loss. One good storm can mess things up for weeks. I do have quite a nice line of lures and artificial baits though, (Don't bother with Ebay, tried it once and immediately found greener pastures) but they only work in the south in states such as Fl.,Texas, Ala, Ga, SC, La, NC, TN and maybe a few others due their huge size and the north's paltry bass. If you pulled in one of my lures you would think you caught dinner, Aaron. Why not just come down and I'll give you the tour myself? Is it because you're not a fish eater and adhere strictly to beef?

Twitsie, I must say this was one of your better posts I am impressed.

I think twisty is twisting my words. I don't believe I ever said successfully prosecuted I said "busts." If I did then it was misleading and unintentional. All I can say that MANY (sadly) were hams. It's amazing what happens to some people when they get their Extra Class license. It's like they get stupid or something. They think that the FCC isn't going to mess with them because they have "topped out" in their license. It's a BIG eye opener for them! There are almost as many Extra Class hams busted as the rest combined! SAD!

It was me and 14 other FCC Official Observers who work the San Antonio/South Texas area. Once we track the person down using direction finding equipment, using Audio recording and such we turn all of the information over to the ARRL who turns if over the FCC. We turned over information to about 35 people since December and there are 27 that I know of that are either on their way to court, in court or have been through court. Yes, it's very expensive for them even if the are found "not guilty." No I'm not going to give you names, that's illegal. But if you want to spend the money you can look them up yourself. Most are being prosecuted at the Fifth Circuit in San Antonio or Dallas.

1970. CB projects

Newsgroup: rec.radio.cb
Date: 2002-06-19 20:26:20 UTC
From: vshah101@aol.com
Message-ID: <20020619162620.23733.00001067@mb-df.aol.com>
Source record: 127821

Any CBer's out there interested in working on some projects?

I have designed a transmitter for SW frequency. It works fairly well. I am working on designing a 27MHz (CB frequency) transmitter and other interesting projects.

I wanted to check out a Ham Radio club, believing they were interested in similar activities. It was disappointing to say the least. If Ham Radio lived up to even half its hype, it would be pretty interesting. My advice would be to get the licence, but then not be a Ham.

Trying to find Hams that are inclusive to the technical side (or even the operations side) is an exercise in futility. The only way to learn about the operational side seems to be buying your own equipment. But this is expensive, and why have a club if one cannot share experiences? Sometimes I just want to learn one aspect (for example APRS), but not use it all the time. Buying the equipment is then too expensive.

To be fair, I did have some opportunities to do some antenna installations. Also, Field Day is a good opportunity as well. But these opportunities occur too infrequently.

I do not consider myself a Ham. Being a Ham is following Ham traditions as much as getting the licence. Hams like to "Contest". This means contacting as many people within a given time period. While it may be interesting to contact someone from another country, the idea of rapid fire contacts does not interest me. Ham awards seem to emphacize volume over skill level. For example, there are awards for contacting every state ("Worked All States"). Also, I do not care for all the terminology that Hams use. Hams regularly use Ham lingo in their conversation. If my initial introduction was through Ham radio, I would have though this is boring or silly, and would have been doing something very different.

I am with the true spirit of CB operation. Mobile operation is interesting to me. I love the idea of doing something technical and how that fits together with operation. I liked doing calibrations and doing field tests. Its what got me interested in this area. I also like the adventourous aspect of radio direction finding and getting transmitters to work in various locations. I like working on on radio electronics circuits and setting up antennas.

Some of your ideas sound interesting, have you considered playing with
the "lowfer" band?

And on amateurs, not all of us are into contesting, many like myself like to "ragchew", meet new people, and make new friends, and many of us are interested in techichal discussions, I am working with some of the clubs to organize a project night, to work with the newer hams to build antennas, and to built different projects.

I did not mean this to start into a pi$$ing match, I enjoy the hobby, and was an avid CBer for years, and still get on the CB and talk to my friends, it just so happens I have my amateur ticket as well, and I keep them seperate, when I am on ham bands I am a ham, when I am on cb I am a CBer, but on both bands I try to be polite, and follow the rules.

Good luck sir in your endeavors to enjoy your hobby.

Step one: hook up the antenna.

I like
> working on on radio electronics circuits and setting up antennas.

You may well have the right idea: get the ticket for the freedom to futz around and go out and futz around. Putting your homebrew on 27MHz simply ain't legal but put it on 24.9 or 28+ and no one really cares if it is reasonably technically competant.

Amateur Radio is and always has been 489 hobbies under one aegis. Contesting and number collecting is not my schtick, building used to be more than it is now -- bifocals do not make it easier. Antennas are my love and I have been jilted enough times to prove it.

Part of the game is contacts: I just had lunch with a guy who was a TV engineer and a First Telegraph holder which required sea time. Also in the group was a guy who installed ILS gear at any number of airports. An old guy crazy as a bedbug wandered in who probably knows more about mobile antennas than I will ever suspect. None are club members of anything so far as I know; like Mycroft Holmes, some men are unclubbable. Rosin-heads tend to be unsocial people until you get to know them. And one generally goes to club meetings for the coffee hour afterwards, really.

Did you hear about the guy on the news today in Spokane? He was arrested for allegedly making some sort of bio-weapon with Ricin, the toxic component of Castor beans. Hope Sparky doesn't know him. I'm sure AKC has considered something along the lines of this to squelch the majority on the NG.

Some of us saw this mic a few months ago when they were trying to come up with a name for it. With the demise of the Silver Eagle, this will be one of the few worth looking at buying. Other than the octagonal head it is also a few inches SHORTER than a D-104. If I remember this one right, it is made by Workman.

There are MANY hams that are much more into the technical aspects of radio than you would suspect; club meetings generally aren't the place to find them. If you have a scanner, monitor the repeaters - especially later evenings (after the usual traffic stuff during rush hour and the milk and eggs runs that folks will make). There will be a lot of discussions concerning just about everything from internet to microwaves. I even had a discussion (at 2:30 AM local time, no less!) with a professor of theoretical physics on that subject. I was quite interested and, as I admitted as to having taken calculus, he suggested that I register for the class! Yeah, right. Myself, I've probably exchanged less than a dozen QSL cards since getting my novice license back in 1962. Not interested in contests. I used to rag chew on teletype with Norm, VK2NP, in Brisbane Austalia, once or twice a week for hours on end. No QSLs, just fun. There is a lot of mobile operation - mostly on VHF/UHF, but some on HF as well. Even down on 75 meters! Perhaps a few even venture down on 160. I've used my HT to talk to Australia and England - courtesy of a 10 meter port on one of the UHF repeaters I use. All rf path and no QSLs. Just fun. Contests are just one of many facets of amateur radio. As to building your own, you certainly can, but I doubt one could build any given level of radio as cheaply as you can buy one. You could go for a kit (despite the demise of Heathkit, there are manufacturers out there for HF rigs). BTW, a couple of guys achieved moonbounce running only around 85 watts recently. Now there is an example of some good solder-heads achieving something of note. Antennas can be had, cheap. A co-worker of mine wanted someone to take her 12 foot dish (remember those in the early days of satellite television?). The thing ended up in the dump. It might have been interesting on 440 or 900 MHz. BTW, Ed Hare put an interesting post in rec.radio.amateur.policy concerning digital signal processing. Go check it out. He has posted a URL where you can listen to a CW signal (IF you can hear it in the noise). It can be deciphered using digital techniques. PSK-31 and other modes can be copied WELL below the noise level using digital techniques. Interesting stuff - and all you need besides a radio is your computer and a sound card.

How do you set the RS mobile to 2 watts?

Randy

1998. what CB to buy???

Newsgroup: rec.radio.cb
Date: 2002-06-20 00:15:46 UTC
From: Dave Schultz <davidschultz@earthlink.nospam.was.net>
Message-ID: <S89Q8.6085$Fv1.639339@newsread2.prod.itd.earthlink.net>
Source record: 127898

I need advice concerning what CB radio to buy.

I plan on traveling across country frequently and already have twin Firestik
5 foot antennas installed on my truck.

I have been considering the following brands/models:

AM/SSB Galaxy DX949...Midland 79-290...Texas Ranger 969WX...Uniden Grant
LT
AM Cherokee CM10 Plus...Uniden PC78LTW

Is it worth getting a Sideband rig? I might consider putting one in the
wife's car if the range is much better.

I would like the WX feature on the radio also. How well do they work?

Thanks for the help.

Careful, you are using a pretty wide brush there.

There are many Hams who do not care for contesting.

WAS is a skill level task, especially if you do so on just one band. It
becomes even more difficult of you live on one coast or the other. For
example, trying to get a contact in Rhode Island from the West Coast is
very difficult - even when conditions are good.

Yes, just like CB, many Hams use a "lingo". On the other hand, there are
many in both groups that just speak the same as they do in everyday life.
It all depends on the person.

> I am with the true spirit of CB operation. Mobile operation is interesting to

Don't think that all Hams are appliance operators, just because those you
met seem to be. There are many that are very involved with the experimental
aspects of the hobby - as well as the research/analysis tasks.

Open the case and you'll find a blue pot labeled "low pwr" or
something similar. Connect a power meter and dummy load and adjust
the pot till you get 2 watts. Power can be set anywhere from almost
nothing to 5 watts.

>
> Kevin, WB5RUE

Back in our farming days, we didn't have any castrated bulls for the usual
reasons. If
they were useless for breeding, they usually found a place in the freezer or
salt shed...
read as on the dinner table. Some bulls were pretty gentle as long as you
didn't bother
them. Others would charge at the drop of a hat! Trick was, of course, to
know which
ones would tolerate your taking a shortcut across the pasture to the
swimmin' hole and
which ones would get after you. A neighbor up the road had a milk cow that
was as
ornery as any bull. She was a long horn with those horns coming almost out
the side
of her head--I never understood why they didn't cut those damn things off.
"Booger"
was her name, and she earned every single letter in it, too! Now, Mrs.
Morgan could
walk right in, grab her by one of those horns, and lead her anywhere. If she
acted fidget-
ty, she'd grab her and shake her and yell, "NOW HEAH!! YOU SETTLE DOWN!!"
By cracky, she'd calm right down. Let anyone else come in the pasture and
she'd run
you. Even MR. Morgan had to somersault over the fence one day because
Booger
slipped up on him (he thought she was down in the lower pasture). She
likened to've hooked him, too!! Now, their son, Charles, and I, used to
play in the barn swinging
on a rope across the two lofts. Dangerous enough as is, but a couple times,
when we
thought Booger was down in the other pasture, she came in the barn and
trapped us

in the loft. Then there was a big argument as to who was going to go down the ladder,
which was in one of the stalls, and shut the door so we could dig out under the timbers
and make a run for the fence! I lost, so I crept softly down the ladder shaking in my
shoes while Charles tried to distract the cow. Just as I reached the door, the cow heard me, wheeled and charged. I slammed the stall door shut, and the cow hit the door--
BANG! Good thing the door closed inwards towards the stall, or I couldn've held it
shut.

My last run-in with Booger was, again, in the pasture when we thought she had been
locked in the lower field. We were kicking a ball around when, all at once, here came
Booger. Charles and I took off for the gate with Booger hard after us. The gate butted
up against a crepe myrtle tree (you yankees might not have those LOL) that had a fork
in it. I quickly outran Charles and dove thru the split at flank speed. Charles was wearing overalls, and got his "galluses" hung up on a limb. As I frantically tried to help
him get loose, Booger bore down on us at full speed. I remember Charles screaming
at the top of his lungs, and in staccato fashion, "
Mamamamamamamamamama--Booger-booger-booger-booger-booger--Mamamamamamamamama
ma--Booger-booger-booger-booger-booger!!" Then the cow did a strange thing. She came to an
abrupt halt, looked at Charles curiously, and just moooooed at him! She made no effort
to hurt him! Since those long ago years in the late '50s, I have often wondered if she only chased people that would run from her (which was everybody but Mrs. Morgan),
and what she'd have done if, instead of running, one would have smacked her with a
stick!

Still don't know what you're talking about, but that's OK. Lots of
people in this NG spend their time fantasizing things about me. Why
should you be any different?

>>> If not respecting malicious a radio jammer is being a killjoy,
then
>>> count me in as a life member.

Darn, I mistyped that and you missed it. Not very observant of you.
Here it is corrected: "If not respecting a malicious radio jammer is
being a killjoy, then count me in as a life member". I really mean it.
Anyone who'd take pleasure in jamming phone conversations needs to be
spanked by the authorities.

>
>You, sir, need to see a psychiatrist about your chronic unhappiness.

You have to be kidding, right Aaron? Do you remember your sole existence in
life? Screwing with NG posters. I'm sure you do other things tho...go to the
bathroom, eat, but all in all, this NG is your life.

Find another angle.

The requirements to obtain a ham license are so easy now there is
no reason for a new class of ham license. Anyone who wants more
than what the garbage cb band has to offer and can't/won't put
forth a little effort to meet the requirements for a ham license
doesn't need to be on the air anyway.

Moparholic,
No, I'm not too lazy, and I do know how. I may
be mistaken, but I figured most people here would
have enough short term memory to remember what the
topic was. For those with inadequate short term
memory, simply back-track the post, follow the 'tree'
back to the post I was responding to. Now, is that
too difficult for you?
'Doc

Bill,
I don't believe I've ever seen the input, or
drive power specified in any rules about making
or selling amplifiers. Whether an amplifier
requires 10 watts, 50 watts, or 500 watts input
to drive it, makes no difference as to it's
legality. Specifically, where did you see this?

God, you Define the word ASSHOLE....

A good reason for asking in a cb group might be, the Amplifier was
ORIGINALLY intended for that market, and most probably ended up there,
however where they end up in modern times ....

The fellow asked for a schematic, lol......

>antenna?

I don't bother mounting antennas when I go camping with my
girlfriend...

> Anything?

Enjoy the outdoors while you have the opportunity. Take nature walks,
bring along a book on edible plants and taste the local cuisine, dig
the camera out of the closet and photograph the resident fauna, then
sit by a campfire and roast marshmallows until it gets cold, then warm
each other up. Don't waste such valuable time on a CB radio!

Oh yeah, DON'T PICK THE MUSHROOMS!!!

no confusion here! I am friends with a radio dealer and he got a couple SS's about a year ago from SuperStar to "test and report" he handed it to me and told me to let him know what I though about it. After about a week, I had to report that keying the SS was easier than my D-104 and that people thought that I had installed "power" LOL I dont use use amps. But anyway, I do love this mic.

Cool! Just remember, your 27 MHz must fall within Part 15 to be legal.
This is a good concept and you don't want to tarnish it by giving the
naysayers any ammunition.

> I wanted to check out a Ham Radio club, believing they were interested in
> similar activities. It was disappointing to say the least. If Ham Radio lived
> up to even half its hype, it would be pretty interesting. My advice would be

You went to the wrong AR club. I made the same mistake many years ago
and ended up cheating myself for looking no further. Don't give up,
find another.

> Trying to find Hams that are inclusive to the technical side (or even the
> operations side) is an exercise in futility. The only way to learn about the

Find another club!

> To be fair, I did have some opportunities to do some antenna installations.
> Also, Field Day is a good opportunity as well. But these opportunities occur
> too infrequently.

Now you're talking. (Book title?)

> I do not consider myself a Ham. Being a Ham is following Ham traditions as much
> as getting the licence.

Being a ham is what YOU make of it. There's no hard-coded definition
of what being a ham is. YOU are the defining dynamic.

> Hams like to "Contest". This means contacting as many
> people within a given time period. While it may be interesting to contact
> someone from another country, the idea of rapid fire contacts does not interest
> me. Ham awards seem to emphacize volume over skill level. For example, there
> are awards for contacting every state ("Worked All States").

I loathe contests. Doesn't make me any more or les an ARO. I like to
ragchew and I DX with "targets of opportunity."

> Also, I do not
> care for all the terminology that Hams use. Hams regularly use Ham lingo in
> their conversation.

To each their own. You can find some odd lingo on 11-meters too. The
most glaring examples are the misuse of QRT (and on the side?!) and
"first personal here is..." On 2-meters, I've heard mobile ops getting
"destinated." Life's too short to sweat the small stuff, much less the
INCREDIBLY small stuff. Talk like you would if you were having a
face-to-face conversation and you'll be fine, no matter where you're
operating.

> If my initial introduction was through Ham radio, I would
> have though this is boring or silly, and would have been doing something very
> different.

There so many facets to AR, don't forsake one for another.

> I am with the true spirit of CB operation. Mobile operation is interesting to
> me. I love the idea of doing something technical and how that fits together
> with operation. I liked doing calibrations and doing field tests. Its what got
> me interested in this area. I also like the adventourous aspect of radio
> direction finding and getting transmitters to work in various locations. I like
> working on on radio electronics circuits and setting up antennas.

The challenge of 11-meter "hobby" radio has always been to get the
most from the least. I chose to maximize my antenna's performance
while minimizing feedline losses wherever I could. I've gotten an
attitude here and there from folks who can't understand why someone
would expend such an effort into 11-meters when AR is available. It's
difficult to put into words and it's usually a path toward AR anyway,
so don't sweat it. Such is it with "passions." Don't give up on either
and the best of luck to you. :-)

From: wb5rue@yahoo.com (Kevin Muenzler, WB5RUE)
>I think twisty is twisting my words. I don't believe I ever said successfully prosecuted I said "busts." If I did then it was misleading and unintentional. <<

I thought this was a lark, BUT since you are now putting it forward as truth, you did indeed say BUSTS, but you also said they were getting hit in the wallet (fines) which would lead to the question of WHO was imposing these fines. If there is no prosecutorial involved, there would be no fines.

> All I can say that MANY (sadly) were hams. <<

Why is that ALL you can say? Why can't you elaborate, after all you mentioned 27 pops resulting in fines, did you not?

>It's amazing what happens to some people when they get their Extra Class license. It's like they get stupid or something. They think that the FCC isn't going to mess with them because they have "topped out" in their license. It's a BIG eye opener for them! There are almost as many Extra Class hams busted as the rest combined! SAD!
It was me and 14 other FCC Official Observers who work the San Antonio/South Texas area.<<

Oh, man. This gets better by the day. You sure you don't want to reword that last sentence, 'cause I can say for absolute certainty that as of right now there are only 54 active "field agents" in the country, and you are claiming 14 of them in Texas? And that YOU worked with them to bust hammies/cbers? Don't think so.
But wait a second, you didn;t say "field agents', you claimed they were "Official FCC observers".....who coined that term, and what exactly is it?

> Once we track the person down using direction finding equipment, using Audio recording and such we turn all of the information over to the ARRL who turns if over the FCC.<<

Way too many flaws in this..to begin with, you can be lying through your wazoo of what FREQUENCY the tapes were made on..the feds have to catch you themselves.
Even if the feds receive complaints from the ARRL, which may or may not trigger an investigation based on 2 main critierias..safety and number of complaints, no way will they be made to appear in a court room without at least several months gone by and several attempts at contact by the feds which go ignored.

> We turned over information to about 35 people since December and there are 27 that I know of that are either on their way to court,<<

Keep digging.

> in court or have been through court. Yes, it's very expensive for them even if the are found "not guilty." No I'm not going to give you names, that's illegal. <<

No, it's not at all illegal to give their names,
but seeing how you already claimed they were busted and fined, that in and of itself can possibly lead to legal trouble if you name names if what you claim never actually took place. In lieu of that, I can see why you would be reluctant to say anymore.

>But if you want to spend the money you can look them up yourself. Most are being prosecuted at the Fifth Circuit in San Antonio or Dallas.<<

It can be done for free.
Let me get this straight...
the FCC is already prosecuting 2002 complaints from the ARRL in circuit court in Texas? Go on, now.

>Kevin, WB5RUE<<

Chuck,
Then I'd have to say it's about time you quit 'messing'
with amplifiers and learn something about them. I have no
idea if I know more about amplifiers than you do. I do know
that in this case you're mistaken. If that upsets you, then
I'm sorry, there's just not a lot I can do about it...
'Doc

PS - As to your other request, I'm not interested.

Hello Oris:

I have checked my old schmatics and I don't have a copy of the MaCo Amp.

But reading the other postings here I see you found a sounrce with
Skipp's help, good deal. And you guys even got old weak dick aaron all
wrapped around the axel at the same time, good going, I love this news
group.

I sort of miss the country life, tho we didn't have a whole lot of things that people call
"necessities" today. We didn't go hungry, we had clothes, but just what we HAD to have. Sunday often meant a chicken killed on Saturday. Breakfast was eggs from our
own henhouse. We ate REAL butter, and scarcely knew what margerine was. TV was black and white with rabbit ears, and we got 2-maybe3-channels. We plowed with
a Model G John Deere tractor, and I still love to hear that old POP_POP_POP engine
at tractor shows and meets. Combining was a dreaded activity because I was allergic to
the dust, but the combine was pulled behind the JD tractor, was open platform, and we
kids rode up there removing the sacks of grain from the chute and throwing them over
the side. We planted corn, potatoes, beans, peanuts, squash, peppers, and peas--some to sell, some to stock up for winter by "canning". Sometimes Daddy actually preferred to plow with a horse and had a whole compliment of horse-drawn turn plows and culti-
vators. We would drive a stake with a flag on it at each end of the rows, and try to keep the horse lined up on the stake. Eventually, the horse would actually line up on that
stake and use it for a aiming point! That is, a GOOD plow horse. One of the horses was
hard to break to a plow. If he had been out to pasture for any length of time, he would
run with the plow! You'd think he would tire out pretty quickly, but he would drag Pop
down the rows at a wild speed with Daddy hollerin' "WHOA BACK! WHOA! Now GEE (go right)! WHOA! Now I said WHOA, daggone it!" Can you imagine that scene? The horse is running with a big turn plow, dirt flying everywhere, Dad taking
giant steps trying to keep up, and the rows as crooked as can be! Mom and I

would
giggle and laugh at Pop. By the time we got the horse to settle down to the plow, we
had all the rows done, crooked, but done! LOL!

On a farm there are a number of animals that might run after you. Of course cattle, then
roosters might fly up and "flog" you and spur you with their claws. If you had turkeys,
as some neighboring farms did, you had to watch the Toms. Getting flogged by a Tom
turkey was a really bad experience. Sows with piglets would run you if you messed with
her "chillun", and if they got out of the lot, they were hell to get back in. And, of course,
a boar hog was nothing to mess with, either. Ducks or Geese might chase you and pinch your heels or flog you with their wings. Some people kept goats, and Billies might
butt you and knock you down. Hens would peck you when you tried to gather their
eggs; I started slapping them off the nest when they did that. I'd raise one hand in the
air while reaching for the eggs with the other. They say that a hen is stupid and can't learn, but they "learned" that Jerry would smack the crap outta them if they pecked me.
I reckon I've been chased by about all of them. Of course, it's worse when you are a
10 year old kid. Oh, sometimes a horse would bite you. It didn't take much provo-cation for the ones that were prone to do that--just happen to not be paying attention
and OUCH-- WHY, YOU DIRTY FLEABAG @#$%&&*+^$#@~!!!!! I balled up
my fist and hit "Tony" once right in the nose for that. Those old flat teeth really hurt!

Life was hard compared to today, but we didn't know any better, so it didn't matter.
We kids grumbled about working, but if you grumbled too much, Dad would get a
strap after you. You had chores to do, and you did them before and after school.
All in all, it was a pretty good life, tho. And, as far as ornery animals, we learned which ones would get after you, and acted accordingly. Mainly by giving the chasers a wide
berth.

Jerry

Ernest,
I seriously doubt if it's blown finals. Sounds
more like RF feed back and maybe over driving the
amplifier. If you've had any of the filtering, AMC,
etc, 'clipped', restore them, they really are there
for a purpose...

Well I'm sorry you feel that way. Your right, some people don't want to take a test and 26.965 to 27.405 broken up in to 10 KHz steps is finefor them. What I find is what alot of what these folks are doing is illeagal. In my plan I try to kill to birds with one stone. Why shouldn't these folks be allowed on the air? There are 4 million or more of them. The ARRL is complaining about droping numbers in the ham ranks. Its close mind thinking that will destroy amatuer radio as well as the other services that the people use not government agencies or corprate giants. I think that anexing 100% of 11-meters this includes CBers as well as freebanders and it will help the amateur comunity not hurt it as well as introduce radio operation pleasure for the masses.

I had to put a 102" whip on my mirror mount of my motorhome, short ones would not give me any reasonable SWR readings for some reason. I need something to lash the whip close to the top of the motorhome so it doesn't ground out when I'm travelling. Anybody know of anything I can buy or build? I went to Radio Shack and they used to carry something like that but have discontinued it.

Source record: 127953

Amateur radio demands and expects discipline. Taking a minor 35 question exam which for the most part is common sense is a minor test of discipline in a rudamentory form. It can be studied for and passed in an afternoon by nearly anyone and certainly by a cb user of any experience. Since the test questions are readily available to anyone reading this, and free at that, and since few people would ever need to drive very far for an exam session, it is reasonable to presume that the guys on 11 meters who want to be licensed already have been - or that more to the point, they don't want to be.

Definition of the SuperBowl
If 10,000 CB'er's are on the SuperBowl
then only 1000 can be heard some of the times
& only 100 can be heard most of the times
& only 10 can be heard all the time
This is a great example why the bowl is not for the weak!

> peas--some to sell, some to stock up for winter by "canning".

It was always my job to hold the sack when we thrashed peanuts.
Never would have considered of wearing a sissy dust mask back
then, maybe a handkerchief tied around your mouth and nose like a
bandit.

> If you had turkeys, as some neighboring farms did, you had to watch the > Toms. Getting flogged by a Tom turkey was a really bad experience.

Dad decided to go into the turkey business and for several years
we raised 12,000 a year of these stupid birds. Dumbest things that
ever walked.

No It sounds like the deadkey is to low, He is getting no power then when he talks it is distorted the peak to carrier ratio is way to high turn up deadkey on the radio and Ill bet you 3 to one that is your problem.

Sorry if this is a doble post, But i am going with the 102" steel whip for my vehicle. Seeeing that a whip is really nothing technincal, Do u think it is OK to get this 102" whip from radio Shack. I hardly ever buy anything CB related from them, But i figured they can't screw up a whip. Also, think a spring is needed? I would be mounting it on my roof, almost dead center. Thanks

> is OK to get this 102" whip from radio Shack<

Don't know if they are closing them out every where but the radio Shack in my neck of the woods (Okla) has been closing out the 102 inch fiberglass whips for about $4.00. I purchased one about a month ago to use with an active amp for a shortwave receiver.

Considering the amount of "pure" CBers (CBers that are not also hams)
that would have the technical expertise, and then couple that with the
percentage of those people, who read this newsgroup, you're down to a
handful of people. And out of that handful, it seems that the project of
choice is amplification

>
> I have designed a transmitter for SW frequency. It works fairly well. I am
> working on designing a 27MHz (CB frequency) transmitter and other interesting
> projects.

Not to sound like the RF police, but building a transmitter for the CB
band would be illegal, unless you could get the FCC to certify it.

>
> I wanted to check out a Ham Radio club, believing they were interested in
> similar activities. It was disappointing to say the least. If Ham Radio lived
> up to even half its hype, it would be pretty interesting. My advice would be
> to get the licence, but then not be a Ham.

Many Ham clubs today have outlived their usefulness. Once upon a time
the ham club was a place that hams of modest means could pool together
their resources to provide opportunity for all the members to actively
operate and share information. Today many are nothing more than social
gatherings where the topic of conversation revolves around the nostalgia
of the "good old days". There are exceptions though. In my area we have
a club that specializes in 50 Mhz and up operation. The club is made up
of guys that work mostly in RF and microwave vocations. These guys have
cheap contacts for parts, and offer guidance for other members to build
and setup equipment for some of the more obscure bands (like 902 Mhz and
the microwave bands). Of cource they pool this expertise so they can
enter the VHF/UHF contests and score big. This is the only real turnoff
to me, and I abhore competition. I just like tinkering with radio.

>
> Trying to find Hams that are inclusive to the technical side (or even the
> operations side) is an exercise in futility.

That depends of where you look.

> The only way to learn about the operational side seems to be buying your own
> equipment. But this is expensive, and why have a club if one cannot share
> experiences?

That was the original intent of the ham club. But in today's society,
the emphasis is on the individual, and the ideals of cooperation,
sharing, and comeraderie seem to be going the same way as the tube
radio.

> Sometimes I just want to learn one aspect (for example APRS), but not use it all
> the time. Buying the equipment is then too expensive.

The internet is chock full of information of APRS.

> To be fair, I did have some opportunities to do some antenna installations.
> Also, Field Day is a good opportunity as well. But these opportunities occur
> too infrequently.
>
> I do not consider myself a Ham.

Then what are you? Do you have a license? If you do, then you are a
"ham".

> Being a Ham is following Ham traditions.....

No, being a ham is having a license to use the ham radio bands.

> Hams like to "Contest".

That's like saying black people only eat watermellon and fried chicken.
More accurately you could say that SOME hams like to contest. I, for one
have no love for contests or DXing for that matter.

> This means contacting as many
> people within a given time period. While it may be interesting to contact
> someone from another country, the idea of rapid fire contacts does not interest
> me.

Nor many other hams.

> Ham awards seem to emphacize volume over skill level.

If that bothers you, then you definitely want to stay away from CB, as
the "king of the pile" mentality is all too rampant. One of the biggest
"contests" that you'll find on CB, is the act of running as much power
as you can physically (and finacially) afford to run, in order to be
heard over other guys who are also kluging together what would amount to
a broadcast transmitter.

> For example, there are awards for contacting every state ("Worked All States").

And worked all countries, and DXCC, and all sorts of other awards. If
that's not your bag, then no one forces you to participate. Maybe you'd
rather help maintain the local VHF repeater, or build one from scratch
like I did.

> Also, I do not care for all the terminology that Hams use.

Any hobby that deals with technology, will have associated terminology
to go with it. That's pretty much a given. Look at the computer

industry, and look at all that terminology.

> Hams regularly use Ham lingo in their conversation.

Many Cbers do as well (10-4 good buddy!). But like contesting, no one forces you to. I speak plain English on ham and Cb radio.

>
> I am with the true spirit of CB operation.

And what is that? Considering the real purpose of the CB radio service was short range personal and business communication, there isn't much room for experimenting, if one wants to remain legal.

> Mobile operation is interesting to me. I love the idea of doing something
> technical and how that fits together with operation. I liked doing calibrations
> and doing field tests. Its what got me interested in this area. I also like the
> adventourous aspect of radio direction finding and getting transmitters to work
> in various locations. I like working on on radio electronics circuits and setting
> up antennas.

You sound like the perfect candidate for ham radio. All of this is addressed in one for or another in the amateur radio service.

CB radio is too full of "semi-technical" people that know a little, and BS their way through the rest, that you'll have a tough time finding any real meaningful advice or information. Much of what information that is out there is laced with "CB science", or "how the laws of physics magically change when the dial hits 27 Mhz".

Search the back threads from this newsgroup and see some of the far out topics that have been bandied about. I once had a guy here claim that by spraying one side of a loop with teflon spray, he could make it uni-directional. Then there are the endless debates about coax length, and whether the latest gizmo antenna will outperform a 108" whip, or howa manufacturer can claim that a halfwave vertical antenna, can have 9.9 db of gain.

Stick with ham radio if you are truly interested in learning about radio. You'll eventually find someone to "elmer" you. Hang around CB for too long and you might start believing that you can get 25 watts out of a Cobra 29......

ok ok well take one more stab at this. so we make the amps capable of a 50 watt input,then we install an easily removed jumper wire,so that the units are truly sold as non-workable 11 meter units. well include a small instruction guide to show how to remove the jumper to make it an 11 meter amp.(purely for scientific/research purposes only) this would absolve the manufacturer/seller of all liability,and place the penalty for mis-use of the product squarely on the shoulders of the end user.
just as ham radios (kenwoods,yaesu,icom) are all sold with circuitry that is capable of of being "modified", with no apparent liability for the factory,it would be the same with these amps. pretty cool idea...huh?? everybody happy with that take on it?? elpasogunslinger

For clarity here are my exact words:

"I'd love to but I'm a bit busy putting the financial hurt on those in my area, so far 27 this year. Some of them are (were) hams. It's much easier than you think. I'm sure that if the FCC was standing in front of your house you wouldn't be so "brave" as to make freebanding claims. Yeah! You're a man! But you'd surly be crying if you were standing in court. I see it happen all of the time. Guys make big claims of how big their amp is until the FCC marshal is holding it in his arms. Then the guy is crying like a baby. I'm sure you'd be no different."

>in the wallet (fines) which would lead to the question of WHO was
>imposing these fines. If there is no prosecutorial involved, there would
>be no fines.

I don't think I said "busted" anywhere in that post. I never took personal credit for making any arrests. Nowhere did I say fines either. I could file suit against you for whatever reason I can think of, "you're ugly and your Mamma dresses you funny" is a good enough reason. Not that it would go anywhere, this state has laws against frivolous lawsuits so it would cost me more than it would you, but you would have to hire an attorney to answer the suit or charges. That's exactly how any criminal/civil charge works. Every one of these clowns had to hire a lawyer to defend him in court. That's where the "financial hurt" begins. Even if the guys don't hire attorneys there are court costs.

>> All I can say that MANY (sadly) were hams. <<
>
>Why is that ALL you can say? Why can't you elaborate, after all you
>mentioned 27 pops resulting in fines, did you not?

I said nothing about fines. Again you are twisting my words and putting new ones in there. I can't elaborate because YES it is against the law for me to give any information about the trial/pending trial until it is finished. Remember, these are FEDERAL cases.

>But wait a second, you didn;t say "field agents', you claimed they were
>"Official FCC observers".....who coined that term, and what exactly is
>it?

Did I say "field agents?" Nope, no need to reword that last statement. Several years ago the FCC, at the urging of the ARRL (American Radio Relay League) instituted the Official Observer program. These licensed hams having at least an Advanced Class license go through training in the FCC rules and regulations as well as other legal training are certified by the FCC and the ARRL. We have no enforcement powers only "observation powers." But our word is given the same weight as an "FCC agent" when it comes to notifications of violations or court witnesses. Check out the ARRL web page http://www.arrl.org and search for "Official Observer"

here's a few.

http://www.arrl.org/news/stories/1999/04/08/3/
http://www.arrl.org/FandES/field/org/oo.html
http://www.arrl.org/news/stories/2001/03/28/1/

Even better, go to the FCC web site at http://www.fcc.gov and do your search. Maybe you'll learn something.

>
>Way too many flaws in this..to begin with, you can be lying through your
>wazoo of what FREQUENCY the tapes were made on..the feds have to catch
>you themselves.

Nope, wrong again. Check out the web pages at the ARRL and FCC. Yes I can be "lying through my teeth" but why risk it. It's called purgery, fraud, manufacturing evidence and a dozen or so other terms that carry unpleasant consequences. Besides it would cause me to lose my license, fines, jail time and civil lawsuits. Hams who volunteer for these positions generally have a bit more integrity than you give me credit. Once they've been

through the training they are trusted a bit more than the average person.

>Even if the feds receive complaints from the ARRL, which may or may not
>trigger an investigation based on 2 main critierias..safety and number
>of complaints, no way will they be made to appear in a court room
>without at least several months gone by and several attempts at contact
>by the feds which go ignored.

The ARRL and FCC are very closely coordinated in this effort and only the most flagrant and repetitive violators are pursued. I send out 5 or 10 notices of possible violations each month to hams. If you'd like to see one send me your snail mail address in personal mail and I'll send you a blank one. Most notices that I send are due to improper identification (not at least every 10 minutes). There are other criteria such as signal quality, language, out-of-band, etc. Yes it does take time for the FCC to actually act, if they do at all. Another thing, we're not "all bad." Part of our duty is to notify hams that are showing good operating practices as well. I send out 20 or 30 of those a month. Yes all of this is at my own expense, I'm a volunteer so I don't get paid. The ARRL provides all of the paper and I provide the postage to send it out.

>> We turned over information to about 35 people since December and there

Nope, there are costs. The court isn't just going to hand over information to you for "free" and unless the case has run its course you won't get anything without the court's permission.

>Let me get this straight...
>the FCC is already prosecuting 2002 complaints from the ARRL in circuit
>court in Texas? Go on, now.
>
>
>>Kevin, WB5RUE<<

You got it. Most are from violations last year and for violations going back years but yes they are in process for some this year as well. The OOs gather information, the ARRL gets into the act, more information is gathered. It is forwarded to the FCC, more information may be gathered and whammo the guy gets a Notice of Apparent Violation (NAV) and it's on to the judge from there. If the guy doesn't respond within the allotted time the FCC's charges stand and the fines are levied. If there is a dispute it goes to court. Few go to court because the evidence is overwhelming. We had one a few years ago with video tapes of the guy and audio recordings of the guy interfering with a net on a repeater. This guy had a VERY distinctive voice so it was quite obvious that it was him. That, along with the video, and the guy still denied it! It went to court and cost him thousands of dollars and his license. Like I said, we don't have any enforcement powers and are not allowed to directly contact the person under investigation. All we do is gather evidence in the forms of audio tapes, transmitter characteristics, video tapes (from a distance) as well as a few other things but we can't contact the individual. This is for our own safety and for the integrity of the case. If the guy doesn't know he's being watched he's more likely to make more "evidence" for us to gather.

try, twist.<<

Thanky, Franky.

>Trying that 'truth by repitition' thing again I see. <<

No matter how many times the truth is repeated, you are always there to
take issue with it, like a puppet on a string. At least you admitted it
this time.

>I admitted nothing, because there is nothing to admit.<<

Sure you did. I told you that you lose all sense when dealing with
me..here it is again, verbatim, spelling error intact:

>"Trying that 'truth by repitition' thing again I see."<<

That was an implication by you that repeating the truth doesn't work
when it has served me quite nicely and got me invited to many, many cb
happenings from members of this group.
See Franky, you can't even remember what you said these days.

Merely presenting a balanced and sensible opposite view, free of the BS
you try to ply serves nicely.

>Oh that's right, I forgot that 'truth' is your opinion, not reality. So
who am I this week, twist? Leland Scott? Aaron Voobner? Dwight Stewart?
Glenn Sparks? ....oh hell, I can never remember all of the names you
claimed me to be. Maybe someday I'll make a list and use it for my sig
-- hehehehe!!! <<

Doesn't matter to anyone except you and for some reason that upsets you.
Talk about accusations, you called me a hammie, said I had the same IP
addy as a hammie in WV who regularly slaps you around. You even called
me by his callsign, right after I made fun of your lack of sponsors when
you tried to become a moderator and dictate your own rec.radio.cb ng. No
one, not one person answered your pleas and begs for members. But what I
find amusing, is that what you describe as a "keyclown", made a passing
mention of another rec.radio.cb group, and now has over a hundred
members...self-explanatory..Sparky = failure, again!

>It hasn't worked in the past, so I don't understand why you are trying it again.<<

The only thing that hasn't worked in the past is
your efforts at playing Baretta of rec.radio.cb. If you want info on me, simply ask..if I feel it worthy of a response, I will gladly give you an answer with a big 'ol southern grin.

>Ok. What's your real name and address? You can email it to me if you don't want it posted on the newsgroup. <<

Email me with your phone number and I'll call you at my expense and give you the information once I am convinced it is the evil, diabolical Frankenvoob I am indeed cornfusing over ma bell's network.

>On the contrary, the very first post of this thread consititutes a violation of federal law, or can't you comprehend section 2.815?<<

Of course, but you changed the topic and jumped in first chance you had when I asked that lying Muenzler to back his claims. Even you knew they were BS which is why you rushed in where angels fear to tread. Do Muenzler a favor and email him privately, Spark, at least teach him a thing or two about how the system works.

>I have no beef with Muenzler.<<

Of course not, he offers up false and disinformation..in other words, he puts forth bullshit, much like yourself.

> He doesn't brag about beating his dogs, stealing real-estate, shooting college kids or freebanding.<<

Yea, you're right, only you have shown a demonstrated fondness for such topics.

> He has also demonstrated the ability to reason.<<

Only from you could we expect "reason" and "lies" to be casually interchanged.

Moving on...
The definition of "comprehension" alone eludes you. Quite a difference between "comprehend" and "disregard."

>I agree. Some people can't "comprehend" the possibility that some people are open and honest about their identity.<<

And this has what to do with cb? How many handles on the cb do you consider an open and honest presentation of one's identity? Once again, the creedence you lend a cber's identity is second only to Muenzler's claims of busting 27 cb/hammie radio outlaws.....THIS YEAR ALONE! Entertaining and astounding how you correlate cb handles with subversive acts of choreographed criminality and subterfuge.

>In case you didn't notice, my first response in this thread was regarding your misrepresentation that I am Voobner, not Muenzler's

unsubstantiated claims,<<

Then there is no reason for a preponderance of
armchair lawyering from you on his behalf, unless, of course, you have
grown fond of him after his failed attempts at grace.

> nor your unsubstantiated refutation of the same. <<

You have yet to make the world aware why what I think has such profound
effects upon your dimmed psyche.

>Instead they make arbitrary name associations with total "disregard"
of any evidence to the contrary.<<

Hey, when you're right you;'re right, and there is some truth to what
you say, but it wasn't what was being presented. Your posts are like cow
pies, all over the place.
Presenting it in a context offering a differing view than what you hold
is a sure way to lend even more credibility to what you set forth. Your
assuming concept of a legality not being "comprehended"

>What?!?!?!? The only thing I said was that you are an idiot for jumping
on the Voobner = Sparky bandwagon! <<

No, Franky, retrace your steps and you too, may find your lost lunch
box.

>What does being open and honest about one's identity have to do with
"legality not being 'comprehended'"?<<

I'll type slower if you read slower.

  is another of
your many errs, in and of itself, as certain aspects of it are
selectively "disregarded",

>Do you mean "disregarded" like you taking my words out-of-context?<<

What difference does it make what I mean? Don't worry so much about my
ramblings and go back to cutting out your paper dolls.

> Hell, that wasn't just out-of-context, it wasn't even -close- to
anything I said.<<

Just because your failures touch upon all aspects of your sad and lonely
life doesn't mean it isn't comprehensible to those who are not used to
repeated failure.

  having nothing to do with arbitrary names on cb, which in essence,
are nothing but handles, therefore, anonymous.

>Handles are not necessarily anonymous.<<

See, you did comprehend what I said, you were just failing for the
moment. Handles on cb are anonymous. Taking issue with it doesn't change
things, Franky, my boy.

> Everyone that knows my handle also knows my name. <<

This much is true..I christened thee "mud" long ago and everyone agrees.

>That's not anonymous. Your argument is lame. <<

No. My point is sound and true, and that simply is, cb is anonymous.
Your attempt at turning anything you can into an "argument" is lame.

I know it pains you, but Muenzler needs more than you can offer him,
Frank.

>Muenzler needs nothing from me.<<

You obviously felt he needed something based on your intercession and
warm fuzzy directed toward him.

> You, otoh, could learn some things from -him- about integrity. Matter
of fact, you could even learn the same lessons from Randy -- he may be
an ass (and I'm sure he thinks the same of me), but at least he has
enough integrity to put his name to his words. And that's a mighty high
step above your interpretation of "absolute responsibility".<<

I love it! My interpretations dictating your behavior...God, I love
usenet!

yeah ... it's 10 hours of work by 8 hours off time (sleep, shower and shave) than back to 10 hours work,. Keep that cycle up till you get 70 hours worked in 8 days than sit where you are at for a day or two (hopefully near your home but probably not) than go back out to driving. Most companies now say every 14 days out on the road "earns" 2 days at home. The trucks are small the beds are HARD (steel plate under a matress) the showers at the truck stop are filthy, and you smell of deisel for days just to earn a paycheck to support the family. Not to mention the stress ... you only drive a little to the office and get road rage think of the rage after 10 hours driving (espically in newyork/chicago/atlanta/LA/ ect.). If your lucky you might catch the wife at home when you call and can hear her voice for 5 min.

Sounds great so far but here are some things to improve (learned from ham and the army....)
1. place 102" of bare copper wire out running just 4" below the grass in the dirt with a ground rod at the ends in a radial pattern attached to the pipe (think arms reaching out for a better ground from the pipe and the rods are deep at the ends to improve the signal...)
2. place the bottom of the pipe in gravel so it can drain (also put a ground rod deeper in here for lightning to run off thru)
3 place water softner salt under all wires and pipes (increase the grounding effect)

have fun.... (I am finishing the same for my tower now ...)

Scottie, why Is it the keyclowns like to accuse people who have nothing to
do with the matter at hand. JJ is not VHF Radio Buff. Yet you and your bunch
of hypocrites openly accuse any one you don't agree with of being something
or someone they are not. Before you make a fool of your self look at his Ip
and header info then look at vhf radiobuffs. Then next time you won't look
as big a jackass.10-4 Good Buddy?

>For clarity here are my exact words:
"I'd love to but I'm a bit busy putting the financial hurt on those in my area, so far 27 this year. Some of them are (were) hams. It's much easier than you think. I'm sure that if the FCC was standing in front of your house you wouldn't be so "brave" as to make freebanding claims. Yeah! You're a man! But you'd surly be crying if you were standing in court. I see it happen all of the time. Guys make big claims of how big their amp is until the FCC marshal is holding it in his arms. Then the guy is crying like a baby. I'm sure you'd be no different."
"Twistedhed" <twistedhed@webtv.net> wrote in message news:3462-3D11F31D-190@storefull-2314.public.lawson.webtv.net...
From: wb5rue@yahoo.com (Kevin Muenzler, WB5RUE)

>I think twisty is twisting my words. I don't believe I ever said successfully prosecuted I said "busts." If I did then it was misleading and unintentional. <<

I thought this was a lark, BUT since you are now putting it forward as truth, you did indeed say BUSTS, but you also said they were getting hit in the wallet (fines) which would lead to the question of WHO was imposing these fines. If there is no prosecutorial involved, there would be no fines.

>I don't think I said "busted" anywhere in that post. I never took personal credit for making any arrests. Nowhere did I say fines either. I could file suit against you for whatever reason I can think of, "you're ugly and your Mamma dresses you funny" is a good enough reason. Not that it would go anywhere, this state has laws against frivolous lawsuits so it would cost me more than it would you, but you would have to hire an attorney to answer the suit or charges.<<

Not so. Here's some free legal advice that lawyers do not want you to know. Show up at court, ask the court's disposition in the matter, especially if you filed to have the suit/charges dismissed. The court will tell you where they stand. If you don't agree, tell the court you need to retain counsel, THEN you get a lawyer, not before. It can save thousands.

>That's exactly how any criminal/civil charge works.<<

Separate courts, having nothing to do with each other.

> Every one of these clowns had to hire a lawyer to defend him in court. That's where the "financial hurt" begins. Even if the guys don't hire attorneys there are court costs. <<

Only if a ruling is against the defendant.

>All I can say that MANY (sadly) were hams. <<
Why is that ALL you can say? Why can't you elaborate, after all you mentioned 27 pops resulting in fines, did you not?

>I said nothing about fines. Again you are twisting my words and putting new ones in there. I can't elaborate because YES it is against the law for me to give any information about the trial/pending trial until it is finished. Remember, these are FEDERAL cases. <<

Ok, so these are now federal cases. As long as you understand that your mentioning of civil court has no place, now.

>It's amazing what happens to some people when they get their Extra Class license. It's like they get stupid or something. They think that the FCC isn't going to mess with them because they have "topped out" in their license. It's a BIG eye opener for them! There are almost as many Extra Class hams busted as the rest combined! SAD! It was me and 14 other FCC Official Observers who work the San Antonio/South Texas area.<<

Oh, man. This gets better by the day. You sure you don't want to reword that last sentence, 'cause I can say for absolute certainty that as of right now there are only 54 active "field agents" in the country, and you are claiming 14 of them in Texas? And that YOU worked with them to bust hammies/cbers? Don't think so.
But wait a second, you didn;t say "field agents',
you claimed they were "Official FCC observers".....who coined that term, and what exactly is it?

>Did I say "field agents?" Nope, no need to reword that last statement. Several years ago the FCC, at the urging of the ARRL (American Radio Relay League) instituted the Official Observer program. <<<

Yes, they did, NOT the FCC.

>These licensed hams having at least an Advanced Class license go through training in the FCC rules and regulations as well as other legal training are certified by the FCC and the ARRL. We have no enforcement powers only "observation powers." But our word is given the same weight as an "FCC agent" when it comes to notifications of violations or court witnesses. <<

Not even close.

>Check out the ARRL web page <<

No thank you.

>http://www.arrl.org and search for "Official Observer"
here's a few.
http://www.arrl.org/news/stories/1999/04/08/3/
http://www.arrl.org/FandES/field/org/oo.html
http://www.arrl.org/news/stories/2001/03/28/1/

Even better, go to the FCC web site at http://www.fcc.gov and do your search. Maybe you'll learn something. <<

Like your tall tales of Texas tyrants?

> Once we track the person down using direction finding equipment, using Audio recording and such we turn all of the information over to the ARRL who turns if over the FCC.<<

Way too many flaws in this..to begin with, you can be lying through your wazoo of what FREQUENCY the tapes were made on..the feds have to catch you themselves.

>Nope, wrong again. Check out the web pages at the ARRL and FCC. Yes I can be "lying through my teeth" <<

Of course you can, which makes me correct in the above statement, not wrong.

>but why risk it.<<

Dunno why all those hammies geting popped
are always risking their license doing malicious jamming of repeaters or of anter hammies station or even worse, business....and you're biggest cry about cbers are amps and freebanding.

> It's called purgery, fraud, manufacturing evidence and a dozen or so other terms that carry unpleasant consequences. <<

Damn sure don't deter jhammies though, eh?

>Besides it would cause me to lose my license, fines, jail time and civil lawsuits. Hams who volunteer for these positions generally have a bit more integrity than you give me credit. <<

You sell yourself short. I gave you the benefit of the doubt until you got a bit carried away.

>Once they've been through the training they are trusted a bit more than the average person.<<

That you even put forth this belief speaks for itself.
Even if the feds receive complaints from the ARRL, which may or may not trigger an investigation based on 2 main critierias..safety and number of complaints, no way will they be made to appear in a court room without at least several months gone by and several attempts at contact by the feds which go ignored.

>The ARRL and FCC are very closely coordinated in this effort<<

More happy horsepucky.
The FCC simply tolerates the noise made by hammies such as yourself concerning your willingness to play space cop. They have not endorsed such an effort.

> and only the most flagrant and repetitive violators are pursued. I send out 5 or 10 notices of possible violations each month to hams. If you'd like to see one send me your snail mail address in personal mail and I'll send you a blank one.<<

Post it here as I am sure many would like to see your introductory letter of warning concerning radio behavior you attempt to police.

> Most notices that I send are due to improper identification (not at least every 10 minutes). <<

You have GOT to be kidding.

>There are other criteria such as signal quality, language, out-of-band, etc. Yes it does take time for the FCC to actually act, if they do at all. Another thing, we're not "all bad." Part of our duty is to notify hams that are showing good operating practices as well. I send out 20 or 30 of those a month. Yes all of this is at my own expense, I'm a volunteer so I don't get paid.<<

I personally take issue with the "duty" aspect. As you profess, you are a volunteer, indicating you have a choice. Equating "duty" with the status of volunteer radio cop merely lends an artificial face to what actually is taking place. I do comprehend certain type people need powertrips and that the word of choice and preference (duty) for justifying such bizarre behavior certainly camoflauges with efficiency the sadness and desperation of those that identify with such.

>The ARRL provides all of the paper and I provide the postage to send it out.
We turned over information to about 35 people since December and there are 27 that I know of that are either on their way to court,<<

Keep digging.

>Whatever. Keep reading.
in court or have been through court. Yes, it's very expensive for them even if the are found "not guilty." <<

How so? Not guilty verdicts usually enable one to seek compensation for everything they were put through.

>No I'm not going to give you names, that's illegal. <<

No, it's not at all illegal to give their names, but seeing how you already claimed they were busted and fined, that in and of itself can possibly lead to legal trouble if you name names if what you claim never actually took place. In lieu of that, I can see why you would be reluctant to say anymore.

>In FEDERAL court it is illegal to divulge ANY information about defendants or court proceedings without the express permission of the court. <<

Not so. It's called the freedom o information act and the feds are not absolved, unless a gag order was issued.

> I'm not about to go through the procedure to get that express permission to satisfy your curiosity.
But if you want to spend the money you can look them up yourself. Most are being prosecuted at the Fifth Circuit in San Antonio or Dallas.<<

It can be done for free.

>Nope, there are costs. <<

This point I will not argue. Go on paying.

>The court isn't just going to hand over information to you for "free" and unless the case has run its course you won't get anything without the court's permission. <<

See above.

Let me get this straight...
the FCC is already prosecuting 2002 complaints from the ARRL in circuit court in Texas? Go on, now.

>Kevin, WB5RUE
You got it. Most are from violations last year and for violations going back years but yes they are in process for some this year as well. The OOs gather information, the ARRL gets into the act, more information is gathered. It is forwarded to the FCC, more information may be gathered and whammo the guy gets a Notice of Apparent Violation (NAV) and it's on to the judge from there. If the guy doesn't respond within the allotted time the FCC's charges stand and the fines are levied. If there is a dispute it goes to court. Few go to court because the evidence is overwhelming. We had one a few years ago with video tapes of the guy and audio recordings of the guy interfering with a net on a repeater. This guy had a VERY distinctive voice so it was quite obvious that it was him. That, along with the video, and the guy still denied it! It went to court and cost him thousands of dollars and his license. Like I said, we don't have any enforcement powers and are not allowed to directly contact the person under investigation. All we do is gather evidence in the forms of audio tapes, transmitter characteristics, video tapes (from a distance) as well as a few other things but we can't contact the individual. This is for our own safety and for the integrity of the case. If the guy doesn't know he's being watched he's more likely to make more "evidence" for us to gather.
Kevin, WB5RUE
wb5rue@arrl.net<<

Hehehehe! We will all rest easier knowing you guys are on "duty." With your federal-aided training and super-sleuthing techniques, coupled with Sparky's self-proclaimed "Twisty-Buster", each of you asking for my real addy is a confession of failure concerning your stated objectives.

Florida Man convicted of deliberate interference, unlicensed operation

From ARRL Headquarters
Newington CT June 20, 2002
To all radio amateurs

A Florida Citizens Band enthusiast accused of jamming Amateur Radio operations and transmitting without a license was convicted in federal court June 19 on eight misdemeanor counts. Willam Flippo of Jupiter was found guilty of four counts of operating without a license and four counts of deliberate and malicious interference. Federal District Court Judge Daniel T.K. Hurley noted that, while the charges were misdemeanors, it was important that the amateur airwaves be free of interference in the event of an emergency. He ordered that Flippo remain in custody and undergo a psychiatric evaluation prior to sentencing.

The prosecutor in the case, Neil Karabdil, credited members of the Amateur Radio community with bringing Flippo to justice. The list included ARRL 1999 ARRL International Humanitarian Award winner Ed Petzolt, K1LNC, who helped the FCC gather evidence in the case; Bert Morschi, AG4BV; Palm Beach County Emergency Coordinator Dave Messinger, N4QPM; and Chuck Mulligan, N4SDW.

''This is a very good day for Amateur Radio, and a very good day for justice,'' Petzolt said following the trial. ''Let the word go out that we will not tolerate this sort of thing on our frequencies, and you will be caught.'' Petzolt cited local amateurs and the efforts of the FCC, including Special Counsel for Enforcement Riley Hollingsworth ''and everyone else who kept the faith,'' for helping to bring the case to a successful conclusion.

''Never give up and never surrender,'' Petzolt advised those facing similar malicious interference situations. ''If you do, they win.''

According to Petzolt, who testified in the trial, Flippo primarily had targeted the Jupiter Tequesta Repeater Group for jamming and regularly interfered with amateur operations, especially on 10 and 2 meters, over an approximately three-year period. Following up on the amateurs' complaints, personnel from the FCC's Tampa District Office visited the Jupiter area at least twice in 1999 and reported tracking the offending signals to Flippo's residence.

Federal authorities arrested Flippo in July 2000. The criminal charges of which he now stands convicted covered violations

allegedly committed between June 1999 and April of 2000. The defendant already faces a $20,000 fine levied in 1999 for unlicensed operation, willful and malicious interference to Amateur Radio communications, and failure to let the FCC inspect his radio equipment.

Hurley said he was worried that Flippo might not return to court for his sentencing hearing and ordered him returned to jail. Flippo reportedly hung his head after the jury returned a guilty verdict on the second count. He had no comment for a reporter as he was led back to jail.

Sentencing could take place in about a month. According to the FCC, Flippo faces a maximum penalty of eight years in prison--one year on each count. He also faces up to $80,000 in fines.

The guy was an idiot and deserved what he got. No one is taking issue with this enforcement. In fact, most of us probably support it, despite your attempts and innuendo at suggesting otherwise.
This bust was a good thing, as are most of the FCC busts....they are usually hammies with no respect for the law. It is good that we do not tolerate such behavior such as jamming repeaters. Others are more concerned with not IDing ever few minutes. Yet others (like the FCC) are concerned with non-trivial persuits.

If you are powering it from a car, leave the antenna on the car; the antenna requires a counterpoise.

If you are powering it from some other source, there are any number of good temporary antennas. The easiest is 18ft of small wire soldered to a coax fitting (one to center, one to shell) and enough fishing line to tie it to some sort of support. Fishing lead is pretty good for getting the support line into a tree. Run some rope along to support it, coax is heavy.

Harder to mount is a 20-25 foot piece of small coax with the braid removed and folded back along the rest of the coax for 9 feet and secured with tape. This is surgery to build but works. Again the fishing line into the tree to hoist the stripped piece up is an instant vertical and takes only one support.

If you must use the steel thingee, get a cheap mount and run the coax to it and four 9 ft pieces of wire to the mount to make a ground plane and hoist it into a tree with fishing line. You can adjust VSWR by varying the angle of the ground plane. In the alternative, just hang one piece of 9 ft onto the mount and let it dangle in the breeze; probably have a 1.5 SWR or so but not of the kind that damages transmitters.

Use some ingenuity, you will need it. Particularly when you ignore her to work DX or face the committee of fellow campers carrying a noose.

Reminds me of the guy that said he kept a bucket of salt in his trunk. He said
it provides a better ground for his mobile. I'm not one to argue with a bonehead...

However pouring some salt around the area of the ground rod has got to
help some with decreasing the resistance of ground. Water will greatly help.

Moparholic,
If you're going to use 'hot switching' of the relay
it can be set up for almost any amount of RF. The 4 watt
output of a stock radio would/should work fine. If you
hard-wire the relay, it doesn't require RF at all. It
seems to me that this 50 watt thing is just some arbitrary
number that someone pulled out of the air. Depending on
how you design a swamping network on the input of an amplifier,
it can be made to be driven by any input level from miliwatts
to kilowatts.

Radio Shack whip is good... but the ball mount is really bad that they offer to work with it. However, the ball mount from Antenna Specialists is very good...

Ok, the girlfriend is draggin' me camping for 4 days (Bon Echo Provincial Park, Ontario Canada) and I'm bringing along my radio. Cobra 29 LTD classic, 64" steel coil whip antenna, SWR/Watts meter, etc.

Any ideas on what to do (with my radio) for those days? How to mount the antenna? Anything?

Keep the antenna mounted on the car.

2117. Re: Sweep tubes to ceramic

Newsgroup: rec.radio.cb
Date: 2002-06-22 02:30:29 UTC
From: Uncle Peter <radioconnectionNO@cox.netSPAM>
Message-ID: <9jRQ8.74723$Hn4.2644092@news1.east.cox.net>
Source record: 128023
Cross-posted to: rec.radio.cb,rec.radio.amateur.homebrew,rec.radio.swap

Skip!

Where did I say TETRODE??? I said there are better CERAMIC tubes.
A specific example would be a 3CX800 or 3CX1500, either will
beat the 4XC250 3rd order IMD specs by several dB. (-36 and -38 dB
respectively.)

Where did I say the 4CX250 didn't meet FCC specs for IMD?
I'd be interested in a reference to the FCC regulations specifing
transmitter IMD perfermence requirements that you referenced. If they
exist, then there are a lot of vintage sweep tube amps
still in use that are far worse than the 4CX250 in terms of poor IMD
performance.

Sure, 4CX250s may be cheap, but the problems and added costs involved
with the bias supplies, screen-regulation and protection circuits, and
even
finding good quality shielded-screen bypass sockets, sure make a good
case for using more modern components. My choice would be a 4CX350--if
I was constrained to whatever ceramic tetrode was most handy and in
quantity in my tube bins.

For reference:

http://www.svetlana.com/docs/TechBulletins/technoteNo42.html

sorry about that, I didn't mean to leave out information. I didn't find the charred resistor until ~after~ I posted to the NG about the linear problem, the unit will produce around 65-70 watts at 4 watts modulation out my radio...it just sounds horrible...which is useless to me. and since the linear was "given" to me, whether it works again or not, I haven't lost any sleep or worries over it.

Never try to impart wisdom on the humble.

Most likely, the person is stubborn and wants to stay in their lowly state.
-If you fail in imparting wisdom, the person will bring you down to the person's level and you will expend so much wasted effort, which could have been much better spent elsewhere.
-If you succeed, the person will decide the person is suddenly better than you and that you are no longer needed and will abandon you.

The third (and desired) possibility, that the person will gain wisdom and appreciate it, is also the least likely outcome and is so unlikely as to be not worth pursuing.

And mount the girlfriend any way you like... ;)
Seriously... You're going to be camping for 4 days and you're worried about the radio? Heheh... I think we're all too much slaves to technology... :)
My wife would probably kill me if I tried to take my Radio along with us anywhere... I think that's one of the main reasons she likes to get away.

Well, I don't think it matters too much... The fiberglass one may have some
better corrosion resistance than the steel one, but if it's a stainless whip
then that shouldn't be a problem.
I got a couple of fiberglass Archer 102" whips at Radio Shack on clearance
for $4.99, so if you can hook up with one of those, you might want to try it
out.

You can end up with corrosion of your ground rod that increases the
resistance.

If you are in a cold climate then go steel. Fiberglass can split and shatter in cold weather. Also if you have to go into restricted height spaces like underground parking at the mall then steel will give you the flex you need.

1. If you are dead set on a steel post, use a larger diamater than 1 inch. It's going to move around alot, and guying it isn't a permanent solution to that.

2. If you use pipe, attach a nipple and coupling to go into the concrete at the base. Attach one length of pipe to it so you can square it when pouring cement. This will permit you to take the whole thing down should you feel the need without cutting it off with a saw at the ground.

3. For this project you will probably need more than a 1 foot square of concrete to keep it upright. If you are pouring it into solid rock, then that's another matter, but soil will let it bend over with the first good wind.

4. If you have a ground rod at the base, make sure it is set outside the concrete base. If the pole is hit, the rod (set in the concrete) would explode the concrete like a bomb and the whole thing would come down.

The 50 watt input question is only one factor. The other issue involves the legality of manufacturing and selling an amp that works on 10-12 meters out of the box. Your amp would have to operate no higher than 15 meters and then have more jumpers. The Kenwoods, Icoms, Yaesus mentioned do not have jumpers. To make alterations it is necessary to weild a soldering iron. (If the 60 meter proposal goes through, there are going to be a lot of radios modified that aren't already.) The fact that you are including jumpers to affectively change the usage and purpose of the device could be looked at by the court system in an unfavorable light.

As rigs become more software dependent the wire clip caper will die a deserved death. You do not hear Ten-Tec gear on 11 meters but the new 60 meter band can be added with a phone call and 30 seconds to later models. And in fact most Amateur gear is capable of rule-breaking right out of the box. The issue here is that part of my license is an Operator permit where CB runs on a grant of limited authority. Not a big deal in practice but a major change of legalities.

What I do not really grasp about all this is why anyone cares what the legalities are and why the great search for loopholes. Unless, of course, one wishes to deal with reputable manufacturers and not some back-alley hacker. There is something comforting I guess about the ARRL labs pronouncing upon some wondrous piece of gear before you pop for it.

There also seems to be an ongoing search for the cheap-and-dirty way to get power on CB without doing it right. An AM linear is by its nature damned inefficient and must be run low on its output to accommodate the 4 times relationship of peak to carrier power to keep the distortion below a gentle ladylike belch. But we do not seem to want to do this in a 'balls to the wall' environment. And then we resurrect 'swing' out of the 40s

with a theory of AM that goes back into the 20s and produce a battalion of Frankensteins. Most Amateur amps will not take AM for any great length of time at anywhere near rated power. Check the ratings for a continuous mode like RTTY or any other digital mode and cut it in half for Ancient Modulation.
For the life of me I find it hard to believe that AM still exists in a fixed station environment. If we can ignore power and freq limits why stay channelized? Seems kind of dumb to be using 2.5 kHz SSB in 10 kHz channels when you can run all day on the fives, eights, and ones so long as some LSB/USB convention is observed. Honor among thieves??

And if one is going to buy a ham rig and put it on 11, my only real question is if you are ready for a real radio why are you not ready for real radio? The exams are not that difficult, gang. Granted, code tests are not a hell of a lot of fun but neither are they all that demanding of much besides time and determination and at 5wpm not a lot of that. I sure don't need the answer but someone going to a lot of expense to be a pseudo-ham really should know his answer to just why in hell he is doing it. I am sure as hell no expert but it would seem that anonymity and male potency rituals seem to play a part in it. At least this explains the vast effort and expense toward what is really a half-vast radio experience. It is more understandable where maintaining a license costs real money.

Get ye buns to Field Day this weekend and hear a real HF pile-up in action and participate at the GOTA station. You might have to do some research for the local clubs via http://www.arrl.org and local club websites to find the locations but it will be an eye-opener.

I don't really care what you do so long as you stay off my real estate but just do it and quit playing Seabag Lawyer; we have enough Lifer Techs to fill that role forever.

Soundly seconded!

>Granted, code tests
>are not a hell of a lot of fun but neither are they all that demanding of
>much besides time and determination and at 5wpm not a lot of that.

Just to share my experience with the group, if you wait until you "feel" ready...you'll never go. Both Dick and Ed (Hare) encouraged me to "give it a whirl," even though I felt that I needed more practice. The result was a $shit-eating grin, the size of Ohio, once the test began. I promise you that if you've put in about half an hour per day for two weeks or so, you'll laugh when the characters start "floating" in on the actual test.

BTW, the paragraph above contains approx. 250 characters, more than twice the amount they'll send...and you only have to bag 25 of those in a row. Punctuations an prosigns count as 2! Good luck! :-)

Oh, the written tests? An afternoon with a study guide. (Which are the actual Q & A's.

4watts dead key is WAY too much drive for that single transisitor amp. a half a watt to 1 watt would be better. if your radio has a super mod/npc mod that mnakes it dead key really low and swing really high then it wont work well at all with that amp.

hi dick, this is a very good question thats asked alot but you answered it above in your own post. let me quote your text that makes a perfect response for your question

>The issue here is that part of my license is an Operator permit
>where CB runs on a grant of limited authority. Not a big deal in practice
>but a major change of legalities.

thats the whole thing dick. theres not a big difference in whart we do and what you do. we all talk and have fun on the airwaves. the only thing that would make what you do "real radio" are those legalities and nothing else. we're all hobbyist trying to have fun. i could care less about passing a test of having a license. its simply not needed for me to have fun with my equipment.

Sure there is Tim, what you do is Illegal and against law, you consider breaking Federal Law a hobby? If not stay on the regular 40 and use type accepted CB radios, why is that a problem your still using your radio right. Thats where the difference lies Tim. Hams are responsible for there actions, unlike Freeloaders who thumb there nose at the Law. So please don't try to compare Illegal Cbing to amatuer radio. Tim, do you have a drivers license? Why do you have one you? certainly you can drive and have fun like those licensed drivers. In your own words what we do (illlegal drivers) there is not a big difference compared to a licensed driver.

Do my comments about chicken band and children's band apply to YOU? From your actions and words they certainly do. But I know a large number of CBers that they don't. Maybe you don't know any and that's your problem. Do you and all your "friends" fit right into the chicken band and children's band category? By my experiences, those hams and CBers I know, the ham radio community certainly lives and acts with much more integrity than the CB community. Yes there are bad apples in both bunches, I never said that there aren't. You and twisty read too much into what I say. Yes I do occasionally post to the ham groups.

>interstate when exceeding the speed limit. Philosophy this ain't.

I don't at all, highway patrolmen or not. That's what it means to live with integrity, you obey the laws whether someone is looking or not. You are right, "philosophy this ain't" but it does show a general lack of integrity and character if you violate laws/rules when someone isn't looking and follow them only if there is a reasonable chance of getting caught.

>and ther businesses as well. Yes, hammie radio is plagued with this.

Yes there are bad apples in both communities but in general ham radio operators operate by the rules when someone is looking and when no one is looking. It's called integrity. I wouldn't say that ham radio is plagued with problems but they do exist. There are four "CB shops," not counting the truck stops, in the San Antonio, TX area. I can go into any of these and buy illegal equipment. There are two ham radio shops in San Antonio, neither of which sell illegal equipment.

>>It's why 11-meters has been given the two names "Children's band" and
>>"Chicken band."

>Only by ignoramuses, intentional or not.

"Ignoramus" means someone who acts out of ignorance. Those who call CB chicken band and children's band are not speaking out of ignorance.

Yes I know that they are seperate, that's why I put the "/" between them.
You sure are digging to find something wrong with what I say. I mentioned
civil as an example of a type of court case. I never said that these were
civil cases.

> > Every one of these clowns had to hire a lawyer to defend him in court.

> for clarifying what I was trying to do in the first place, Kev. You have
> demonstrated a pattern of habitual lying and it is readily clear you
> have not a clue when it comes to the court system.

These are FEDERAL, F-E-D-E-R-A-L as I have stated many times. I brought of
"civil" as an example of a type of court case. I never said that any of
these cases were heard in civil court. There may or may not be civil
proceedings as a result but the portion dealing with violations of FCC rules
is FEDERAL. In every case in which I have been involved I have been
instructed by the court not to discuss proceedings and/or evidence until the
proceedings are completed. You are quite welcome to make whatever inquiries
as you see fit. These cases are being held at the Fifth Circuit Court in
San Antonio, Houston and Dallas. Be prepared to shell out some bucks, they

aren't just going to give you the documentation.

Can you produce any evidence, let alone prove, that I am lying in what I said? No, you pick on simantics and twist what I have said to make it look like I am lying. This is why they call it CHILDREN'S BAND and maybe why you are called "twisted."

And so be it if that is what you want to do. All I meant by 'real radio'
is the freedom to wander all over the spectrum in response to season,
daylite, and sunspots (which are declining BTW) and not be channelized nor
have to listen to the inevitable idiots if you are not so inclined. Just
seems if it is a hobby, then do real hobby radio.

>be no fines.

Nope, not once did I use the word "busts" Go back and read it again. Maybe
you did. I suppose if you arrange the letters in such a way you can spell
"busts" somewhere in what I said. Yes they are being hit in their wallet.
Who do you think imposes fines? You SEEM to know so much about court
proceding and our judicial system. You can come up with the answer
yourself, maybe. Nowhere did I say that there was or wasn't any
"prosecutorial" involved. If they are found guilty they pay fines or appeal
(more money). If they are found not guilty they still pay court costs and
attorney's fees unless they found someone to do it pro-bono for them which
is not likely.

>
>>I don't think I said "busted" anywhere in that post. I never took

>need to retain counsel, THEN you get a lawyer, not before. It can save
>thousands.

Yep, may "save thousands" but when the case is not dismissed (rarely are
they) you will still need to hire an attorney and pay court costs. There is
no way to get through one of these without it costing thousands unless you
can get the case dismissed before it begins. This just doesn't happen.

>
> >That's exactly how any criminal/civil charge works.<<
>
>Separate courts, having nothing to do with each other.

Never said that they did, did I? What I meant is that the procedings are
similar in each. You are charged, you answer the charges, the case is
dismissed or goes foreward, the case is tried (differently in each court),
the case is resolved and you go on.

>
>> Every one of these clowns had to hire a lawyer to defend him in court.

>
>Ok, so these are now federal cases. As long as you understand that your
>mentioning of civil court has no place, now.

Civil was given as an example of a type of court. There are federal civil
cases but they are extremely rare. For instance if I want to sue the
government for libel or slander it is a FEDERAL civil case. But here's the
catch, the government has to give you permission to sue it.

>>It's amazing what happens to some people when they get their Extra

>the ARRL who turns if over the FCC.<<
>
>Way too many flaws in this..to begin with, you can be lying through your
>wazoo of what FREQUENCY the tapes were made on..the feds have to catch
>you themselves.

It's quite simple. Say you are the person causing interference. EVERY transmitter has a particular "key up" or "phase in" signature that can be recorded. With the advent of digital storage scopes (fancy oscilloscope) it is much easier. When you key your transmitter it isn't exacly on frequency instantly. There is a very small fraction of a second when it is "locking" onto the transmit frequency. That can be measured and displayed. If necessary that's how we can say that YOUR transmitter is causing the interference. Frequency is noted an logged and not "recored on tape." The audio is recorded on tape or digitally.

Nope, the "feds" don't have to catch you themselves. It is true that the final determination and arrest must be done by a federal marshall but he doesn't have to be the one to collect the evidence. Again, go to the FCC or ARRL web sites and read it yourself. Maybe you'll learn something.

>
>
>>Nope, wrong again. Check out the web pages at the ARRL and FCC. Yes I
>can be "lying through my teeth" <<
>
>
>Of course you can, which makes me correct in the above statement, not

You are arguing simantics again. Sure, I *CAN* be lying through my teeth but why risk a civil lawsuit and/or criminal charges of tampering with evidence, manufacturing evidence, purgury....etc. Why risk it?

>>but why risk it.<<
>
>Dunno why all those hammies geting popped
>are always risking their license doing malicious jamming of repeaters or
>of anter hammies station or even worse, business....and you're biggest
>cry about cbers are amps and freebanding.

It's because they are foolish and/or stupid enough to think that they won't get caught. Evidence produced in court is gone through with a very fine toothed comb, it MUST be constant and accurate or the case is jeopardized.

>
>> It's called purgery, fraud, manufacturing evidence and a dozen or so
>other terms that carry unpleasant consequences. <<
>
>
>Damn sure don't deter jhammies though, eh?

It's different. Those "jhammies" aren't being scrutinized in court.

>justifying such bizarre behavior certainly camoflauges with efficiency
>the sadness and desperation of those that identify with such.

Yeah, you "personally take issue." Just showing your thin skin. There are people who take issue with those who violate the rules too. You are showing a general lack of character and integrity by this paragraph. The FCC does not have the manpower to "police" the CB and HAM radio bands so it enlists volunteers to do some of the footwork. It's not a power trip or anything like that. There are hundreds of amateur radio official observers who take pride in their ham radio service and want to keep it clean. We are not bullies throwing our weight around. We are here to remind ham radio operators of the rules when they are violating them. Since I became an official observer for the ARRL and FCC I have sent out 860 "Official Observer Advisory Notices" and have received back 10 angry replies and 140 thank you notices. Most hams want to be notified when they are violating the rules and don't take it as a personal attack, like some people. What do I do when I get an angry reply? The same thing I do when I get a thank-you,I put it in the file with all the rest. I don't reply back, I just file it.

The FCC has basically thrown its hands up at the CB radio service and look what happened, chaos. With the help of official observers that will not happen in ham radio.

>

>everything they were put through.

What country do you live in? Not in the United States and certainly not in federal court. Unless it's a frivolous suit is the defendant going to receive any help or compensation when he's found not guilty. The defendant may file a lawsuit for damages but since this is "the government" making the charges....it ain't gonna happen. The Official Observers are specifically protected under the law from lawsuits by the defendant.

>
>>No I'm not going to give you names, that's illegal. <<

>absolved, unless a gag order was issued.

Maybe that's what you call a *request* by the court not to discuss the case outside of the courtroom, "gag order." Yes it's only a request because the judge knows that he won't have to make it an order. It's called integrity. Go look the word up in your dictionary, obviously you are completely unfamiliar with the meaning or concept.

Maybe this is your "experience". Since you are describing your "experience" I will describe mine. I held a Tech Class license 27 years ago. Most if not all Ham's were stuck up snobs who could bore me to tears with their rhetoric, radio knowledge and in general lack of a REAL LIFE! We now refer to them as HAMBO's or just Dweebs! I will concede that things have changed in the last 2 decades...but everything I see and hear confirms that it is pretty much same old same old (man).
On the other hand many CBers and Freebander's have much more to offer in the way of friendship (with no strings) and just plain old down home courtesy.... however don't mess with them or you're likely to get the reality check you deserve for trying. As for me....I like talking DX on 11 meters and have no plans to renew my Ham license....it would just be a waste!

Kevin, Welcome to rec.radio.cb another extension of actual cb radio, they will attempt to put words in your mouth, they will attempt to scrutinize your post looking for one word you left out, they accuse people of being others , LOL just like on the radio as a matter of crack, they will tell your an asshole for posting the rules, yet they will try and tell people about usenet rules when they are Federal Law Breakers and admittidly so. You need to take this attitude. "I learned both of these by twisty and it basically sums up his whole outlook. "just because you say it doesnt make it so" and the other is I think he got this one from watching the WWF, "It doesn't matter what you think". If you use these 2 key elements with what they say your experiance here will be much more fruitful.

Nope, not me. I've not been on a repeater in a couple months. That being said, Boy Comcast George, I do enjoy yanking your chain, and even when I don't invite you to spew drivel, you seem to love having me on your mind. What's with that? Do you also have some sort of unrequited love thing going for the rest of the group, or am I just the *lucky* one?

Thought you were going somewhere? Anyway, I am, so I'll be available to jerk your chain later. Reply to this, ad infinitum, should you so desire. I'm going to a BBQ with friends.

Later Putz!

Professor,
On some Ameritron amplifiers, clipping the
~correct~ green wire will enable operations on
10 meters. Not all Ameritron amplifiers have
this 'green' wire. You want to make sure you
have the right information (and all of it) before
you start clipping.
'Doc

I noticed you did'nt choose a Cobra 148 as a choice.
They make a great SSB rig and have a great platform for building on,
but stay away from the S/T (sound tracker) model.
I am partial to Ranger radios and currently use a Sommerkamp TS2000DX
Which is a slightly beefed-up 2950 old-style.
I don't have any experience with Galaxy's except they have all the bells and
whistles for the fiddlers and gadjet freaks.....

I also find it hard to believe there was a guy recently in our area who took the extra exam, failed by 1 so he took it again the same nite and failed by 2, so he decided to go the following month and takes it again with out studying, this nite he takes the test, misses it by 1, pays the $10 takes it again misses it by three, so he pays the $10 decides to take it one last time, he then misses it by 2. He has now spent $50 dollars and missed the test by the slimmest of margins now if they were giving licenses away don't you think this guy after $50 bux and enough fortitude to take the test 5x and miss it so close they would finally buckle and say lets give it to him. When this guy finally get it he can truely say he earned it.

Bill,
There were always a few who got licenses due more to sympathy than knowledge, even when the FCC gave the tests. I think that 90% figure is a quite a bit to high.
Also, having taken test both ways, (FCC and the VE system), the only differences were that the intimidation factor was lowered under the VE's, and you didn't have to sit in that dam 'government' green room with the school desks that were too small.
'Doc

Well,

Like Mr. Hollingsworth told me last year, "You can't regulate 'STUPID'"! He
asked for
what he got.

Kind of my feelings as well, Scott. May the two posters of Hammers and
Jammers find a very large tack and sit thereupon.

>When this guy finally get it he can truely say he earned it.

OTOH, he should have spent some time out of that month to study, or at the very least to learn from the mistakes he made on the first test. If he put half as much effort into studying for the first test as he did in taking the second, third, fourth, fifth and sixth tests, he wouldn't have had to take the second, third, fourth, fifth, and sixth tests.

And another point, if you think he should be granted a license just because he spent a lot of time and money on the tests, then how does it work for someone that doesn't study at all? In that case, how many times do you think a test should be given before they "buckle" and hand you a license? 20? 30? 50? That's just not the way it should be done.

No I don't think that at all Bill said people are paying for Ham licenses,
I figured if this guy spent $50 buxs using his theory they would have given
him the license.
told him if he is missing it by 1 without studying what does he think will
happen if he learned the material.

I think Riley admitted a while back that the recent stepped-up
enforcement has driven a lot of the bad hams off the airwaves and onto
the ham groups. You can certainly tell the difference on the air.
Those former "zoo" frequencies on 20 and 75 meters are pretty quiet
these days. Must be a real letdown for bootleggers like Tim Nebo who
felt right at home keying up on those freqs.

Well according to your government the use of tricked-out CB's is not
designated as CB. Funny channels are not designated as CB either.
Doesn't matter how long the phoney DX bootleggers have been on the
air, they're not CB'ers, they're pirates. How about alt.pirate.radio?
Or maybe alt.crime? Seems to fit.

No I prefer fish, but I find Florida Gulf Coast seafood lacking.
Whenever I am in the Tampa area, the locals complain endlessly about
the poor quality of the local seafood. The better restaurants import
it from Canada. Go figure.

It is not the VEs choice or at least it would take some collusion among all three to do it. Every paper from an exam goes back to the head shed and is subject to audit; where do you think Riley gets the material to do his thing now and again??

A lot of things in systems really depend on not giving total authority to one person. Not foolproof to be sure but you see this theory in business all the time: one person does the PO, one receives the stuff, one cuts a voucher, one writes a check. Add a path for a whistleblower (and there is indeed one in the VE caper) and the risk level rises rapidly.

On another group, I have argued for a time in grade for VEs more to protect them than stop fraud. With the exams getting easier to pass at least and very possibly the code thing going away, I can see some new Extras under tremendous pressure to pass their good buddies. Kind of like hours in the womens' dorms: the ladies did not like to see them done away with because it gave them a way to unload a toad.

I haven't done the VE thing in a while but it was pretty damned honest when I did it.

This company in AZ only export their products via CCI.

I'd very much like a copy, scanned will do.

Any of you tech's care to e-mail it over?

Appreciate any help.

Thanks

Well your right as long as they keep it off the airwaves. But there is a problem with that. The news groups are our front lines to recruiting new hams. So if you look at the trash on rec.radio.amatuer.misc it gives amateur radio a real big black eye. Then you compare it to the stuff in this news group and this news group wins hands down. Most hams think that CBers are low life's. Well I don't; just like everything else good and bad with every group. The thing is the bad on ham radio show up in the newsgroups and the good for CB radio show up in the news group. What does that do for amateur radio? So as long as they are off the air? I don't think that's good enough. I don't have a answer just a observation.
73 Oris
I am a firm believer in amateur radio's 100% annexation of the 11- meter band including operators! The use of handles as call signs on 11 meter new amateur radio band should be legal!

I agree Dick, If it wasn't honest they could have passed this guy after the first time or 2 he retook the test, hell he was already a general class. Now there are always those that will sell something for money but all in all it is pretty honest.

How do you feel this CB NG is good look at all the illegal activity that get talked about , Offers to sell illegal equipment, offers to perform illegal Mods. You don't find that on the Ham NG's just a bunch of guys who argue with each other over semantics etc. Like I said they do it there because they can't do it on the air.
If you think NG's are where we recruit people you are sadly mistaken. Go read any other NG they are all the same. Arguements, trolls, fiction. If you count on a NG for anything than entertainment you need to reevaluate things.

Source record: 128140

I personally don't think the galvanized water pipe is a good idea. If your dead set on using pipe designed for another application (read: not intended as an antenna mast) then consider using GRC or IRC. Both are rigid metallic conduit used in electrical work. I believe the IRC is the stronger of the three, thicker walls and holds up well to the environment. Rule of thumb we use when setting light poles is: If 15 feet is exposed than 5 foot is buried. Or 1/3 of above ground height is below ground. But this may not work in your application and there is a point at which this rule becomes pointless. Just buy a pipe cap to cover the top. Will thread right on. Also consider using something a little beefier than 1". Between 1.5" and 2" would provide plenty of strength. I would definitely run a ground wire. Just because the pipe is in the ground doesn't make it a good ground. I like to use 5/8 copper rod 10' long. Works well even in dry sandy soil. If the soil condition is bad consider some additives to improve conductance and watering it every once in a while, just don't make a big soft mud pit. I like #4AWG THHN (Copper of course) for ground wire. Unless your grounding a 2000A Switch Gear then you might want to bump it up to 3/0 and defiantly lay a uffer.

Just a few thoughts I had. feel free to educate me if you think I'm off some where. Never set an antenna mast my self and I'm trying to apply knowledge of another field to antenna masts so I'm sure there is something I don't know or haven't considered.

Dave

While I applaud the FCC for doing their duty. Doesn't the federal government have more important fish to fry?

Remember the program to catch and eliminate "TERRORISTS"?

Remember the amount of "Illegal Aliens" sneaking across the southern borders of the US?

While we tend to foster the open door immigration policy in the US the FCC is centered on prosecuting American Citizens. They should be using there equipment to track down terrorists and illegals.

Professor,
I think Ameritron amplifiers are the best buy
on the legitimate market. The primary diference
between Ameritron and other legitimate makers of
amplifiers is that Ameritron's power supply is large
enough to give full rated output for the tube(s) or
transistors used, when used correctly. As with the
other 'big name' amplifiers, you don't pay for the
'name'. They aren't the prettiest amplifiers around
but who cares?

I cannot comment on if the "busts" in Texas are true or fabricated. I can say I have been on the wrong side of the court room in a Superior Court case, Municipal case and civil case. I have been through the system and wrung out like a wet towel.

"How so? Not guilty verdicts usually enable one to seek compensation for everything they were put through."

Not in all cases. In a civil case you can usually recoup some if not all costs. But in a criminal case esspcialy Superior Court cases you cannot. Unless you can prove malicious prosecution. I was acquitted in municipal of a petty misdemeanor, but I still had to retain a lawyer that cost money and I was not allowed to seek damages because a judge deemed the prosecutor acted in good faith. Despite the fact the complainant issued a letter to the DA one week after my arrest and demanded the charges be dropped. I had enough proof of my innocence to convince the complainant to write the DA. They paid $1000 of my attorneys fees (being a real dumb ass I was involved in several cases at the same time so owed quite a bit) And in turn I agreed that under no circumstances would I attempt to sue or publicly/privately slander or libel them. The DA told my lawyer flat out "I don't take orders from _____" and continued to try and prosecute me for a misdemeanor I obviously did not commit and even if I did I would have got a $500 fine, woopty woo. Some DA's have their heads firmly inserted in ass. Again I can tell you from experience that in a criminal case you will most not likely be compensated for losses from defending yourself.

"Not so. It's called the freedom o information act and the feds are not absolved, unless a gag order was issued."

This is a very misunderstood act. The information is public but not all must be disclosed. Check the FBI web site. They have a few documents online. You will see how much information is "Blacked Out" On top of this it is much like "free air and water" at a gas station or "free credit report" it is legal to charge a fee for the information even though the government has mandated we be aloud to have access to it and access for free. So no it is not free in all cases. And many courts have gotten very liberal in what they consider a "fair" fee for obtaining the information for you.

>For clarity here are my exact words:
"I'd love to but I'm a bit busy putting the financial hurt on those in my area, so far 27 this year. Some of them are (were) hams. It's much easier than you think. I'm sure that if the FCC was standing in front of your house you wouldn't be so "brave" as to make freebanding claims.

Yeah! You're a man! But you'd surly be crying if you were standing in court. I see it happen all of the time. Guys make big claims of how big their amp is until the FCC marshal is holding it in his arms. Then the guy is crying like a baby. I'm sure you'd be no different."
"Twistedhed" <twistedhed@webtv.net> wrote in message news:3462-3D11F31D-190@storefull-2314.public.lawson.webtv.net...
From: wb5rue@yahoo.com (Kevin Muenzler, WB5RUE)

>I think twisty is twisting my words. I don't believe I ever said successfully prosecuted I said "busts." If I did then it was misleading and unintentional. <<

I thought this was a lark, BUT since you are now putting it forward as truth, you did indeed say BUSTS, but you also said they were getting hit in the wallet (fines) which would lead to the question of WHO was imposing these fines. If there is no prosecutorial involved, there would be no fines.

>I don't think I said "busted" anywhere in that post. I never took personal credit for making any arrests. Nowhere did I say fines either. I could file suit against you for whatever reason I can think of, "you're ugly and your Mamma dresses you funny" is a good enough reason. Not that it would go anywhere, this state has laws against frivolous lawsuits so it would cost me more than it would you, but you would have to hire an attorney to answer the suit or charges.<<

Not so. Here's some free legal advice that lawyers do not want you to know. Show up at court, ask the court's disposition in the matter, especially if you filed to have the suit/charges dismissed. The court will tell you where they stand. If you don't agree, tell the court you need to retain counsel, THEN you get a lawyer, not before. It can save thousands.

>That's exactly how any criminal/civil charge works.<<

Separate courts, having nothing to do with each other.

> Every one of these clowns had to hire a lawyer to defend him in court. That's where the "financial hurt" begins. Even if the guys don't hire attorneys there are court costs. <<

Only if a ruling is against the defendant.

>All I can say that MANY (sadly) were hams. <<
Why is that ALL you can say? Why can't you elaborate, after all you mentioned 27 pops resulting in fines, did you not?

>I said nothing about fines. Again you are twisting my words and putting new ones in there. I can't elaborate because YES it is against the law for me to give any information about the trial/pending trial until it is finished. Remember, these are FEDERAL cases. <<

Ok, so these are now federal cases. As long as you understand that your mentioning of civil court has no place, now.

>It's amazing what happens to some people when they get their Extra Class license. It's like they get stupid or something. They think that the FCC isn't going to mess with them because they have "topped out" in their license. It's a BIG eye opener for them! There are almost as many Extra Class hams busted as the rest combined! SAD! It was me and 14 other FCC Official Observers who work the San Antonio/South Texas area.<<

Oh, man. This gets better by the day. You sure you don't want to reword that last sentence, 'cause I can say for absolute certainty that as of right now there are only 54 active "field agents" in the country, and you are claiming 14 of them in Texas? And that YOU worked with them to bust hammies/cbers? Don't think so.
But wait a second, you didn;t say "field agents',
you claimed they were "Official FCC observers".....who coined that term, and what exactly is it?

>Did I say "field agents?" Nope, no need to reword that last statement. Several years ago the FCC, at the urging of the ARRL (American Radio Relay League) instituted the Official Observer program. <<<

Yes, they did, NOT the FCC.

>These licensed hams having at least an Advanced Class license go through training in the FCC rules and regulations as well as other legal training are certified by the FCC and the ARRL. We have no enforcement powers only "observation powers." But our word is given the same weight as an "FCC agent" when it comes to notifications of violations or court witnesses. <<

Not even close.

>Check out the ARRL web page <<

No thank you.

>http://www.arrl.org and search for "Official Observer"
here's a few.
http://www.arrl.org/news/stories/1999/04/08/3/
http://www.arrl.org/FandES/field/org/oo.html
http://www.arrl.org/news/stories/2001/03/28/1/
Even better, go to the FCC web site at http://www.fcc.gov and do your search. Maybe you'll learn something. <<

Like your tall tales of Texas tyrants?

> Once we track the person down using direction finding equipment, using Audio recording and such we turn all of the information over to the ARRL who turns if over the FCC.<<

Way too many flaws in this..to begin with, you can be lying through your wazoo of what FREQUENCY the tapes were made on..the feds have to catch you themselves.

>Nope, wrong again. Check out the web pages at the ARRL and FCC. Yes I can be "lying through my teeth" <<

Of course you can, which makes me correct in the above statement, not wrong.

>but why risk it.<<

Dunno why all those hammies geting popped
are always risking their license doing malicious jamming of repeaters or of anter hammies station or even worse, business....and you're biggest cry about cbers are amps and freebanding.

> It's called purgery, fraud, manufacturing evidence and a dozen or so other terms that carry unpleasant consequences. <<

Damn sure don't deter jhammies though, eh?

>Besides it would cause me to lose my license, fines, jail time and civil lawsuits. Hams who volunteer for these positions generally have a bit more integrity than you give me credit. <<

You sell yourself short. I gave you the benefit of the doubt until you got a bit carried away.

>Once they've been through the training they are trusted a bit more than the average person.<<

That you even put forth this belief speaks for itself.
Even if the feds receive complaints from the ARRL, which may or may not trigger an investigation based on 2 main critierias..safety and number of complaints, no way will they be made to appear in a court room without at least several months gone by and several attempts at contact by the feds which go ignored.

>The ARRL and FCC are very closely coordinated in this effort<<

More happy horsepucky.
The FCC simply tolerates the noise made by hammies such as yourself concerning your willingness to play space cop. They have not endorsed such an effort.

> and only the most flagrant and repetitive violators are pursued. I send out 5 or 10 notices of possible violations each month to hams. If you'd like to see one send me your snail mail address in personal mail and I'll send you a blank one.<<

Post it here as I am sure many would like to see your introductory letter of warning concerning radio behavior you attempt to police.

> Most notices that I send are due to improper identification (not at least every 10 minutes). <<

You have GOT to be kidding.

>There are other criteria such as signal quality, language, out-of-band, etc. Yes it does take time for the FCC to actually act, if they do at all. Another thing, we're not "all bad." Part of our duty is to notify hams that are showing good operating practices as well. I send out 20 or 30 of those a month. Yes all of this is at my own expense, I'm a volunteer so I don't get paid.<<

I personally take issue with the "duty" aspect. As you profess, you are a volunteer, indicating you have a choice. Equating "duty" with the status of volunteer radio cop merely lends an artificial face to what actually is taking place. I do comprehend certain type people need powertrips and that the word of choice and preference (duty) for justifying such bizarre behavior certainly camoflauges with efficiency the sadness and desperation of those that identify with such.

>The ARRL provides all of the paper and I provide the postage to send it out.
We turned over information to about 35 people since December and there are 27 that I know of that are either on their way to court,<<

Keep digging.

>Whatever. Keep reading.
in court or have been through court. Yes, it's very expensive for them even if the are found "not guilty." <<

How so? Not guilty verdicts usually enable one to seek compensation for everything they were put through.

>No I'm not going to give you names, that's illegal. <<

No, it's not at all illegal to give their names, but seeing how you already claimed they were busted and fined, that in and of itself can possibly lead to legal trouble if you name names if what you claim never actually took place. In lieu of that, I can see why you would be reluctant to say anymore.

>In FEDERAL court it is illegal to divulge ANY information about defendants or court proceedings without the express permission of the court. <<

Not so. It's called the freedom o information act and the feds are not absolved, unless a gag order was issued.

> I'm not about to go through the procedure to get that express permission to satisfy your curiosity.
But if you want to spend the money you can look them up yourself. Most are being prosecuted at the Fifth Circuit in San Antonio or Dallas.<<

It can be done for free.

>Nope, there are costs. <<

This point I will not argue. Go on paying.

>The court isn't just going to hand over information to you for "free" and unless the case has run its course you won't get anything without the court's permission. <<

See above.

Let me get this straight...
the FCC is already prosecuting 2002 complaints from the ARRL in circuit court in Texas? Go on, now.

>Kevin, WB5RUE
You got it. Most are from violations last year and for violations going back years but yes they are in process for some this year as well. The OOs gather information, the ARRL gets into the act, more information is gathered. It is forwarded to the FCC, more information may be gathered and whammo the guy gets a Notice of Apparent Violation (NAV) and it's on to the judge from there. If the guy doesn't respond within the allotted time the FCC's charges stand and the fines are levied. If there is a dispute it goes to court. Few go to court because the evidence is overwhelming. We had one a few years ago with video tapes of the guy and audio recordings of the guy interfering with a net on a repeater. This guy had a VERY distinctive voice so it was quite obvious that it was him. That, along with the video, and the guy still denied it! It went to court and cost him thousands of dollars and his license. Like I said, we don't have any enforcement powers and are not allowed to directly contact the person under investigation. All we do is gather evidence in the forms of audio tapes, transmitter characteristics, video tapes (from a distance) as well as a few other things but we can't contact the individual. This is for our own safety and for the integrity of the case. If the guy doesn't know he's being watched he's more likely to make more "evidence" for us to gather.
Kevin, WB5RUE
wb5rue@arrl.net<<

Hehehehe! We will all rest easier knowing you guys are on "duty." With your federal-aided training and super-sleuthing techniques, coupled with Sparky's self-proclaimed "Twisty-Buster", each of you asking for my real addy is a confession of failure concerning your stated objectives.

LOL. I don't think so Oris.

> So if you look at the trash on rec.radio.amatuer.misc it gives
> amateur radio a real big black eye.

If you're right, then CB is getting a busted jaw, a cracked skull, and
a broken nose because of this NG.

> Then you compare it to the stuff in
> this news group and this news group wins hands down.

How do you figure? The guys in the ham NG's may be little boys calling
each other names in a schoolyard. (Hey, that sounds like RRCB, too!)
but they are not planning illegal operation, trading and selling
illegal equipment, discussing schemes to beat the law, and thumbing
their nose at the FCC.

> Most hams think that
> CBers are low life's.

If you read this NG, one gets the distinct impression that dishonesty
is an important part of CB.

> Well I don't; just like everything else good and bad
> with every group.

That's about the only sensible thing you've said so far.

> The thing is the bad on ham radio show up in the
> newsgroups and the good for CB radio show up in the news group.

Oris, read some of the archives of this NG and get back to us. Mark
Fuller once did a compilation of responses to a question of how to
resolve CB interference. Virtually every response given in this NG
advocated some illegal and violent act: threatening, shooting,
stabbing, hanging, pinning coax, destruction of property, arson, etc.
On the other hand, there are people like Dick N0BK who
occasionally contribute a spirit of moderation and sanity when they're
not trying to prove they're one of the boys.

> What does
> that do for amateur radio? So as long as they are off the air? I don't

2249. Midland 77-250a problems

Newsgroup: rec.radio.cb
Date: 2002-06-23 20:04:19 UTC
From: hylomar@yahoo.com
Message-ID: <c4cbb09d.0206231204.6bd1728b@posting.google.com>
Source record: 128155

I bought a Midland 77-250A at an auction yesterday. When I hooked it all up, all I get is a clicking sound when the mic is pressed. None of the transmit lights come on. The channel indicator is working. Has anyone heard of this problem? I imagine it is fairly simple to fix. Also, maybe I am not doing something correctly? I have also tied it with an external speaker, same thing.

Thanx, Chris

Put tinfoil over the mike if you want to sound distorted. It's easier
to undo when you get tired of it.

Pappy,
Come on, be reasonable. It isn't the FCC's job to
track down 'terrorists' or illegal aliens. There are
other govenment agencies that do that, and who do use
FCC facilities to do so. That's like saying that if
you have a flat tire on your car, the local druggist
should stop what he's doing to change your tire. You
have to use a little common sense. The FCC does hunt,
and 'track down' criminals, those criminals that have
broken communications laws. That's their purpose, says
so right in the act of Congress that created them.

No big deal. Just hop on the net and take some of those practice
tests. The questions are from the same question pool, so if you get it
wrong on the practice test then you probably got it wrong on the real
test. Then find out what the correct answer is and why. Too simple. So
simple, in fact, that he probably should have done that before his
-first- test.

BTW, do they tell you which ones you got wrong if you pass the test?

> Oris

Judas Iscariot Holy Roller Priest, not you too. These mods are based on a theory of AM that was creaking when Calvin Coolidge was President and got some experimental use in the 30s and 40s to preserve finals by lowering carrier during dead air. The last gasp of Antique Modulation on the ham bands saw some minor use of these techniques to keep old rigs creaking along. It didn't work any of the times and drove listeners mad; still does.

First off, cutting the limiter actually costs you talk power because as well as limit to '100%' i.e half of carrier power, the limiter helps raise the average level of voice by knocking down the peaks and thereby raising the average modulation level from the usual 20-25% to something near twice that. Broadcast stations use 'brick wall' limiting to get the loud audio (with no dynamic range) as do their commercial suppliers and J Lo's audio engineer. And you want to cut it???

The process is called mixing and it has been part of electronic theory since Armstrong invented the superhet in the 20s. A mixer requires that one signal be two-thirds of the total energy in a non-linear device. When it is not, at some point the power level called for to mix falls below zero and the waveforms are clipped and distortion results. In a standard AM transmitter, this causes widening, audio distortion, and what is called 'buckshot' but does not in any way add to the audio transmitted within the receiver passband. In a receiver, the front-end collapses when this rule is not met and you get the classic rice box spongy response. The second detector is also a mixer and if one did manage to get more audio with a carrier, it too would go into paroxysm -- which every SWL has experienced as selective fading resulting in an unreadable signal. This is really why SSB sounds like Donald Duck with a headcold.

Swing is bullshit, overmodulation is bullshit, AM is bullshit. You have a decently performing rig; leave it the hell alone. Or better yet, learn about audio processing techniques and how really to peak and tune a transmitter.

Three rules of technicianing:

1) Know when to quit.
2) Know when never to begin.

3) Do not try to outengineer the man who built it armed with two fanzines and a parts catalog.

Everything. Whether you or I like it or not, it happens everyday on the CB. Everything that occurs on CB can be discussed here. I would rather they do it correctly and safely if they are going to do it at all.

Would you go to a drug users group and whine that what they are doing is illegal? Would you prefer they have to hide from you, and because of that, they get the wrong information and die because of you? That's all you're doing here.

Not all that much anymore. The pissing contest moved to
rec.radio.amateur.misc from some alt. groups after some ISPs got mad but
the whole caboodle is quietly dying. The bands are a lot clearer since
some of these swinging dicks got Rileyed or expect to be soon. Goosing
them now and again is highly recreational. Even JJ comes here now and
again out of boredom to try to stir the soup and he isn't worth the goose.

The best use of RRAM is to call it up, hit Mark All Read, and moving on
which does not bring up the crossposted crap on any group you care about.

The Velvet Codpiece
tell no little lies.

Sparky, how can you tell that to people who know everything? lol
He said the test was changing in July so he wanted to take the test
before it changed. perhaps after $50 he will now study.
Actually he said his problems were with the questions regarding the formulas

> BTW, do they tell you which ones you got wrong if you pass the test?

From, what I have seen no and what he told me, No, not sure if it is a rule
that they can't or not.
I heard a guy on the repeater today who must have passed at the same session
as this guy and he
said he had 2 wrong. So they may tell you how many you got right and wrong.

> Sorry, I misunderstood your remark.

thats ok I probably wasn't real clear on it anyhow.

Hello,

Are you looking to have your own webpage for your CB stuff or a dedicated page on what you know...I am looking for people who want a FREE web page - as an editorial for a NEW website community. If you know your CB stuff and want to show it off...let me know and email me direct. The idea is to have your own spot in the community - so - need the info - 10-50 me back and lets chat...I do have ICQ, YAHOO MESS, ICQ and of course email...talk ya later..

I also build websites for CB clubs & people - They must be of the NON-PROFIT type...that way - you get it for FREE...:)

JS

And there is STILL that pesky ITU requirement for Morse Code for access to
spectrum below 30 MHZ. Yes, that might go away a a few years, maybe not.

And getting nailed by Riley right and left for doing so. I say the more the
better,
and good riddance to bad rubbish. At least, SOMETHING is being done. For
the
bad boys of ham radio that some shout and point to in here, I'm glad to see
the en-
forcement activities. I'd rather be a part of a radio service that has
strict regulation
than any lawless one. RH is still working on those hard-asses that think
their sh**
don't stink. The unlicensed services are next..... The 10
meter intruders
are already finding out that it doesn't pay. Er,uh, like the Florida guy.

Yep your right allot of the amateur radio operators are breaking the law then deny deny deny. Tune up and down the general part of 75. No telling what you might hear. You hear hams wining about CBers using illeagal freqencies but you will hear hams on 60 meters. These will be the same guys that will complain about freebanders.

ITU did away with CW A.K.A. morse code. years ago. Ship to shoar did away with
it 4 years ago. The United States, Canada, and England are the only contries
that require CW now. The requirments for CW are next to nothing and will be
nothing in the next 2 years.

Well he mentioned my name 66.7% of the
time, about me, concerning me, so I would say
the post is at least 66.7% directed at me.

Landshark

>safely if they are going to do it at all.

If they don't know how to do it safely, don't you think that will
prevent many of them from doing it at all? Probably not...

But if you are so concerned about safety, maybe you should be thinking
about these dipwads handling a full amp at a thousand or more volts.
I'm sure you are aware that it takes far less than that to be lethal.
And why haven't you posted anything bleeder resistors? Or about HV
insulation properties? How much risk is there for fire when no
consideration is made for arcing? Have you mentioned anything about
unshielded high-power RF used in close proximity? In all your posts
have you ever mentioned the "one-hand" rule? Or how about rings?

And BTW, it doesn't matter what kind of IMD figures your tube has if
the harmonics are coming from the previous stage. What are you using
for a driver? Are you using a tuned input or are you trying to skate
by with a swamping resistor? Could the harmonics land on an emergency
pool frequency?

No, Scott, you are not concerned about safety; that's just a ruse to
justify your illegal intentions.

>Would you go to a drug users group and whine that what they
>are doing is illegal? Would you prefer they have to hide
>from you, and because of that, they get the wrong information
>and die because of you?

If they foolishly mess around with stuff they don't understand but
know could be lethal, then they deserve what they get.

What's the matter -- are you allergic to learning? You should listen to him, because everything he said is true. He also left out quite a bit (I assume for the sake of brevity). Such as the fact that the final of many CBs are Class C, and therefore non-linear. That means bumping up the input to that stage will require retuning of the output filter and/or rebiasing the final. If the final -is- linear, then you need to be concerned with manufacturing quality: did they properly heat-sink the transistor? (BTW, some techs have the same rule for using heatsink grease that they do for soldering: "the bigger the blob, the better the job", which is not good at all for heatsink grease -or- solder). Are the traces large enough so as not to cause a voltage drop on the peaks? Are the PS filter caps large enough to keep from sawtoothing? And if the final can take the extra input, can the driver handle the extra load? Some of those drivers aren't even mounted on a heatsink!

And after all that, what increase in range do you expect? Do you know that in order to just double your range you need to quadruple your power? OTOH, did you know that a good antenna can give you far better gain than any "tweak-n-peak" at the local trailer-park office/CB shop?

In your previous post you claimed to be a ham. You made some blanket statements about hams based on your experiences as one. Since you hate ham radio so much, I figured you'd have no problem giving your callsign, since it means nothing to you anyway. But I guess I was wrong. You're obviously scared shitless of anyone knowing your name. Who knows what other reasons you have to hide. Maybe you're involved in crime or theft....or worse. I don't want to know. Please keep your personal details to yourself!

>Bring your punk ass down to Springfield Missouri and let me

2301. Re: More on 10 Meter Incursions

Newsgroup: rec.radio.cb
Date: 2002-06-24 04:23:28 UTC
From: 'Doc <w5lz@icok.net>
Message-ID: <3D169EB8.CE56CB7A@icok.net>
Source record: 128207

Oris,
A new class of license for the CB'ers and freebanders?
In other words, you want a class of license that has no
testing, is that correct? The testing for an amateur license
is so simple now that it's almost a joke. If you don't want
a license enough to study for it, why should you have one?
It isn't a 'right', it's a privilege. The use of the CB
band isn't a 'right' either, it's a grant from the FCC. It
does make a difference.
This country isn't a democracy, it's a republic. Big
difference, and what they both mean used to be taught in school.
Guess that isn't the case anymore, too bad.
Limits on distance? Take a look at the stated purpose of
the CB band. It's still the same, it hasn't changed. Makes
fairly good sense when you look at it from the right perspective,
doesn't it. And as far as the petition for doing away with the
150 mile rule, have you ever read that petition? The arguments
used
were facetious, to say the least. It wasn't thought out very
well
at all, and just came across as stupid.
'Controlling' the CB band is probably the last thing the FCC
cares
about doing, as long as other services are not interfered with.
But
it really wouldn't be very difficult if they really wanted to do
it.
All it would take is they're closing the CB band altogether.
Wouldn't
be very popular, but since when did that ever matter. If there
are
enough problems caused by CB'ers or 'freebanders', do you really
think
they won't do it??
FRS will never replace the CB band. It's too short range,
and there's
just not a lot you can do with an RFS radio for a 'better'
signal. Power
certainly isn't the answer, not at 460 Mhz. And considering what
they do
with AM and SSB, can you imagine what the 'CB techs' will do with
FM? It
doesn't bare thinking about.
As to the 10 meter incursions. Be honest, how many

'innocent' people
do you really think are doing this? Sure, they want a quiet
place to be
able to talk to their friends, but that's no good reason. The
fact of the
matter is that they know they aren't supposed to be there. All
the excuses
in the world are just that, excuses. And not very smart ones at
that.
'Doc

Oris,
Legalizing an illegal activity isn't the way to 'cure'
a problem. That's like saying that legalizing drunk driving
will 'cure' the problem that drunk driving causes.
The ARRL says the amateur ranks are decreasing, and since
when has the ARRL had any clue as to what is really happening
in the amateur community? It's been over 15 years, that I know
of, since the ARRL has done anything constructive for amateur
radio. They have about as much 'believability' as one of our
former presidents has about sex.
The only people that CB'ers can blame for the shape the CB
band is in today are themselves, and a lack of discipline. Why
should that be rewarded with more privileges? I don't care what
it is, if you don't work for it, you won't appreciate it. And
when
you do work for it, you are naturally not pleased when someone
takes it away from you. What you're advocating with a 'no
requirement'
license is doing exactly that, taking something people have
worked
for away from them. (If you don't think that's what would
happen,
you obviously don't understand human behavior very well.)

Oris,
The NG's are the 'front lines' for recruiting new
hams? Really? I can't believe you really mean that.
I also have a hard time believing that any comparison
between ham/CB newsgroups would show either coming out
ahead on anything, good, bad, or just plain stupid. I
can see where either type newsgroup would give a 'black
eye' to which ever group they represent.
I think if you took a poll of amateur radio operators
you would find that the vast majority wouldn't want the
11 meter band back. Who needs it? And as far as 'handles'
being legal call signs, oh man, can you imagine the problems
with that? How many people use the same 'handle'? Good grief,
what a mess (LOL)!

This mic is like new only used it 2 or 3 time then put it back in the box.
Echo master plus classic desk mic with 4 pin wired for cobra uniden galaxy
radios.
Has 2 vu meter roger beep on/of slides for echo and modulation.
and battery light.
Takes one 9volt.
$70 shipped lower 48 states ups insured.
Please e-mail me direct or for pics of the mic.
These mic's sell for $79 plus shipping and don't come with mic plug new.
And mine is as good as new.

2317. Wilson Trucker 2000 question

Newsgroup: rec.radio.cb
Date: 2002-06-24 10:33:11 UTC
From: akcarl@gci.net
Message-ID: <ef760b3e.0206240233.41de37ca@posting.google.com>
Source record: 128223

Is it normal for there to be a rattling sound coming from inside the loading coil housing when the housing is shaken or tapped on? Sounds like the loading coil is rattling. Noticed this right after removing it from the packaging (brand new antenna). This has been "The Antenna from Hell". Have tried everything to tune this antenna for a low swr. New 18' length of rg58 a/u coax. Checked and double checked grounding. Even installed short grounding straps from the all-metal roof of vehicle to the metal frame of vehicle body to be sure that wasn't the problem. Bare clean metal contact on grounding connections. The best swr so far has been about 2.8:1. If I lengthen the whip, the swr goes up above 2.8. If I lower the whip, the swr goes up above the 2.8. The installation is almost in the center on the all-metal flat roof of an old 1979 25' Winnebago motor home. I am using the Trucker 2000 with the 10 inch bottom mast. Have checked and double checked center conductor connections to antenna using my DMM. With the coax disconnected at the radio, continuity from the bottom of loading coil to the whip is good (0 Ohms). With the coax disconnected at the radio, I get no continuity or leakage from ground to the whip which is what everything at Wilson's web site says is correct for the Trucker 2000. With the coax disconnected at the antenna and a 50 Ohm dummy load connected in place of the antenna, I get a nice 1.1:1 swr. I have installed and tuned many cb antennas before but this is my first experience with the Trucker series. Could it be that you can't roof mount a Trucker 2000? Any suggestions appreciated. Thanks.

OldProspector

Have you tested the installation with a known-good antenna? Also, knowing that the T-2000 is a 3.5kW antenna expressly made for illegal operators, have you tried testing your SWR without the amp in the line?

However, they all got along amongst themselves without a problem. So who
was the square peg in that situation?

And who makes the determination of what constitutes a "real life"? Those
guys were happy doing their thing. Sorry if it didn't agree with your
standards. From their perspective, I'm sure they had some misgivings
about your attitude as well

> We now refer to them as HAMBO's or just Dweebs!

That's nice. Make disparaging comments about people who have the decency
to follow the rules. That's alright, they're too straight laced to have
any fun right?

> I will concede that things have changed in the last 2 decades.

The understatement of the century.

>..but everything I see and hear confirms that it is pretty much same
> old same old (man).

It is nice that in the face of the general decline of morality in our
society in general, that some people still retain integrity, and some
sense of decency and consideration.

> On the other hand many CBers and Freebander's have much more to offer in the
> way of friendship (with no strings) and just plain old down home courtesy....

...While at the same time openly advocating the complete disregard for
the rules and regulations that govern the service, or consideration for
other users, with whom, they might be interfering with. You call THAT
courtesy?

> however don't mess with them or you're likely to get the reality check you
> deserve for trying.

God forbid someone calls them on the carpet for the laws that they've
broken. I'm sure that they somehow feel justified in breaking laws that

they don't agree with. The problem is that it's not their call to make.

> As for me....I like talking DX on 11 meters and have no plans to renew my Ham license....it would just be
> a waste!

Far be it for me to bring you back from the dark side. If you feel more at home with the free-for-all crowd, and have trouble following rules, then maybe you are better off on CB. Just don't complain when one of your bretheren decides to make your radio experience less than pleasurable, by interfering with you. He, afterall, is following the code of CB which is, "no rulz!".

OldProspector,
No, any noise coming from inside your antenna
is NOT normal. It would also explain the problems
you've been having. If possible, I'd take it back.
If you can't take it back, Save the whip, throw the
rest away, count it as a 'learning experience'.
(Then if you ever see the guy who sold it to you,
use the whip on him.)

LOL, expressly made for illegal operators? I'd bet the majority of wilson antennas aren't connected to more then the back of a radio. I would also bet you won't see many wilsons connected to anything over a pair of 2879s. Might also consider the antenna tunes up nicely on 10... And absolutely no where, did i see him mention an amp.... Isn't it enough to quote rules/regs, and gripe about illegal activities??? Now you piss and moan about power rating, and non existent amplifiers......

MOST test groups I know of, mine included, will tell you how many you missed. I don't have a problem with it. If you only missed by a couple and I feel you may want to re-exam and have a good shot at doing better, I'll offer the chance - providing I have a different version available. If you BOMBED it, I'll tell you that you need to do some serious studying. I can get a feel usually for those who failed by making simple mistakes as opposed to those who "truly" are not prepared. I won't put our examiners through a "waiting" session for some one obviously not prepared.

I had a lady come before us once. She claimed she had more knowledge of radio than all 3 of the examiners together. Well, our licenses are in our wallets. The proof is in the pudding. We said, you must be pretty well prepared then - to take the exam! She BOMBED the Novice written 3 times, taking 3 different versions at her "insistence". That was before my policy changed to - 1 bomb, you're out!
Then she blamed US for rattling her when we asked for the required ID prior to sitting for the exam! Go figure! What ticked me off, was her "boasting" then accusing US for her failure.

There is of course some psyche involved. For example, people freezing up. I had the pleasure of testing the son of the man who gave me my Novice exam. He didn't do so well. At the father's insistence, he didn't retest and was going home to study some more. The father felt he could've done better as he was passing with 100% on the computer at home. Hearing this, I sat and talked to the boy before he examined the next month. He told me he got scared. So, I said.... Son, I know you did ok at home, your dad said so. He said yes, I did! I just got scared. So, I said, "When you get your papers today... Close your eyes, put yourself at your computer, forget you're here with all of us. IF you can do ok on the computer, you can do it here too. The questions are not any different. Block out all that you hear, read the tests and answer them just as if you're at the computer. Take your time. Well, it paid off, he passed. He even seemed calmer. So, as an examiner, you have to kind of get a feel for your test takers too. Little bits of advice can go a long way to helping them be successes at YOUR exam session. I don't know about you, but I love congratulating those who pass. I hate having to bear the bad news. It's almost like passing the death sentence.....I've tested many, too many to recall all the names of. But when I go to hamfests, I have an abundance of them still coming up to me years later, thanking me. Hey, I only gave the exams, they passed on their own merits. But, perhaps it was the thoughtfulness of the advice and politeness we extended. Whatever it was, it feels good to be remembered in a "good" way. I'll take that any day.

These tests aren't hard. ANYONE can pass them IF you put forth a little EFFORT. Most who fail, seem to lack the latter and find other reasons or people to blame. You're given the questions and answers. It's just a matter

of learning enough to pass them. Hell, anymore, no prior knowledge is needed. One can read the book through a time or two and pass. Maybe not understanding it all, but enough to pass. When I took my exams, the FCC gave about 10 sample questions on a letter head that you "may" see. Just to give an idea what "topics" were covered. Basically, you had no idea what to expect. IF you were NOT prepared with KNOWLEDGE, then you wasted a trip pure and simple and were only fooling yourself.

So, if you've failed, READ THE BOOK a couple more times. ASK someone who has been around a while to explain that which is unclear.

From an examiner who's been around for a while.....

To those who do "think" they know everything.......you're dead in the water. There is much more than meets the eye. Some even defying theory itself. Besides, theory is in classrooms and books under set circumstances. The "real" world doesn't offer "perfection". As for me, I do NOT and will "never" claim - to know everything. I'm still learning and rejoice with every new thing I do learn or new technique developed to make troubleshooting/repairing easier.

My two cents.........

keep it off the airwaves. But there is a problem with that. The news
groups are our front lines to recruiting new hams

>LOL. I don't think so Oris.<<

LOL! You don;t think, period.

"So if you look at the trash on rec.radio.amatuer.misc it gives amateur
radio a real big black eye.""

>If you're right, then CB is getting a busted jaw, a cracked skull, and
a broken nose because of this NG.<<

There you go again, trying to draw a comparison. All those usenet hammie
groups are filled with hate...the trouble in here can usually be traced
back to a no-code such as yourself that has had his clock cleaned by a
cber...you know the type well, the type that makes your IQ level appear
on par with the sub-species in New Guinea. Just because it's applicable
to the hammie groups you help trash doesn't make you successful in your
endeavors here. You're another in a small list of failures among present
company...3 of you in 2 days., Lelnad pops a boner when cb is
mentioned,, Frank can't remember who he is, and Muenzler is narrating
figments of the way they wish it were.

"Then you compare it to the stuff in
this news group and this news group wins hands down."

>How do you figure? The guys in the ham NG's may be little boys calling
each other names in a schoolyard.<<

Or hiding behind a skirt, tossing pebbles at those bigger, stronger, and
more superior than yourself, those that you yearn to be more like, and
giggling incessantly about it like a schoolyard marm.

>(Hey, that sounds like RRCB, too!) <<

But when your yap is sucking down that cheap liquor and busy lying to
impress someone in the real world, this is quite a nice place, actually.

>but they are not planning illegal operation, trading and selling
illegal equipment, discussing schemes to beat the law, and thumbing
their nose at the FCC.<<

We're not thumbing our noses at the FCC, we're thumbing them at failures
like yourself,, laughing hysterically and simultaneously giving you the

finger. The rest of what you mention is perfectly acceptable to discuss. Since it gets your panties in such a sniff, I suggest you find a more suitable hobby, one that doesn't affect your easily-hurt feelings and ego, and one that doesn't take charm, wit, ability, common sense or anything beyond a double-digit IQ.

"Most hams think that
CBers are low life's. "

>If you read this NG, one gets the distinct impression that dishonesty is an important part of CB. <<

Only by low-lives such as yourself which we all validate at will and whim.

"Well I don't; just like everything else good and bad with every group."

>That's about the only sensible thing you've said so far.<<

Yea, but you've never say anything sensible, hence the wearing of the skirt.

"The thing is the bad on ham radio show up in the newsgroups and the good for CB radio show up in the news group.

>Oris, read some of the archives of this NG and get back to us.<<

Yea, start with Lelnad and Dogie.

>Mark Fuller <<

..does't exist and is a hero and legend in his own mind.

>once did a compilation of responses to a question of how to resolve CB interference. Virtually every response given in this NG advocated some illegal and violent act: threatening, shooting, stabbing, hanging, pinning coax, destruction of property, arson, etc.<<

Well hell's bells...you mean you were shilling way back then, too? Loser lifer, huh?

> On the other hand, there are people like Dick
N0BK who occasionally contribute a spirit of moderation and sanity when they're not trying to prove they're one of the boys.<<

And there are clowns like yourself, who have never managed to be accepted by the boys, so they act like a girl and attack the boys they like on the playground.

"What does
that do for amateur radio? So as long as they are off the air? I don't think that's good enough. I don't have a answer just a observation. "

>No one expects you to have the answers, <<

I don;t even know Oris, but I can say this is untrue. No one expects YOU to have the answers. Coming from anyone but you is a plausible scenario of honesty, but let's not lose sight of collective truth..... it is only YOU we expect no answers from.

>but your observation that the newsgroups represent real life are quite a bit off the mark. <<

Keep repeating it, you may learn it.

" 73 Oris
I am a firm believer in amateur radio's 100% annexation of the 11- meter band including operators! The use of handles as call signs on 11 meter new
amateur radio band should be legal! "

>As previously discussed elsewhere, your proposal makes no sense.<<

Neither did a certain QRZ page 'till I proofed it and alerted the nocode hammie to the junior high-like mistakes laden throughout.

Hello Old Prospector:

I agree with the rest of the replies here, the antenna making noise is not right.

Sounds like you verified the coax with measuring continuity and by replacing the antenna with a 50 ohm load, nice move, you have obviously done this before.

I would suggest the next step is to try another antenna. The only other things that could cause such a SWR reading would be a near by metal object, or measuring the SWR thru a Linear Amplifier.

But a experienced guy like you I would think knows all this. Please let us know what you find that is the fix.

Jay in the Mojave

twistedhed@webtv.net (Twistedhed) wrote in message
news:<10678-3D13782F-2@storefull-2312.public.lawson.webtv.net>... The
guy was an idiot and deserved what he got. No one is taking issue with
this enforcement. In fact, most of us probably support it, despite your
attempts and innuendo at suggesting otherwise. This bust was a good
thing, as are most of the FCC busts....they are usually hammies with no
respect for the law. It is good that we do not tolerate such behavior
such as jamming repeaters. Others are more concerned with not IDing ever
few minutes. Yet others (like the FCC) are concerned with non-trivial
persuits.

>Gosh, Twist.<<

Can't stop touching yourself while thinking of me, huh Lelnad?

>That brings us around to the question (once again) of who
decides which laws shall be obeyed and which laws shall be ignored?<<

Which brings us to your severe recall and retainment inability (again).
This question was answered.

The Mighty Twistedhed?<<

(Chuckle) All don;t see me as their mighty superior, Lelnad. Only you
have remained at my feet so loyal like an obedient hound.

>The Teeming Rabble? I think not.<<

What you think has never mattered, ,...which explains your bizarre
behavior for the the need to act as another.

>For all your inflammatory talk about "Natural Law" <<

Refresh our memories to what you refer. You claimed my claim that
nature's law supercedes man's law invalid. Upon educating you that no
matter how angry you get and no matter how many laws you pass, you can't
change natures laws such as gravity, you recognized your sheer stupidity
of the comment, and so for now the furthering of your education is
referrred to by yourself as inflammatory..nyuk nyuk nyuk!

>and your love of anarchy.<<

No, what I love is you looking up to me as the king of all current
reigning anarchy.

>I bet you're glad the Feds are keeping a close security watch on that
power plant down the street from you.

-Aaron-<<

Good thing you're not a wagering man.
Lemme educate you some more,,,,it's more valuable as a hatchery than power plant..the turbines warming the water do wonders for my income. Feds? Not concerned about them. Never was. You have more reason than I to fear the law. You didn't start that upgrade, yet? Damn, going on a year since you said you were upgrading. Seeing as how certain hammies continuously claim the ease of which it is to pass these tests, your upgrade staus speaks for itself.

You just hung out with the wrong croud. I can say the same thing about the "Rabbit Club" of the 1970's. They were crying and moaning about all of the "new blood" CBers coming in as a result of movies like "Smokey and the Bandit" and "Convoy." They thought that they owned channel 3 and would run off anyone who was not a club member. Then there was the "Roudy Ramblers" on channel 20, the "Junior Warriors" on channel 13, the "Sidewinders" on the lower side of channel 6. Boy you wouldn't want to mess with them and make the mistake of showing up on channel 6 on AM whether there was a conversation going on or not!

So don't talk to me about hams being snobs.

Kevin, WB5RUE

You mentioned the roof is all metal, is it aluminum or steel?
If it is aluminum which i am suspecting try mounting a 24"x24"x1/16"
stainless steel plate under the antenna.
It sounds like a counterpoise problem rather than a reflection that is
driving up the swr.
I recommend having the antenna tuned using a MFJ (local cb shop),
usually $5.oo
Also i am not a really big fan of center-loaded 1/4~ antennas aka Wilson's,
Just becauase it costs more don't make it better.....
Lemme guess the tech recommended 1 off his display rack,rat bastard.
Check out the Firestik FSII, it is top-loaded,variable-pitch,wire-wound with
a
tuneable tip for less than $20.oo and u wont b dissapointed.

2343. Re: Kevin Muenzler, WB5RUE claims 27 radio busts this year alone...

Newsgroup: rec.radio.cb
Date: 2002-06-24 15:43:33 UTC
From: twistedhed@webtv.net
Message-ID: <28420-3D173E25-57@storefull-2316.public.lawson.webtv.net>
Source record: 128253

From: local_42remove@hotmail.com (Dave)
>I cannot comment on if the "busts" in Texas are true or fabricated.<<

I can. For certain, what he says took place in the manner he claims, didn't.

>I can say I have been on the wrong side of the court room in a Superior Court case, Municipal case and civil case. I have been through the system and wrung out like a wet towel. <<

Then you have first hand experience. State courts cannot be pigeonholed as they usually have the freedom to rule as they see fit free of federal interference.

"How so? Not guilty verdicts usually enable one to seek compensation for everything they were put through."

>Not in all cases. <<

True..which is why I said "usually".

>In a civil case you can usually recoup some if not all costs.<<

This is when you file your own civil case. A good lawyer will pad this well...seeking reimbursement for lost productive time, mental anguish, gas money, lodging, food, parking, legal expenses, filing fees, barber fees, clothing fees, and anything else you can possibly think of. The idea is to list so many expenses that by the time the court dismisses many of them, you still have enough left over to at least recover your "nut", so to speak. Gaining a judgement in a civil case is the easiest thing to do. Collecting, of course, is another story altogether, and is up to the plaintiff, not the court, to keep track of any assets.

>But in a criminal case esspcialy Superior Court cases you cannot. Unless you can prove malicious prosecution.<<

Or several other reasons I can think of off the bat.

>I was acquitted in municipal of a petty misdemeanor, but I still had to retain a lawyer that cost money and I was not allowed to seek damages because a judge deemed the prosecutor acted in good faith.<<

Correct me if I am wrong, being acquitted is not the same thing as being found innocent, as far as the courts are concerned.

>Despite the fact the complainant issued a letter to the DA one week after my arrest and demanded the charges be dropped<<

I am familiar with this angle...the plaintiff or victim in the case declines to press charges but the state picks it up on it's own.

>. I had enough proof of my innocence to convince the complainant to write the DA. <<

Without getting into the specifics of your case (unless you wish) I can't understand a plea if you were "innocent." Not guilty, charges dropped, etc., is nOT the same as an "innocent" verdict or adjudication.

>They paid $1000 of my attorneys fees (being a real dumb ass I was involved in several cases at the same time so owed quite a bit) And in turn I agreed that under no circumstances would I attempt to sue or publicly/privately slander or libel them. <<

Then you SETTLED for $1000.00, probably on the best adice of your retained counsel. This is of course, assuming a certain amount of guilt on your behalf, otherwise I am compelled to ask why you didn't hold out for more, especially if you were innocent. Guilt doesn't really even matter to your attorney, his job is to get you the most favorable outcome possible on your behalf.

>The DA told my lawyer flat out "I don't take orders from _____" and continued to try and prosecute me for a misdemeanor I obviously did not commit<<

This changes the scenario..SLIGHTLY. If you were charged with a misdemeanor, and a "complainant" was involved, it would actually make the "complainant" a "victim" as far as the law is concerned. So your "crime" was against
a person as opposed to a property or disobedience....this adds another equation. The courts do nt like "personal" crimes and sometimes the plea looks more attractive (cheaper, easier, etc.) than rolling the dice.

> and even if I did I would have got a $500 fine, woopty woo. Some DA's have their heads firmly inserted in ass. Again I can tell you from experience that in a criminal case you will most not likely be compensated for losses from defending yourself.<<

Maybe in federal court this has been your experience. You have experience in state courts across the land as well? Each state has and upholds it's own laws as it sees fit, with the federal government demonstrating a strong reluctance to overturn state decisions or get involved with such.

"Not so. It's called the freedom o information act and the feds are not absolved, unless a gag order was issued."

>This is a very misunderstood act.<<

You're telling me. Agreed.

>The information is public but not all must be disclosed.<<

Depends on your definition of "disclosed". The law is not in the habit or business of informing the public concerning it;'s information. But the info is there for the taking for those who want it.
>Check the FBI web site. They have a few documents online. You will see how much information is "Blacked Out" On top of this it is much like "free air and water" at a gas station or "free credit report" it is legal to charge a fee for the information even though the government has mandated we be aloud to have access to it and access for free. <<

I call that a con game, nothing more.
Sure, there are many services out there that will "do the research and legwork" for a fee...nevertheless, the info. is there for the taking, if one exerts the energy and takes advantage of the resources.

>So no it is not free in all cases.<<

Never said it was, just said it does not cost money to get this info we speak of.

>And many courts have gotten very liberal in what they consider a "fair" fee for obtaining the information for you.<<
Yea, this is akin to the "filing" fees and "copy" fees imposed by some courthouses. However, if you do it yourself, there continues to be no fee, unless of of course, you need to use their copier. A simple phone call yields a "nay" or "yay", such as in the case of our TX friend's claims. so if you count the cost of a phone call, yes, I suppose technically THAT would be considered an expense. Looking at it from that angle, nothing in life is free.

Yes I know that they are seperate, that's why I put the "/" between
them. You sure are digging to find something wrong with what I say. I
mentioned civil as an example of a type of court case. I never said that
these were civil cases. <

>Kevin, Welcome to rec.radio.cb another extension of actual cb radio, <<

See, this is the epitome of where the BS starts...people like you have
their head so far up their ass they feel this is an extension of
reality.

>they will attempt to put words in your mouth, they will attempt to
scrutinize your post looking for one word you left out, they accuse
people of being others , <<

Yea, Frank started it all with his accusation of me being some Roger guy
from WV
that apparently beats Frank on a regular basis no matter how many
identities he tries with.

>LOL just like on the radio as a matter of crack, they will tell your an
asshole for posting the rules, <<

This has never happened in the several years I have been here...just
chumps like you SAYING it takes place.

>yet they will try and tell people about usenet rules when they are
Federal Law Breakers and admittidly so. <<

You''re too choosy in what you believe. If we say we break the law, you
choose to believe it and put it forward as it fits your agenda, if it
doesn't, you attack it, truth regardless.

>You need to take this attitude. "I learned both of these by twisty and
it basically sums up his whole outlook. <<

See, you are learning as we go.

>"just because you say it doesnt make it so" and the other is I think he
got this one from watching the WWF, "It doesn't matter what you think".
<<

Pay more attention or maybe try to
r-e-t-a-i-n what you read. I don't watch TV, at all, except for a show
or 3 on HBO, which aren't on right now. For the pleasure of

repeats....watching your obediency while you're in full drag serves well.

>If you use these 2 key elements with what they say your experiance here will be much more fruitful.<<

It will if he doesn't succeed in letting you drag him down to your sublevel.

>Every one of these clowns had to hire a lawyer to defend him in court. That's where the "financial hurt" begins. Even if the guys don't hire attorneys there are court costs.
All I can say that MANY (sadly) were hams. <<

Why is that ALL you can say? Why can't you elaborate, after all you mentioned 27 pops resulting in fines, did you not?

>I said nothing about fines. Again you are twisting my words and putting new ones in there. I can't elaborate because YES it is against the law for me to give any information about the trial/pending trial until it is finished. Remember, these are FEDERAL cases.<<

>>LOL, Kevin what did I tell you, twisting words and putting new ones in to fit.<<

And it was acknowledged as much. Talk about semantics. And that's all you can attack after all this time! A mere personal interpretation of mine that was incorrect....wow, does your palm feel hairy, yet? Another failure...go join the sorry ranks of defeated malcontents..

>These are FEDERAL, F-E-D-E-R-A-L as I have stated many times. I brought of "civil" as an example of a type of court case. I never said that any of these cases were heard in civil court. There may or may not be civil proceedings as a result but the portion dealing with violations of FCC rules is FEDERAL. In every case in which I have been involved I have been instructed by the court not to discuss proceedings and/or evidence until the proceedings are completed. You are quite welcome to make whatever inquiries as you see fit. These cases are being held at the Fifth Circuit Court in San Antonio, Houston and Dallas. Be prepared to shell out some bucks, they aren't just going to give you the documentation.
Can you produce any evidence, let alone prove, that I am lying in what I said? No, you pick on simantics and twist what I have said to make it look like I am lying. This is why they call it CHILDREN'S BAND and maybe why you are called "twisted."
Kevin, WB5RUE <<

LOL, Kev I see you too have discovered our friend Twitsy.<<

The only thing you see is the remote and improbable possible opportunity of you gaining an ally in Kevin merely because he and I are having a difference of opinion. Somehow, I don;t think the image you have created

for yourself can be disbursed with or by anything you attempt, no matter how desperate or pathetic.

>Remember the 2 sayings when dealing with him.
Guys like you Aaron, Sparky, Leland etc threaten the keyclowns,<<

Well, there you have it, folks. I certainly would never place Muenzler in the category of those hairballs to hammie radio, but you see how desperate they are to recruit someone,,,,ANYONE..(chuckle)...so quick to expand on the kennel club....so, Kevin, are these the type you wish to be associated with? Tell us now, 'cause these guys can sure make it happen.

>they feel it is unfair for you to tell them they are breaking the Law, <<

Another BS lie. Never been said in all the years I have been present here, just clods like you saying it takes place. What DOES take place is folks taking issue with the redundant stutters you girls cant seem to say only once.

>they should know it happens, you can't be first but you can surely be next one of this groups Illegal amp sellers got popped about 2 years ago. ExportsRUs ring a bell?<<

A mere coincidence..you're impotent, and recruiting Muenzler to join your little clique of impotent malcontents will do nothing except serve my whim whenever I choose. So how about it, Kevin? Are these the type hammies you are so proud to be associated with? Would it be out of sorts to send a file of the AKC's posts from the last year and a half to this ARRL you play cop with and then show you endorsing these tactics? After all, that is the tried and tru technique exclusive to the AKC...they have emailed cbers employers, posted the name and addys of where they work..I believe in returning things to their rightful owners. How about it Kev? You an AKCer?

Source record: 128257

>Sure there is Tim, what you do is Illegal and against law, you consider breaking Federal Law a hobby?If not stay on the regular 40 and use type accepted CB radios, why is
that a problem your still using your radio right. <<

Same with your constant change of email names...if you aren;'t using them to get around killfiles or hiding, why is that a problem, right?

>Thats where the difference lies Tim. Hams are responsible for there actions, unlike <<

Sure they are....you won;t even take responsibilty for what you say, let alone anything else.

>Freeloaders who thumb there nose at the Law. <<

Not at the law, only to people like you (chuckle)!

>So please don't try to compare Illegal Cbing to amatuer radio.<<

We don't...it's certain cretin hammies like not unlike yourself that continue to bring it up and post their calls,,,except you of course....remember...responsibility.....except for you! LOL!

>Tim, do you have a drivers license? Why do you have one you? certainly you can drive and have fun like those licensed drivers. In your own words what we do (illlegal drivers) there is not a big difference compared to a licensed driver.<<

Huge difference...one you merely can't comprehend. One has the probable potential to kill or injure others, and frequently hurts innocent lives...the other concept you fail to make a fair analogy with is quite benign by comparison.

2351. Re: Sweep tubes to ceramic

Newsgroup: rec.radio.cb
Date: 2002-06-24 16:43:35 UTC
From: Skipp <skipp@pilotNOSPAMPLEASE.ucdavis.edu>
Message-ID: <af7i7ndbp1@woodrow.ucdavis.edu>
Source record: 128256
Cross-posted to: rec.radio.cb,rec.radio.amateur.homebrew,rec.radio.swap

: In rec.radio.swap Uncle Peter <radioconnectionNO@cox.netspam> wrote:
: Where did I say TETRODE??? I said there are better CERAMIC tubes.
: A specific example would be a 3CX800 or 3CX1500, either will
: beat the 4XC250 3rd order IMD specs by several dB. (-36 and -38 dB
: respectively.)

Your trying to go off topic... stick with the original subject of using
4cx250b.

: Where did I say the 4CX250 didn't meet FCC specs for IMD?

Make this up as you go along Peetie'..?

: I'd be interested in a reference to the FCC regulations specifing
: transmitter IMD perfermence requirements that you referenced. If they
: exist, then there are a lot of vintage sweep tube amps
: still in use that are far worse than the 4CX250 in terms of poor IMD
: performance.

Both types of tubes will easily meet FCC requirements in properly designed
circuits. Anything with a FCC ID number on it should have met the defined
requirements set at the time of production...

: Sure, 4CX250s may be cheap, but the problems and added costs involved
: with the bias supplies, screen-regulation and protection circuits, and
: even finding good quality shielded-screen bypass sockets, sure make a good
: case for using more modern components. My choice would be a 4CX350--if
: I was constrained to whatever ceramic tetrode was most handy and in
: quantity in my tube bins.

One of the original people on the thread had a free batch of 4cx250b type
tubes. It is not a problem to constuct simple supplies to meet the tubes
operational requirements. The 4cx350 is similar to the 4cx250b, just a
larger Anode.

Now you wander all over the place without supplying any supporting
information that you've measured, which would back your original IMD
statement. We were talking about converting an original sweep tube layout
to use some NOS 4cx250b tubes when you piped in with your IMD blanket
statement crap, which reads like you've spent five minutes in some vintage
handbook with dated information.

: For reference:
: http://www.svetlana.com/docs/TechBulletins/technoteNo42.html
: Pete

A lot of the Svetlana tech bulletins have mistakes and flaws. One such example of a major short comming is mentioned in my Dentron GLA 1000 text http://sonic.ucdavis.edu

How about some data you've measured Peetie' stop quoting books and tech articles.

We'll be waiting
skipp

Source record: 128259

>>Nope, not once did I use the word "busts" Go back and read it again.<<

Granted, and I conceded as much. Maybe you can harp on it a few more times for good measure since it is all you can take issue with from my posts.

>>Maybe you did. I suppose if you arrange the letters in such a way you can spell "busts" somewhere in what I said. Yes they are being hit in their wallet. Who do you think imposes fines? You SEEM to know so much about court proceding and our judicial system. <<

Slightly.

>>You can come up with the answer yourself, maybe.<<

I already did. It came from you and it's called "embellishment."

>>Nowhere did I say that there was or wasn't any "prosecutorial" involved. If they are found guilty they pay fines or appeal (more money). If they are found not guilty they still pay court costs and attorney's fees unless they found someone to do it pro-bono for them which is not likely. <<

Not so, dude. You are showing your knowledge to be less and less of these concerns. "Not guilty" are not assessed costs..they are even usually entitled to due compensation.

>>I don't think I said "busted" anywhere in that post. I never took personal credit for making any arrests<<

Hmm...we'll file the word "arrests" along with your entrance of the word "civil", no?

>>Nowhere did I say fines either. I could file suit against you for whatever reason I can think of, "you're ugly and your Mamma dresses you funny" is a good enough reason. Not that it would go anywhere, this state has laws against frivolous lawsuits so it would cost me more than it would you, but you would have to hire an attorney to answer the suit or charges.<<

Not so. Here's some free legal advice that lawyers do not want you to know. Show up at court, ask the court's disposition in the matter, especially if you filed to have the suit/charges dismissed. The court will tell you where they stand. If you don't agree, tell the court you need to retain counsel, THEN you get a lawyer, not before. It can save thousands.

>>Yep, may "save thousands" but when the case is not dismissed (rarely are they) you will still need to hire an attorney and pay court costs.<<

Doesn't even need go that far.....if you agree with the dispositional plea, you don't need a lawyer at all.If the prosecution is asking for a sentence that doesn;t seem unreasonable to me, I would not hire a lawyer. Funny how the analogy always goes back to speeding. If I was speeding and was caught and the court asked for a fine I considered not unreasonable or out of my reach, I certainly would not add to the element of expense by the hiring of a lawyer.I would judge each case by it's merit and law, not emotions and personal feelings.

>>There is no way to get through one of these without it costing thousands unless you can get the case dismissed before it begins. This just doesn't happen.
That's exactly how any criminal/civil charge works.<<

Separate courts, having nothing to do with each other.

>>Never said that they did, did I?<<

No, but you did mention civil court and are now having a devil of a time in explaining it away.

>>What I meant is that the procedings are similar in each. You are charged, you answer the charges, the case is dismissed or goes foreward, the case is tried (differently in each court), the case is resolved and you go on. <<

Why stop there? Traffic court, child support court, etc.., all US courts operate in this manner.....you mentioning civil court, and still dwelling on it, still has nothing to do with anything at hand.

>>Every one of these clowns had to hire a lawyer to defend him in court. That's where the "financial hurt" begins. Even if the guys don't hire attorneys there are court costs. <<

>>There are still costs no matter what the ruling. <<

Lunch at the greasy spoon where y'all stare at the waitresses ass and dream, gas split between the other hammies and you, who are all willing to come forward and testify (should you be asked) so that justice is done, yea, that green can certainly add up.

>>All I can say that MANY (sadly) were hams. <<

Why is that ALL you can say? Why can't you elaborate, after all you mentioned 27 pops resulting in fines, did you not?

>>I said nothing about fines. Again you are twisting my words and putting
new ones in there. I can't elaborate because YES it is against the law for me to give any information about the trial/pending trial until it is finished. Remember, these are FEDERAL cases. <<

Ok, so these are now federal cases. As long as you understand that your mentioning of civil court has no place, now.

>>Civil was given as an example of a type of court.<<

Y3ea, I understand that now, but WHY? Why did you feel the need to give examples of other type courts when they clearly are not similar except relation by jurisprudence?

>>There are federal civil cases but they are extremely rare. For instance if I want to sue the government for libel or slander it is a FEDERAL civil case. <<

It usually can't be done anymore.

>>But here's the catch, the government has to give you permission to sue it.It's amazing what happens to some people when they get their Extra Class license. It's like they get stupid or something. <<

Some do, but it's not limited to extras...they volunteer for what they feel is a position of radio cop that entitles them to think their opinions are held in higher esteem than the general public and that they are (chuckle) somehow more integrity-laden than the general public. Nothing could be further from the truth. Going by the FCC action ratios alone, hammies would appear to be one of the most criminal-minded collective groups on the planet if we were to refer to all radio violators as "criminals" as some hypocritical-assed hammies do to cbers for freebanding or using an amp or having a peaked radio, or even talking of such items.

>>They think that the FCC isn't going to mess with them because they have
"topped out" in their license. It's a BIG eye opener for them!<<

Sure it is......how 'bout this concern..... you have a reg on a freq. for years who has always been slightly illegal. One day he pisses off someone like you and you do what you can with the ARRL/FCC/CIA or whoever the hell else you want to play spy vs. spy with, and he's left wondering what the hell just happened. We have to put up with crooked cops and there are channels and repercussions for those scenarios...but people like you can abuse the piss out of a system like that and the worst that can happen to you in the situation I just described is maybe an uncouth reaction from a neanderthal .....such as an ass whooppin'!When the wrong rock is overturned, (and it wil be)and maybe if the guy screams loud enough and has half a nut for a brain he can get you "deactivated" as a volunteer...but you may be in the process of "doing it to yourself" now.....what I am waiting for, is for that one case, and rest assured, it will come, where you and your boys f***-up bigtime and it comes back to bite you in the ass...with a CIVIL case, no less....think the FCC or this ARRL hammie group is gonna fork over the bucks to represent you? Think you are above being sued? You are in a very precarious situation in today's litigation-happy society......all for the betterment of radio though, eh? I WOULD have believed that, if hadn't you insulted and alienated all who were not

hammies in the world by claiming a license automatically makes one more integritized than the rest of society.

>>There are almost as many Extra Class hams busted as the rest combined! SAD! It was me and 14 other FCC Official Observers who work the San Antonio/South Texas area.<<

Oh, man. This gets better by the day. You sure you don't want to reword that last sentence, 'cause I can say for absolute certainty that as of right now there are only 54 active "field agents" in the country, and you are claiming 14 of them in Texas? And that YOU worked with them to bust hammies/cbers? Don't think so.
But wait a second, you didn;t say "field agents',
you claimed they were "Official FCC observers".....who coined that term, and what exactly is it?

>>Did I say "field agents?" Nope, no need to reword that last statement. Several years ago the FCC, at the urging of the ARRL (American Radio Relay League) instituted the Official Observer program. <<<

Yes, they did, NOT the FCC.

>>Yes they did...with the full consent and
cooperation of the FCC.<<

Of course, of course.....just so we are clear...the FCC did NOT institute, design, nor come up with this program. They merely curtailed to the whines of a few at the top of the heap and people like you go on repeating what they were told. If they cared so much, enforcement wouldn't even be an issue.

>>These licensed hams having at least an Advanced Class license go through training in the FCC rules and regulations as well as other legal training are certified by the FCC and the ARRL. We have no enforcement powers only "observation powers." <<

Ahh, the root of the matter suddenly comes into play...we all know what another certification or plaque or ribbon or patch does to certain-type hammies. Suddenly, the enforcement issue is no longer bathed in bright light.

>>But our word is given the same weight as an "FCC agent" when it comes to notifications of violations or court witnesses. <<

Not even close.

>>Check out the ARRL web page <<

No thank you.

>>Why not? Afraid you'll be proven wrong? Talk about a closed minded fool! <<

So now that you have reduced yourself to calling names, you can go ahead and try to convince the world that even though you were apparently angry

enough to hurl an insult during what is otherwise a very interesting disagreement, that someone of your nature would never, ever go so far as to get angry and have it affect their volunteering of policing the airwaves.

>>http://www.arrl.org and search for "Official Observer"
here's a few.
http://www.arrl.org/news/stories/1999/04/08/3/
http://www.arrl.org/FandES/field/org/oo.html
http://www.arrl.org/news/stories/2001/03/28/1/ Even better, go to the FCC web site at http://www.fcc.gov and do your search. Maybe you'll learn something. Once we track the person down using direction finding equipment,
using Audio recording and such we turn all of the information over to the ARRL who turns if over the FCC.<<

Way too many flaws in this..to begin with, you can be lying through your wazoo of what FREQUENCY the tapes were made on..the feds have to catch you themselves.

>>It's quite simple. Say you are the person causing interference. EVERY transmitter has a particular "key up" or "phase in" signature that can be recorded. With the advent of digital storage scopes (fancy oscilloscope) it is much easier. When you key your transmitter it isn't exacly on frequency instantly. There is a very small fraction of a second when it is "locking" onto the transmit frequency. That can be measured and displayed. If necessary that's how we can say that YOUR transmitter is causing the interference. Frequency is noted an logged and not "recored on tape." The audio is recorded on tape or digitally. Nope, the "feds" don't have to catch you themselves. It is true that the final determination and arrest must be done by a federal marshall but he doesn't have to be the one to collect the evidence. Again, go to the FCC or ARRL web sites and read it yourself. Maybe you'll learn something.<<

An offical representative or thereof of the FCC must witness the violation.

>>Nope, wrong again. Check out the web pages at the ARRL and FCC. Yes I can be "lying through my teeth" <<

Of course you can, which makes me correct in the above statement, not wrong.

>>You are arguing simantics again. Sure, I *CAN* be lying through my teeth <<

Which is all I suggested, nothing more, nothing less.

>>but why risk a civil lawsuit and/or criminal charges of tampering with evidence, manufacturing evidence, purgury....etc. Why risk it? <<

But if a radio acquaintance who you know is "casually" breaking the law and you turn him in for pissing you off, you risk nothing, except from

the"friend" you turned in.

>>but why risk it.<<

Dunno why all those hammies geting popped are always risking their license doing malicious jamming of repeaters or of anter hammies station or even worse, business....and you're biggest cry about cbers are amps and freebanding.

>>It's because they are foolish and/or stupid enough to think that they won't get caught. Evidence produced in court is gone through with a very fine toothed comb, it MUST be constant and accurate or the case is jeopardized.
It's called purgery, fraud, manufacturing evidence and a dozen or so other terms that carry unpleasant consequences. <<

Damn sure don't deter jhammies though, eh?

>>It's different.<<

Always is when the shoe is on the other foot.

>>Those "jhammies" aren't being scrutinized in
court.
Besides it would cause me to lose my license, fines, jail time and civil lawsuits. <<

Not in the sceanrio I just described. You can abuse the hell out of the piss-poor system they designed and no one would be the wiser.

>>Hams who volunteer for these positions generally have a bit more integrity than you give me credit. <<

You sell yourself short. I gave you the benefit of the doubt until you got a bit carried away.

>>Did I really, please elaborate.<<

Yes, you did, really.
Insults, vague off-topics (civil court), embellishments, just for a start.

>Once they've been through the training they are trusted a bit more than the average person.<<

That you even put forth this belief speaks for itself. Even if the feds receive complaints from the ARRL, which may or may not trigger an investigation based on 2 main critierias..safety and number of complaints, no way will they be made to appear in a court room without at least several months gone by and several attempts at contact by the feds which go ignored.

>>I forgot you know everything, that's why you refuse to visit the ARRL
<<

What's the matter? Finding out that you're losing ground and a tad upset about it?
I don;t give a damn what the ARRL says, I know what the criteria is for FCC prosecution and it takes a bit more than what you are putting forth while remaining intentionally vague on all that you are not certain of.

>>and FCC web sites to verify what I say......NOT!<<

The ARRL and FCC websites verify these 27 that were busted?I dunno about the ARRL website, but the FCC site damn sure would have them listed..IF it happened.

>>The ARRL and FCC are very closely coordinated in this effort<<

More happy horsepucky.

>>So that's what you've been smoking! <<

Not in many years. Don;t smoke, don't drink.....185 pounds of sex appeal and twisted freakin' steel.
The FCC simply tolerates the noise made by hammies such as yourself concerning your willingness to play space cop.

>Ditto to what I just said. Visit the FCC and ARRL and learn something.<<

I know what the FCC did, Kevin, we just see it differently. You see it as the second coming, I see it as pacifying a noisy, whining crowd the feds would rather not even deal with.
and only the most flagrant and repetitive violators are pursued.

>>I send out 5 or 10 notices of possible violations each month to hams. If you'd like to see one send me your snail mail address in personal mail and I'll send you a blank one.<<

Post it here as I am sure many would like to see your introductory letter of warning concerning radio behavior you attempt to police.

>>An example of the FSD-213 "Official Observer Advisory Notice can be found at http://www.rac.ca/obsbad.htm
The FSD-15 "Good Operator Report" can be found at http://www.rac.ca/obsgood.htm
If you need a "real" copy I'll scan them in and put them on a web page.<<

I'll find them. Thanks.

>>Most notices that I send are due to improper identification (not at least every 10 minutes). <<

You have GOT to be kidding.

>>Yep, that's the most common violation, improper identification. It's the rules, at least every 10 minutes.<<

I usually don't even bother with this type thing, but I have to ask, out of all the things that are rules or laws, do you really and actually believe
this is a detriment? Obviously you do to take it to such far extents, but are there no better things you can devote your time to bettering? Lost kids, abused kids, big brother program...hell, become a big brother and elmer a kid, help him get his license..take him fishing, take a vacation and I'll take you both fishing.
But that would require you to associate with a know free-bander. Could your psyche handle it? A few from here couldn't.

>>Next most common is out of band, followed by poor signal quality. <<

Tsk, tsk,,,those CRIMINALS.

>>There are other criteria such as signal quality, language, out-of-band,
etc. Yes it does take time for the FCC to actually act, if they do at all. Another thing, we're not "all bad." Part of our duty is to notify hams that are showing good operating practices as well. I send out 20 or 30 of those a month. Yes all of this is at my own expense, I'm a volunteer so I don't get paid.<<

Well, if you send out some warm fuzzies, that makes your other actions self-tolerable. Doesn't it?
I personally take issue with the "duty" aspect. As you profess, you are a volunteer, indicating you have a choice. Equating "duty" with the status of volunteer radio cop merely lends an artificial face to what actually is taking place. I do comprehend certain type people need powertrips and that the word of choice and preference (duty) for justifying such bizarre behavior certainly camoflauges with efficiency the sadness and desperation of those that identify with such.

>>Yeah, you "personally take issue." Just showing your thin skin. <<

So when another expresses an opinion differing from your point of view or something you may take issue with, it's "thin skin."
Interesting.

>>There
are people who take issue with those who violate the rules too. You are showing a general lack of character and integrity by this paragraph.<<

Having my integrity measured by one such as yourself is truly frightening......if you think yourself accurate or as having a clue.

>>The FCC does not have the manpower to "police" the CB and HAM radio bands so it enlists<<

Bullshit! Here you go again. The FCC has not put out a call for volunteers...they merely signed off on it (the ARRL designed program) so the people above you who co-ordinate you will leave them alone.

>>volunteers to do some of the footwork. It's not a power trip or anything like that. <<

That's exactly what it is with those such as yourself. You have demnstrated it several times with your absurd comments, such as placing your honesty level above the rest of the world merely because you have a hammie radio license....

>>There are hundreds of amateur radio official observers who take pride in their ham radio service and want to keep it clean. We are not bullies throwing our weight around. We are here to remind ham radio operators of the rules when they are violating them. <<

And cbers. Don't forget the cbers.

>Since I became an official observer for the ARRL and FCC I have sent out 860 "Official Observer Advisory Notices" and have received back 10 angry replies and 140 thank you notices. Most hams want to be notified when they are violating the rules and don't take it as a personal attack, like some people. What do I do when I get an angry reply? The same thing I do when I get a thank-you,I put it in the file with all the rest. I don't reply back, I just file it.
The FCC has basically thrown its hands up at the CB radio service and look what happened, chaos. With the help of official observers that will not happen in ham radio. <<

It already happened. If you meant that your efforts will slow the degradation of the hammie radio freqs...well,,,,that's another debate altogether.

>>The ARRL provides all of the paper and I provide the postage to send it out.
We turned over information to about 35 people since December and there are 27 that I know of that are either on their way to court,<<

Keep digging.

>>Whatever. Keep reading.
in court or have been through court. Yes, it's very expensive for them even if the are found "not guilty." <<

How so? Not guilty verdicts usually enable one to seek compensation for everything they were put through.

>>What country do you live in? Not in the United States and certainly not
in federal court. Unless it's a frivolous suit is the defendant going to receive any help or compensation when he's found not guilty. The defendant may file a lawsuit for damages but since this is "the government" making the charges....it ain't gonna happen. The Official Observers are specifically protected under the law from lawsuits by the defendant. <<

Oh, so there is a loophole absolving you from civil suits? Superceding, disregarding, bypassing and ignoring Congress, the FCC are on record stating you are exempt from lawsuits of all types concerning your activities?

>>No I'm not going to give you names, that's illegal. <<

No, it's not at all illegal to give their names, but seeing how you already claimed they were busted and fined, that in and of itself can possibly lead to legal trouble if you name names if what you claim never actually took place. In lieu of that, I can see why you would be reluctant to say anymore.

>>Go for it. Make the phone calls, write the requests, publish the names.
I'm surely not going to take the time or money to do it. If it will satisfy your warped curiosity then go for it. <<

Why is my curiosity "warped" for taking an interest in something you claimed? If you wanted no interest in the matter, you never should have posted it.

>>In FEDERAL court it is illegal to divulge ANY information about defendants or court proceedings without the express permission of the court. <<

Not so. It's called the freedom o information act and the feds are not absolved, unless a gag order was issued.

>>Maybe that's what you call a *request* by the court not to discuss the case outside of the courtroom, "gag order." <<

No, I call a gag order a gag order. A request means nothing. Kinda like "Now, let's not leak this to the press."

>>Yes it's only a request because the judge knows that he won't have to make it an order.<<

He will if he has any intention of it not being discussed.

>>It's called integrity. Go look the word up in your dictionary, obviously you are completely unfamiliar with the meaning or concept. Kevin, WB5RUE<<

No, it's called a directive and is issued by a judge or magistrate. It is not the same thing as a gag order. You are completely unfamiliar with the concept or the court system's internal workings. Obviously. And your need to insult is becoming more common-place. I have noted it in the past and I'll note it again now,,,I find it ironic the amount of hammies that have such problems communicating effectively.

From: w5lz@icok.net ('Doc)
>Oris,
        The NG's are the 'front lines' for recruiting
new hams? Really? I can't believe you really mean that. I also have a
hard time believing that any comparison between ham/CB newsgroups would
show either coming out ahead on anything, good, bad, or just plain
stupid. I can see where either type newsgroup would give a 'black eye'
to which ever group they represent.
        I think if you took a poll of amateur radio
operators you would find that the vast majority wouldn't want the 11
meter band back. Who needs it? <<

Agreed. They just wanna hang with us.

>>And as far as 'handles' being legal call signs, oh man, can you
imagine the problems with that? How many people use the same 'handle'?
Good grief, what a mess (LOL)!

>No I prefer fish, but I find Florida Gulf Coast seafood lacking.<<

Naturally. Your unrefined palate is responsible for your non-surprising preference. Before one can appreciate fine cooking, one must first be familair with it.
Next time try going out to eat instead of cooking it yourself.

>Whenever I am in the Tampa area, the locals complain endlessly about the poor quality of the local seafood. The better restaurants import it from Canada. Go figure.
-Aaron- <<

Yea! Especially when Canada is one of our hugest exporters of scallops, shrimp, amberjack and sponge.......the Canadians are breaking their poor necks to get here. You don't have a clue about anything you set forth. If you knew anything at all about Tampa Bay OR seafood, you would know several things you obviously don't,,,such as,,..the biggest and best selling fish in Tampa Bay can't be found anywhere near Canada..besides,,the locals you talked to are all northern yankee tourists...from Canada..they're pissed off 'cause we finally made them start paying for a portion of their medical care.... Of course the other possible scenario, and more probable, is you indeed did talk to locals and they did the right thing,,immediately noting you were a yankee by your accent, you were pegged and given the exact same advice most clueless yankees are given..one to the tourist seafood smorgasboards.
  You've been had, played like a fiddle, but don't feel bad and try not to take it personal, it happens everyday to clueless yankees.

>>I don't at all, highway patrolmen or not.<<

Talk about semantics....you accuse me of playing semantics and turn right around and lay one on me...smacks of hypocrisy, Kev! I wasn't talking of YOU speeding per se, it was a figure of speech,,,anyone speeding,,,one who speeds,,a person who speeds...but I feel your point is lost and now all out of "speed", otherwise, you wouldn't have retreated so quickly to something you found pointless only a day ago.

>>That's what it means to live with integrity, <<

To YOU! You have no business imposing your version of integrity, or anything else for that matter, on anyone at any time. You are not the law, despite your most valiant attempts.

>>you obey the laws whether someone is looking or not. <<

Bullshit. I will selectively disregard any law/rule I do not agree with..always have, always will.
If I speed, I do so knowing full well the highways are patrolled for such lawbreaking, knowing they "are" looking for speeders. If I get caught, I will not send them on a high speed chase after my ass.,..I take my ticket and IF I feel it valid, pay the piper. If not, there is a procedure established to follow.

>You are right, "philosophy this ain't" but it does show a general lack of integrity and character if you violate laws/rules when someone isn't looking and follow them only if there is a reasonable chance of getting caught.<<

And people like you will always be there to enforce truth, justice, and the American way as you see fit, as long as you do it from the shadows where there is never a threat of the possibility of confrontation with these "lawbreaking" heathens.

>>I'm not in any way saying that ALL CBers lack integrity. I know a great
number for whom I would give my life because I know that they would do the same for me. It's too bad that a small, very vocal, minority have to screw it up for everyone. <<

As opposed to large segments and vocal groups that fight among themselves in the world of hammie radio and screw it up for all hammies and ther businesses as well.

>>Yes, hammie radio is plagued with this.
Yes there are bad apples in both communities but in general ham radio

operators operate by the rules when someone is looking and when no one is looking.
It's called integrity.<<

It;'s called more embellishment bullshit, as you have no way of knowing this whatsoever. It is your personal opinion, not an "in general" accepted knowledge of fact.

>>I wouldn't say that ham radio is plagued with problems <<

Then you're not spending enough time on the air.

>>but they do exist. There are four "CB shops," not counting the truck stops, in the San Antonio, TX area. I can go into any of these and buy illegal equipment. There are two ham radio shops in San Antonio, neither of which sell illegal equipment.<<

Sure, but you won't do anything about these "lawbreakers" that would require an actual personal interaction on your behalf. I know the type well.

>>It's why 11-meters has been given the two names "Children's band" and "Chicken band."
Kevin, WB5RUE<<

Only by ignoramuses, intentional or not.

>>"Ignoramus" means someone who acts out of ignorance. Those who call CB chicken band and children's band are not speaking out of ignorance.
Kevin, WB5RUE<<

My bad. I should never assume one is speaking out of ignorance (as in, "Not knowing") when sheer stupidity is at play.

Tin' fo' good buddy!

>and good riddance to bad rubbish. At least, SOMETHING is being done.
For the
bad boys of ham radio that some shout and point to in here, I'm glad to
see the en-
forcement activities.<

Which is how many of us feel. Cber or hammie. Put into perspective,
which hammie do you feel
was pointed to and shouted at unfairly? I have never witnessed any undue
"pointing and shouting" at hammies for anything in here...
Now let's see it from another view.....have you ever seen any hammies
here shouting and pointing at cbers?

The only "pointing and shouting" I see are arguments about the illegal
stuff.
Most of the bad language has come from anon. posters who get mad at
Voobner, et al.

>I'd rather be a part of a radio service that has strict regulation
than any lawless one.<

Many folks need that structure in their lives, many need told what to
do, when to do it, how to do it, etc.,,,,and this is not a good/bad

black/white situation, just another way. But it is hammies screaming the most in here about things that don't affect them and things they have no control over. Constant worrying about something one has no control over...hmmmm!

The only thing I have any control over is 10 meters (yeah, right!) to the extend
that if I hear an illegal station, I'll go looking for it along with my also-indignant
friends.

Also, I don;t know of any lawless radio services...you holding out on me?

The only "lawless" radio service is, not the regular 40 channel CB whose operators
stay within the regs, but the ones who choose to usurp frequencies not their own, but
asigned to government and military agencies as well as some civilian uses. Of course,
we "know" nobody uses them, so it's OK, right? (wink wink).

>RH is still working on those hard-asses that think their sh**
don't stink. The unlicensed services are next..... The 10
meter intruders
are already finding out that it doesn't pay. Er,uh, like the Florida guy.
J<

The Florida guy has a walk in the park compared to the Densa hammie that was popped for threatening cops. Which do you think had the higher IQ, the one messing with the hammies or the one messing with the cops?

Neither one. You can't regulate "stupid", and if you wanna fly in the faces of law
enforcement or bow up, they'll usually un-bow you pretty darn quick. I have NO
respect for hams who defy the regulations; again, good riddance to bad rubbish.
They ought to know better. Rabbit Ears should've taken a hint, but I swear, TW,
many people, particularly 11 meter ops on and off the radio, just don't think any-
thing can or will happen. Inspite of what Aaron says, I have no control over what
people do between about 26.700 and 29.995, so I don't really get *too* involved
in that. I DO take high offense at the people who are in 10-12 meters because that
is MY pasture by virtue of permission, and they don't have an invitation (license) to

the party. So they are "party crashers" that need to be ejected, and I'll do my best
to see that they find the door--legally, of course, by reporting their activities to the
proper agency. If I stop along the road at a truck stop and see "10 meter radios" that
are on Riley's hit list, THAT gets reported, too. Those that wish to obtain the invitation
to the HF party and do so lawfully, I welcome and will do my best to help the new-comer feel at home and to enjoy his new hobby.

I had a long thread in a trucking newsgroup, and, of course, I was flamed and had every
point I made about why CBers should not be in the ham bands picked apart. If I had
slapped one particular guy's face with the enforcement reports, he still would not believe
it. He challenged me to bring ONE instance where a trucker was warned or nailed for
operating on 10-12 meters; I cited 6 (at least). He whined about FCC violating his
"rights"; radio operators of all services HAVE no rights WRT radio--they have PRIVI-
LEGES granted by the government. He argued that FCC could NOT search his home,
nor seize equipment: yes, you can refuse, but you will only be cited and fined even more
for it He argued that CB was "de-regulated"; no, only the requirement for having a paper license was dropped. I then quoted the section of Part 95 where it states that
"by operating your CB station, you agree to abide by all the regulations and that failure to do so voids your authority to do so". No matter how straight I explained the reasons
for NOT crossing the 10 meter line, he held the position that (in effect), the big bad truckers had "rights" to operate where they want to, the hams ought to "give up part of
meters" to them, and the feds couldn't find them anyhow because they would be 1000
miles away tomorrow, etc., etc.

Like I said, Stupid can't be regulated.

> without conduit?What are the code issues?I need to run about 30 ft. to
> the breakers.Info appreciated.thanks

There is some stuff called BX that is essentially flexible conduit. It is tricky to work with and at the very least I would suggest some research like the Time/Life series at the local library before you get too gung-ho. Codes vary but generally conduit is required only where the wire is exposed to keep madame housewife from hanging the laundry on it and conduit hangers are needed in case she uses it for closet space. NYC requires BX to keep the rats from chewing and starting fires so your local conditions might cause your local code to differ from the basic ones.

If by jacketed cable you mean the 240 Volt equivalent of the Romex-style that your outlets are done in, the only diff is that where 120 is done with two leads and a ground, 240 is done with three and a ground. I would suggest #10 wire which while stiff is good for 30 amps. Use a proper outlet so there are no hidden surprises or beartraps for friends, relatives, and successive owners. Do not use a bigger outlet than wiring or someone will plug a range or arc welder into it. More research.

Take the time and study to do it somewhere close to right and don't get cheap about it. Safety demands both some sacrifice and a head screwed on right. Visits to the library and a tour thru a good home supply store would be a good place to begin and do it on paper first to keep the surprises to a gentle ladylike belch. It is also generally cheaper that way.

MN102,
There are a number of different types of cable that you
can use, depending on your local codes. The key word there
is ~local~ codes. You might check with your city's codes
department, they can surely tell you what's required.

>about power rating, and non existent amplifiers......

FYI, there was no "piss and moan" in my post at all. My point was that the antenna might be working correctly despite the rattle, but the problem might be a bad amp -- i.e, the amp is working as a doubler. This is a fault that can happen if there is too much feedback internally, or sometimes even externally. And that happens with "two-pill" amps more often than you might think. If that is the problem, you will get some emission on the fundamental which might lead you to believe that everything is working correctly; but there will also be a significant signal on the harmonic, which would account for a high SWR into a tuned load but 1.1:1 into a dummy load. It's real easy to check the install with a known-good antenna, and that's what he -didn't- do.

And whether or not he is running an amp, simply replacing the suspect component with a good component (the antenna) will determine if that component is good or bad. Again, he -didn't- do this.

Now instead of pissing and moaning about my posts try shutting your trap. Maybe you will learn something.

The advice offered here is good, but please start by talking to the building code folks in your local city to determine what is legal, and hence, safe. Don't want to burn the house down.

You know, I have to bring this up.....

IF

-you "dxeleven"
and
-you need 220 VAC in your shack
and
-no legal CB requires anything near 220VAC

THEN

-you're probably running an amp
and
-amps are illegal on CB

SO

-If you're already breaking Federal Law, why be concerned with obeying
the electrical code?

-Aaron-

I wouldn't do that in a non-binaries group, but what the heck, I'll email ya a WAV file and you can share it with your troll buddy Nebo.

PS: What's the deal with the SOPRANOS? No more episodes? I anticipated that AJ was going to join his dad's outfit. Also I figured Carmela was going to leave Tony. And it looks like Paulie, despite his loyalty, might be open to a change.

Nice gear but not what I asked for.

The company RF Power Systems are based in Pheonix, Arizona and produces
a line of amplifier input and output transformers.

Thanks

LOL, so your saying by changing email address is against the Law. Please oh great Twisty, cut it out my sides are hurtin you are comparing changing email addresses and breaking Federal Law as one in the same. LOL bwaasahahahahaha

Ok, lets examine your question, why do I change email addresses, because I can twitsie, who or what am i hiding from? certainly
none of you low lifes all you need to do is look at the header and you know where it comes from so your assinine exucuse of hiding is no different than you hiding behind the Twistedhed Moniker. As far as killfiles we saw how you guys manage them LOL no one and I mean not one of you low lifes who said you were killfiling someone has ever meant it . LOl They still reply to the person supposedly in there killfile. So twitsy why is it a problem I don't know you had better ask yourself that one. I don't get all bent out of shape that you prefer to remain anonymous why is that a problem, nor do I really care who you are

> >Thats where the difference lies Tim. Hams are responsible for there
> actions, unlike <<

They were sorry how do you know twitsy being a hypocrite again trying to
talk for everone else again, sorry snapperhead what you say doesnt matter
especially if you are trying to talk for other... Why can't they have fun on
CB while they still have there license twit?
They can also turn there license in, never thought of that did you stupid
and you only have to id every 10 minutes or at the end of your conversation.

Well, Skippy, I posted links and some figures based on manufacturer's
data from their websites and from their databooks. I also stand by my
posts, which you continually misquote. Read what I posted and try to
comprehend. You're obviously trolling, since you have offered absolutely
nothing which refutes what I originally said "they are better **ceramic**
tubes than 4CX250s [for IMD performance] for amplifier use." You asked
for figures and data, other than from "obsolete radio amateur handbooks",
and then you continue to argue that the data taken from the manufacturers'
own
websites is flawed, based on your opinions.

I suggest that YOU trying to provide some concrete facts, based on concrete
technical that has been published. And sorry, not all external anode
tetrodes
have the same IMD performance despite the "size of their anodes". I'm
still waiting for you to quote the FCC regulations that specify transmitter
IMD
performance, which I suposedly alluded to.

CB used to be a "no requirement" licensed service. That didn't work either, it still degenerated into a sewer pit of radio spectrum.

I supplied data for several ceramic tubes. You have a fixation on tetrode
4CX250s. Read my original post.

>We were talking about converting an original sweep tube layout
> to use some NOS 4cx250b tubes when you piped in with your IMD blanket
> statement crap, which reads like you've spent five minutes in some vintage
> handbook with dated information.

Yes, of course your right. Any sweep tube amplifier is a natural for
conversion
to external anode tetrode amplifier tubes. Small matter of pressurizing the
chassis
and meeting the plate, bias and screen voltage requirements. Skipp can
make a
4CX250 amp with as good 3rd and 5th order IMD performance as any of the
3CXxxx tubes, 'cause it says so on his webpage.

> > A lot of the Svetlana tech bulletins have mistakes and flaws. One such

You mean "coming"?

Now, that's good. Quote your own webpages as being the technical bible.

> How about some data you've measured Peetie' stop quoting books and tech
> articles.
>

Supplied that, but you claim published data from the manufacturers is
flawed.
Where is your DATA, and specify what sort of test equipement was used, and
by what standards the IMD levels were referenced to? (i.e. Collins, ARRL)
You can defend your data, this is my last post to the troll.

As a Ham for 10 years and a CBer for many more I have seen both sides of the VE debate. I took my test from Industry Canada and was put in a glass room by my self. No books, no notes only some blank paper, a cheep calculator, a pence and the test. I walked out about 1/2 hr later and was told to go back in and check it. I told the examiner that I did and to mark it. I sat in the room wondering how I did. A few minutes later he came back in the room and shook my hand. If I remember correctly I scored in the low 90s. Many of the local hams thought I had fouled some how because I did it on my own with no help, just the books and some quiet time at home after dinner.

On the other hand I have a friend that wanted a ham license and had a bunch of money. He bought every scanner and short wave that the candy store could bring in. The same store that he took his test from. He was permitted to take in all of the books and notes and was permitted to talk about the test with others in the room taking the test. All of whom were big spenders at the same store. The store knew that he was a big spender and they gave him every chance to pass so that he would be in laying down the big bucks in the future. I call that buying a license. His test was an open book test and mine was a closed book test. Did the VEs do anything wrong or did they just pass a blind eye on the infractions of the testing protocols for future profit? I thought this might be a one time thing until one field-day when the conversation came up about testing and many people in the discussion said that they got their license from the same place the same way by spending a lot of money in the store before taking the test.

I guess that it works both ways but the government inspectors / examiners can lose there jobs but the VEs just loose the right to test and maybe a small fine.

Exactly JJ, They heard ham radio was so great so they decided to take the test and get a license. Then they found out you have to obey the rules or your ass was gonna be handed to Riley Holingsworth. (genuflect). So there.

your troll buddy Nebo.
PS: What's the deal with the SOPRANOS? No more episodes? I anticipated
that AJ was going to join his dad's outfit. Also I figured Carmela was
going to leave Tony. And it looks like Paulie, despite his loyalty,
might be open to a change.
-A <<

A long story, but that email hasn;'t worked properly since
my local company messed things up...try twistedhed@hotmail.com.
I dunno about AJ, haven't really made up my mind. Carmella just HAS to
stick around, and I think you are right about Paulie, which would mean
someone else has to made a Capo, eh? What about those scenes in the
woods with the Russian...pretty funny.
I promise to give your WAVfile an honest opinion.

Open up the Old Amp wax museum you run out there in the toolies, Jay. Ten-Tec is bringing out the Argonaut V in August. A thunderous 20 watts, AM, FM, SSB, and CW. Most T-T rigs are near-absolutely unconvertable to 11 and feature full break-in (QSK) CW as well. Find an old amp in your collection to run with this beast, especially the QSK.

The original Argo was a sweet little rig that had a 100 watt broadband linear that T-T had to quit making because of the CB amp rules back in the 70s. A lot of us hated to see that little jewel go.

Kind of looking forward to seeing the thing. In fact, I am ready to do some parts scrounging to get ready for the dead of the cycle. Ain't had the gonies tickled like this since the exhaust note on a 100-4 Austin Healy.

Skipp, suggestions??

Dick N&#65533;BK, aka the Velvet Codpiece. Tell no little lies.

>LOL, so your saying by changing email address is against the Law. <<

Not at all, what I am saying is good for the goose......

>Please oh great Twisty, cut it out my sides are hurtin <<

Constipation.

>you are comparing changing email addresses and breaking Federal Law as one in the same. LOL bwaasahahahahaha <<

Nope, just your flawed reasoning was what I illustrated.

>Ok, lets examine your question, why do I change email addresses, because I can twitsie,<<

Cool, that answer is sufficient for any of us, regardless of the question.

>who or what am i hiding from? <<

I don't think you;re so much hiding as you are homebound. It still is mighty peculiar.

>certainly none of you low lifes all you need to do is look at the header and you know where it comes from so your assinine exucuse of hiding is no different than you hiding behind the Twistedhed Moniker.<<

Ahh, grasshopper speak, but does grasshopper hear what he say?

> As far as killfiles we saw how you guys manage them LOL no one and I mean not one of you low lifes who said you were killfiling someone has ever meant it .<<

LOL! I dont need a killfile. I have a controllable will to reply or pass on a post. I like to see it all.

> LOl They still reply to the person supposedly in there killfile. So twitsy why is it a problem I don't know you had better ask yourself that one.<<

I did, that's all it was, a question. You're the one calling it a "problem." There are no problems, only solutons.

> I don't get all bent out of shape that you prefer to remain anonymous why is that a problem, <<

Again, it's really not a problem. I don't care who you refer to yourself as from day to day. Again, it was just a question.

>nor do I really care who you are
Thats where the difference lies Tim. <<

My name ain't "Tim."
It's Theodosieus.
But you may continue to call me anything you like if it gets you through the thread on time.

>Hams are responsible for there
actions, unlike <<

Sure they are....you won;t even take responsibilty for what you say, let alone anything else.

>I won't, why do you say that twits? when havent I twistednuts is something I said bothering you? <<

Haha, no dude, seriously, it's all good.

>Nonetheless I was talking about on the air activites you are talking about a NG 2 different animals but you knew that twit thats how you got yor name you try to twist everything.
Freeloaders who thumb there nose at the Law. <<

Not at the law, only to people like you (chuckle)!
>Please Explain, If you operate Illegaly you are doing it because of me? <<

Here is how I see it. If the feds contacted me concerning transmitting on my cb, legal or illegal, I'd stop. Hell, if a neighbor asked me to stop, I would, at least until I found what the problem was.
That is NOT thumbing a nose, and the feds see it the same way, which is why they contact you in the first place.
Now when your type gets in here and smarts off about this type thing and that type thing being illegal, over and over, of course you will be disrespected.......in return.

>So please don't try to compare Illegal Cbing to amatuer radio.<<

We don't...

>Who is we twithed, <<

All the cbers I have ever seen post in this ng.
As you "conveniently" lopped off my post, it's the hammies continually bringing up hammie stuff in here, not the cbers, hence "we", as I am not a hammie at this time.

>Tim happened to compare the 2 are you now speaking for him and saying thats not what he meant? <<

Maybe it's the interpretation that's flawed.

it's certain cretin hammies like not unlike yourself that
continue to bring it up and post their calls,,,except you of course....remember...responsibility.....except for you! LOL!

>What about my call Capt Twithed, this is not a ham group why does one need to post there call? <<

As far as I'm concerned, unmoderated means just that.

>What about you why don't you post with your real name? Remember Responsibility... LOL<<

It's a cb group. I figure a cb handle is suffice. You just got done saying you don;t give a damn who I am then ask why I don't post with my name. S'cool, though.

Hello mn102:

Good deal, you didn't really give us a lot to go on here.

I had to install heavier wiring to, but only had to run in a few feet, not 30 feet.

The problem I first ran into was which Circuit Breakers could I use for the new 220 service???? I didn't have a electric Dryer, so I disconnected the wires for this, and used new 6 gauge wires just into the next room for a 220 Volt, 40 Amp Service Outlet. I was lucky, it was very simply.

But for any type of run, and you may want to consider that you only want to do this once, justifies using only the good stuff. Using oversized wire for those long winter nights, will require that you verify that the Circuit Breaker type will accept it. And you want the new wiring installed per code, no body wants to burn down the house.

Its a real possibility that a Licensed Electrician can install the hole thing in a short period of time, per code, and maybe you can run the wiring or what ever to save him some hard labor, and you a few dollars.

Jay in the Mojave

The only "pointing and shouting" I see are arguments about the illegal
stuff. Most of the bad language has come from anon. posters who get mad
at Voobner, et al. <<

George in your kilfile?

>LOL, You idolize me don't you you negro. <<

Haha! Now THAT was funny, and I DID laugh out loud.

>how is the trailer you live in doing?<<

I don;t consider weekending in the camper "living in it', but to each
their own. It's doing quite well, thank you. Just packed the bearings
recently and installed new dustcaps. Matter of fact, it's going to be
"lived in" for quite some time this summer. It could use a better A/C
though, something at least 15,000 BTU.
The converter can handle up to 10 amps continuous draw. I do pretty
decent with an antron in a tree.

>requirements set at the time of production...

The FCC has no test requirements for IMD, or standards, in amateur
service. they do not ask for that data in type-acceptance, and care
less about it at that end.

The only requirement is on the USER to be sure his station meets "good
engineering practices" signal quality. You are not allowed to have
any modulation products extending outside the authorized frequency
limits for your class of license of for that mode, and you are not
allowed to cause interference on adjacent channels.

Factually, nearly all radios being sold today do NOT meet FCC
standards if we consider "good engineering practices". For example,
the TS2000 is a pathetic -30 to -25 dB or so below PEP for third order
on 160-meters. Other radiaos are similar, look at reviews. Remember
also the ARRL uses dB below PEP, and NOT the industry standard dB
below one tone. The published data by them is six dB better than the
standards used by commercial people.

An old Collins KWM-2 I have is almost 30dB BETTER for IM3 than a
modern TS-2000.

With all that in mind, 4CX250's are generally better than some modern
rigs and worse than others when properly run, with well-regulated
voltages on the grids. Without regulated voltages, they are trash.

>One of the original people on the thread had a free batch of 4cx250b type
>tubes. It is not a problem to constuct simple supplies to meet the tubes
>operational requirements. The 4cx350 is similar to the 4cx250b, just a

But a good screen supply is required, and protection and metering
circuitry for the screen is an absolute requirement.

>Now you wander all over the place without supplying any supporting
>information that you've measured, which would back your original IMD
>statement. We were talking about converting an original sweep tube layout
>to use some NOS 4cx250b tubes when you piped in with your IMD blanket

>
>: For reference:
>: http://www.svetlana.com/docs/TechBulletins/technoteNo42.html
>: Pete
>
>A lot of the Svetlana tech bulletins have mistakes and flaws. One such
>example of a major short comming is mentioned in my Dentron GLA 1000 text
>http://sonic.ucdavis.edu

Amen. Sevetlana's main goal was selling tetrodes even if it meant
stretching the truth with creative marketing.

If you need an example of this, look at measured IM performance of
PA's using their tetrodes in well-designed PA's like ten-Tec and ETO.

Despite Svetlana's jabbering about how tetrodes don't need good screen
regulation and are clean clean clean, they fail to meet those claims
when compared to simple cheap triode PA's.

NEVER depend on marketing oriented literature for reliable technical
facts.

73,

Tom

> without conduit?What are the code issues?I need to run about 30 ft. to
> the breakers.Info appreciated.thanks

TOP TEN excuses for why he needs 220 VAC in his CB/11 meter shack.

10- Wife put washer/dryer in radio room
9- Want 12 V DC power supply for Kraco to have "headroom"
8- Big wiring looks cool
7- Professor told me to do it
6- Need to do arc welding while CBing
5- If 110 VAC is good then 220 VAC must be better
4- Sorry I thought this was rec.radio.amateur.contesting
3- 220 VAC isn't illegal!
2- Just enjoy reading the electrical code
1- Need Henry 5K on standby just in case CB rules change

-A

I sincerely doubt you could teach anything, And again DIPSHIT, he stated absolutely NOTHING about running an amp! IF I were in the market for any type of learning process here would not be a first choice, and YOU aren't even on the list.......

Its also pretty obvious your main intent to even be on this newsgroup is to ATTEMPT to cause problems, SO don't even bother replying, you've just been added to the kill filter.....

Oh no no no. You don't understand. We DON'T want them to feed the meters. We don't want them here AT ALL. There is no parking in all of Sac thanks to stupid tourists. What in the heck is there to see in Sac that makes it worth it to vacation here? Well, ok, so it's not tourists but I still hate trying to park my work truck. I'd really hate to be a trucker in this area...

2434. Re: For Jay

Newsgroup: rec.radio.cb
Date: 2002-06-25 00:38:56 UTC
From: Jay in the Mojave <jay123a@qnet.com>
Message-ID: <3D17BBA0.3A7FE9FF@qnet.com>
Source record: 128340

Hello Dick:

I am sure Skipp is a hole lot smarter than me one this stuff.

I would think that you have two ways here to go. Make your own, or a Pride DX-300, or buy a new or used one, with the QSK installed.

I would go with a single 4CX250 type amplifier. The Pride DX-300 was a single tube that used the 4CX250 type of tubes, and it would do 80, 40, 20, and 10 meters. But they are rare, and when ya do find one, there are proud of them price wise. But they don't have the QSK function. Be advised.

But the input circuit should be easy to fiddle with, not over driving the tube, (Class AB1), and even under driving it so you could use a 1500 watt amp that only needs say 60 to 80 watts to drive. Maybe not, 100 to 200 watts on CW is great. I know there are military surplus amps out there that use a pair of the 4CX250's, but ya got to look around.

Not being a CW fan, or having a lot of experience with CW, I only have a faint idea how the QSK would work, a fast relay, or pin diode switching?

I have seen the amps using a single 3CX800 that have the QSK function in them, but then again, the owners are proud of them. 20 watts in to get you close to 400 watts out, and have the amp and tube last a million years. But the good thing is that it could be sold at a fair market value, anytime you want. And it may even be cheaper in the long run, not running all over the place, and getting stuff from surplus stores and such, unless you in a huff about making it your self.

But you would be required by rrcb rules to share a photo and schematic diagram of the new low power device. Your profile, the good side, with a Bird Model 43 with the 250 or 500 watt slug, ... with the neddle pinned all the way over to the stop, a TV in the background going blank, and you should probably have a big hat 2.

Maybe Skipp can help out more here.

2437. Re: For Jay

Newsgroup: rec.radio.cb
Date: 2002-06-25 01:15:20 UTC
From: Richard McCollum <rmccollOMA@worldnet.att.net>
Message-ID: <IuPR8.59428$UT.4069844@bgtnsc05-news.ops.worldnet.att.net>
Source record: 128343

For a few milliseconds I did consider whomping up some 4cx or 3cx whatever but that's old beans; been there done that, bought the sweatshirt, own the trophy. I got FETs on the brain either as modules or freeform and it gets me into areas where no man I know has travelled. Even bipolar which probably is more sensible is old beans and somehow the thought of having someone ask me how many 'pills' it has gives me gas. And coming up with 60 volts or so gives me a chance to build a switcher without owning a copper mine.

In my layout something on the order of 100-200 out is plenty and a lot less masochistic than 20. I do not contest and do not hang on 75 meters. And I can stay out of things with 200 now and see no reason to press my luck for no good reason; I am an apartment dweller after all. And it needn't go above 15meters because I think 20 watts is perfectly adequate for 10 or 12 meters.

Ten-tec receivers are world-class. Where most times you can't work what you can't copy it is being a bit silly to hear things you do not have a prayer of working. That's what I mean about masochism. The QSK is there because it is in the transceiver and I do dittybop. While QSK capability is rare these days although not as rare as it once was it just seems a shame to lose it.

If you get pix, the odds are my incredibly handsome visage will not be in them as I do not wish to close out still another category. :-)

Where did you arrive at that from my post? I said "not round these parts",
your not diggin a 30 ft trench by hand in 30 minutes or less in my area
shale is one tough customer,
unless your only going a few inches deep but who would with a 220 line

So your saying If I change my email address, then it is ok for you to break
Federal Laws?

> >Please oh great Twisty, cut it out my sides are hurtin <<
>
>
> Constipation.

No I am pretty regular I eat lots of veggies, oatmeal, wheat breads etc.
Thanks for your diagnosis

> >you are comparing changing email addresses and breaking Federal Law as
> one in the same. LOL bwaasahahahahaha <<

> Nope, just your flawed reasoning was what I illustrated.

No you illustrated that you tried to compare the 2,

> >Ok, lets examine your question, why do I change email addresses,
> because I can twitsie,<<

> Cool, that answer is sufficient for any of us, regardless of the
> question.

ok

> >who or what am i hiding from? <<

> I don't think you;re so much hiding as you are homebound. It still is
> mighty peculiar.

Homebound? LOL yes it is considering I am out of my home 10-12 hours
everyday.
Go figure, another speculation gone bad on your part I guess. Remember Just
because .. oh you know the rest.

> >certainly none of you low lifes all you need to do is look at the
> header and you know where it comes from so your assinine exucuse of
> hiding is no different than you hiding behind the Twistedhed Moniker.<<

> Ahh, grasshopper speak, but does grasshopper hear what he say?

Oh yeah, wax on wax off , snatch the pebble from my hand.

> > As far as killfiles we saw how you guys manage them LOL no one and I
> mean not one of you low lifes who said you were killfiling someone has
> ever meant it .<<

> LOL! I dont need a killfile. I have a controllable will to reply or pass
> on a post. I like to see it all.

Then why did you ask about me and my names If you weren't interested in
killfiles?
I have killfiled 2 people in this group, just to prove a point. Never once
have I replied to them while they were kilfiled ..
It started to get boring so I took randy out.

> > LOl They still reply to the person supposedly in there killfile. So
> twitsy why is it a problem I don't know you had better ask yourself that

Dave, they did have some op's who didn't get along at all. I remember one ham/phd who looked down his nose at everyone. Yes, he was intelligent but he beat everyone over the head with it.
As for Aaron's questions, "How will you know it's me?" and "Why won't you post a callsign?"....Aaron, face it. You are a social outcast, a loser, a loner, a complete human failure. Just accept it!
And if you can manage to get a ride all the way to Springfield, I will showup, count on it. As far as hiding behind a keyboard, you only project that thought to reassure yourself that you won't have to face someone you have insulted/inflamed, that maybe that guy is as chicken shit as you are. Not! Put up or shut up. Show up!
You afraid of something???? Yes, you are!
Well, enough of responding to your idiocy. Up yours Aaron, or whoever you really are since you wont tell anyone your real name/info but continue to ask for ours.....Dumbass!

Perhaps you missed two little clues: the word "if" and the question
mark at the end. That kinda indicates that the post was a question,

not an argument; and therefore has no premises nor conclusions.

Regardless, it's still a good question: If someone is violating federal laws, why would they bother to comply with local electrical codes?

Message-ID: <RERR8.143103$nZ3.61702@rwcrnsc53>
Source record: 128399

Where are you going to and from? What is the terrain? What type of panel do you have? How much current you looking to provide? Where are you located? Exactly what outlet do you need? Sub panel? questions questions...

I'm an un-educated boob...meaning I've been doing electrical work since I was 15 (of course under the table and they only let me trim at that age) and I love doing it. If I could provide even the slightest bit of help I'd be walking around the house with a giant grin for weeks, then again I am very easily amused.

Assuming you plan to bury it in a trench at least 18" deep here's a few thoughts:
UF cable is rated for burial, basically same as Romex but just better insulation
Sealtight is rated for burial, but still a type of conduit
PVC is rated for burial, conduit obviously
IRC or GRC (Rigid metallic conduit) is rated for burial, obviously conduit and can be a pain in the ass.
Can't think of any other burial rated cables other than UF off the top of my head, but if you are burying it just run conduit. If it's worth doing twice, it's worth doing right the first time

If you don't plan to bury it and the panel is in such a way you can mount conduit to the exterior or interior wall then I do not recommend you use any type of cable. It is not safe and not technically legal according to the NFPA's NEC 2002 or even earlier codes for that matter. Mount conduit (see stupid quote above)

BX was mentioned some where down the thread: Most places don't call it BX anymore they call it MC. It is basically a roll of flexible conduit pre loaded with the wires you want. If you are running 220V to your shack then I would recommend a 10/3 MC. This will have two hots a neutral and a ground and be good for thirty amps.

If you could give some details or even pics I'd love to give you my input. Better yet I'd do the freaking work for free (read: you buy the beer) if you were near my area.

Hey jack ass, he just might. On a single phase panel if he has two circuits in his shack (from different phases obviously) then he does. Question is , is it enough for his application? Is it run in such a way that he can utilize it? You really are a waste of bandwidth. Until this thread I had nothing against you. You obviously have no clue. I run 220V to my server room. Does this mean I'm doing something Illegal? There are a million reasons to want 220V in his shack and only 10% are illegal. You really are here just to harass aren't you?

Apologies, Dave. I guess I was wrong. It all makes perfect sense to me now. If one has a question about wiring for a server (or any electrical appliance) one should go to a "CB radio newsgroup" for answers. :)

How does the "need" for 220 VAC pertain to CB?

>How many times have regulars on this board posted off topic
>questions?

Where are all these off topic threads? I see nothing about gardening, child care, cooking, television, optometry, cave paintings, music or any of the other millions of possible topics of disscussion. Usually aside from jokes, personal messages and flames, whatever is posted here in some way relates to CB.

>Your logic is still extremely faulty.

Faulty logic is thinking that a guy who rarely posts here suddenly shows up looking for advice on electrical codes, wiring, and home remodeling, and it has nothing whatsoever to do with CB.

Didn't you hear? According to Bert and others, you can talk about
anything on this newsgroup, but it should be limited to anything
related to CB radio. IOW, if you run your CB in a shack, any
discussion about the shack is an appropriate topic on rrcb --
construction, heating, electrical, insulation, etc.

BTW, "Lord of the Flies" sucked. It seemed like a piss-poor attempt to
demonstrate a very pessimistic view of pubescent moral development in
a modern society, while suggesting that the parent-child relationship
in a family is becoming an obsolete concept. I think the point could
have been made without the obvious (almost plagiaristic) parallels to
"Peter Pan".

You see, I can talk about this and not worry about it being off-topic
because I have a CB sitting on top of the book! Get it?

Why are they the "Good Guys"? Because the FCC rarely enforces
freebanding outside the ham bands? Do you now recommend that your
members should violate federal laws only when it doesn't interfere
with hams?

2509. The Pleistocene Age

Newsgroup: rec.radio.cb
Date: 2002-06-25 06:21:37 UTC
From: aaronhvoobner@yahoo.com
Message-ID: <5c35b3ab.0206242221.6970069c@posting.google.com>
Source record: 128415

The Pleistocene is popularly known as the Ice Age. It wasn't the first "ice age;" it was simply the only one that humans lived through. What has this got to do with CB, you might ask? Well, there are millions of possibilities. I might be thinking about The Pleistocene Age while listening to my CB. Or, I might be trying to imagine what it would be like if CB existed in The Pleistocene Age. Or perhaps the fact that the ionosphere existed during The Pleistocene Age is enough to relate the entire epoch to CB radio. No matter.

Let's get right to it. The Pleistocene might be thought of as a series of Ice Ages, with glaciations lasting many thousands of years separated by interglacial periods lasting thousands of years. So recent was the Ice Age, some scientists have asked if it's really over or if we're just living in interglacial period. However, the recent concern about global warming has convinced many skeptics that the Ice Age is behind us!

During glaciations, vast continental glaciers covered much of northern North America and Eurasia, with ice towering as high as 13,000 feet. With so much water locked up in the form of ice, sea level dropped to about 430 feet below current levels. 430 is an awful lot of feet. Imagine if you had a CB antenna that tall!

When sea level was lowered, North America and Eurasia were connected by the Bering "land bridge." Plants and animals had migrated between the two continents even before the Pleistocene, when humans first crossed into North America. Great herds of long-horned bison thrived on Pleistocene grasslands on both continents, preyed on by lions on both continents. Woolly mammoths roamed across much of Eurasia and North America, ranging south into what is now Nebraska. Coincidentally, all wooly mammoths in Florida died horrible deaths due to the poor quality of the local seafood.

However, if you could travel back in time 15,000 years or 100,000 years, you'd probably be amazed at how similar many Ice Age animals were to modern animals. That's because many Ice Age animals still exist. Just about every modern plant or animal you can think of was alive during the Ice Age, including humans. The crops that grow on the lush grasslands of the Midwest are nurtured by rich soils produced by loess, the fine sediments produced when glaciers ground rocks to dust. Those grasslands could certainly be profitable for Moparholic since he cuts lawns for a living. But back to The Pleistocene Age...

The great glaciers destroyed fossils along with rocks. In much of the Midwest, the glaciers destroyed any rocks that might have contained dinosaur fossils, digging down to much older rocks harboring fossils

of ancient marine invertebrates. In parts of the northern Great Lakes states, New England and eastern Canada, the ice dug deeper still, unearthing the granite bedrock of the Canadian (or Laurentian) Shield, which was formed during the Precambrian Period, more than half a billion years ago! Was there CB during the preCambrian period? Who knows? Something to think about.

Anyhow, the most famous Pleistocene fossil sites are found beyond the reach of the continental glaciers. These include California's Rancho la Brea tar pits, which have produced an abundance of well preserved fossils of saber-toothed cats, along with the animals they preyed on. This particular area is not far from the TRW swap meet in LA where CB outlaw Jay In The Mojave buys and sells illegal CB linear amplifiers.

Back to the Ice Age. Fossils of Ice Age animals lie strewn about on or near the surface of the earth around the world. Mummified camels and ground sloths have been found in the American Southwest and South America. Remains of mammoths still bearing hair and flesh have been retrieved from Alaska and Siberia. Just about every county in every state in the United States probably has petrified wood representing trees that grew during the Pleistocene. Many CB'ers use these slabs of wood to sit on while they muse about The Pleistocene Age.

Pleistocene creatures adopted as state symbols include the woolly mammoth (Alaska), the Columbian mammoth (Washington), all mammoths (Nebraska), the saber-toothed cat Smilodon californicus (California) and the beluga whale (Vermont), which still lives today.

2510. Pleistocene Art: A Topic Of Interest To All CB'ers

Newsgroup: rec.radio.cb
Date: 2002-06-25 06:31:29 UTC
From: aaronhvoobner@yahoo.com
Message-ID: <5c35b3ab.0206242231.2a60350a@posting.google.com>
Source record: 128416

Many CB'ers will be interested to know that Pleistocene man used charcoal and ochre as paints for their images or used sharpened tools to scrape outlines of their images directly into the cave walls. Sometimes they would painstakingly grind and carve animal or human shapes out of rock, bone, horn or antlers to make small sculptures.

These artworks have survived to the present day in caves whose entrances were blocked millenia ago and were recently found. Among the most famous of these caves is Lascaux in the south of France, rediscovered in 1940 and recently closed to the public due to damage caused by moisture and bacteria introduced into the cave. There are very few illegal CB'ers in France because most of the citizens have found legal ways to enjoy their leisure time. Its artwork dates to 19,000 years ago. Other caves have been found throughout Europe with artwork dated back as far as 32,000 years. This art depicts animals the people of the time would have hunted and possibly worshipped.

Cosquer Cave - (in French) This cave near Marseille is accessed through an underwater tunnel and has images of penguins native to the Mediterranean Sea during the Ice Ages. Many CB'ers wil be fascinated to know that it has a large number of images dated to two separate periods. The oldest, with only terrestrial animals dates to 27,000 years before present. The newer assemblage with both terrestrial and marine animals dates to 19,000 years ago.

Vallon-Pont-d'Arc - CB'ers will be greatful that this cave was discovered December 25, 1994. It was verified as authentic four days later by Jean Clottes, the Chief Curator of Heritage for the French Ministry of Culture and placed under the protection of the French government. The cave contains over 300 black or red ochre pantings or engravings of bear, mammoth, horse, rhinoceros, lion, stag, ibex, wild ox and other animals. The charcoal and pigments have been dated to between 30,340 and 32,410 years old. That's a lot longer than CB radio has been around, by golly.

2511. Attn CB'ers: Help Me Identify Pleistocene Fossil

Newsgroup: rec.radio.cb
Date: 2002-06-25 06:49:25 UTC
From: aaronhvoobner@yahoo.com
Message-ID: <5c35b3ab.0206242249.3915a4b2@posting.google.com>
Source record: 128417

The other day I was putting in a ground rod for my CB antenna and I unearthed some prehistoric vertebrate fossils, about 200,000-300,000 years old. Realizing I had discovered something special, Ludmilla and I notified the Museum Of Natural History . We told them that I spotted what looked like a bone sticking out of bedrock. It turned out to be a partial forearm bone from a Shasta Ground Sloth (Nothrotheriops shastensis). We later found a jaw bone and teeth of a Western Camel (Camelops hesternus) on this same site. I tam certain that the fossils represent extinct Pleistocene mammals and are rare finds.

My question for the Cb'ers in this group is that the Fossil jaw bone of the extinct Western Camel seems to preserve an erupted deciduous ("baby" tooth) fourth premolar and an erupting first molar. This dental condition indicates that the camel was not an adult individual when it died, but more like a teenager. I wonder if anyone can help me determine their age. Clearly they are from the later half of the Pleistocene Epoch (the so-called "Ice Ages") 700,000 to 10,000 years ago. The geology of the area further suggests that the fossiliferous deposits probably accumulated during an interglacial period. My working hypothesis is that they are probably 200,000 to 300,000 years old, but I'm not sure. Can anyone help?

Interesting -- the ionosphere and the ice age. I wonder if there is
any relavent association. Hmmm... If the ice ages were a result of
weak solar cycles, I don't think 11m skip would have been too good
back then...

I saw a documentary that showed the cycles of glaciation, and if the
program was right then we are still receeding from the last ice age.
Apparently, global temperature changes are fast and large, not in the
gradual increases or decreases that some scientists presume. The
process reminded me of electron energy level transistions, analogous
to the sub-atomic particle physics that makes LED channel-displays
work.

Where I come from, they call this a conflict of interest. This is but
one reason why I never fully support the VE program. As long as people
with questionable integrity, see an opportunity to make a few bucks on
the side, by selling out their principles, then fairness suffers. Common
folk can be corrupted much easier than a government worker, who has no
stake in whether you pass or fail. One of our local ham VE groups was
recently busted for "suspicious" testing practices, and several recent
licensees, tested by this group, were forced to retest.

Hams are supposed to be of the highest integrity. But it seems that many
are not.

At least the FCC, for the most part, is impartial. When I took my test
at the FCC field office, there was no talking. All calculators were
examined by the FCC agent in charge, to make sure there were no answers
stored in memory. You got your test form and a piece of scratch paper.

You passed or failed by your own hand, the same as the rest of the people.

> So don't talk to me about hams being snobs.

Wow! Now there's a blast from the past. Change the name of the clubs,
and the channels used, and you could've been describing CB in the 1970's
in my area as well. Every group had its home channel. That home channel
was their "turf". Anyone that happened on the channel, that wasn't part
of the group, was "encouraged" to leave. There were frequent battles
between groups (Usually over bleedover, or some drunken rampage).
Each group formed due to similar likes or personalities. The teenagers
ran on one or two channels. The "retirees" were on another, the middle
aged housewives and their truck driver husbands hung out on another.
Sidebanders ran on channel 16 and sometimes 17. There was even a group
than claimed channel 22a as their "private" home.

When the CB "boom" was officially on (which was any time after 1975),
many people complained about all the "convoy buddies", who just spun the
dial breaking for radio checks and time checks all day long. Christmas
time was a zoo, when all the kiddies got walkie talkies and CB's, and
the radio and time checks would easily quadruple for a several weeks
afterward.

It seems to be human nature to claim things as our own, and to fight
back when someone from the outside moves in. I've seen it on both CB and
ham radio. When the FCC took away the bottom 2 Mhz from the 220 band,
there were guys, who never even owned a 220 rig, spouting off about it
like they were personally affected. I've witnessed repeater groups
resort to tactics more fitting the CB channels, when their "turf" was
threatened by another repeater group on the same frequency.

The bottom line is that we're all human, and are vulnerable to much of
the same emotional responses to these situations. The truly mature ones
will be able to resist the temptation longer.

Now, now...there's both good and bad on both bands. The majority of enforcement actions occur on the amateur bands due to the ability to identify the offender. Unless the offender's "slimming" someone else's call...he/she's an easy catch. Not so on 11-meters.

If that amp is not working properly then yes. Any piece of electrical equipment can cause both your shack to burn down or your dumb ass to get fried. Just because it is illegal to push weight on the air doesn't mean the equipment used is dangerous. Nice try but your grasping at straws...dumb ass.

Aaron,

I don't care if this guy is running an amp and that's why he needs 220 in his shack. I don't mind off topic posts. His radio shack is a part of his hobby, to me that makes the question of how to get 220V into it a valid one. I'm surprised you don't see off topic threads here Aaron. Maybe your filtering them out or you are of the opinion they are on topic. I don't know. Standing down

That's a shame that the damage resulted from having been exposed to
"present day" (+/- 50 yrs.) moisture and bacteria. I wonder if better
preventative measure could've been taken circa 1940 to head off this
damage. Sorta like the lack of FCC enforcement on the CB. Had CB
licensing not been "abandoned" (Carefully chosen word.) and more
stringent enforcement been applied, say circa 1980, perhaps a great
deal of damage could've been prevented?

An interesting note would be the effect (Or, more accurately, lack thereof.) of the lack of RF exposure on the environment during the period. With the recent suits involving cellular phone cos. wrt cancer alledgedly caused by cellular phones held in close proximity to the head, so many studies are underway...yet still inconclusive. Nice change of pace, Aaron. Take it easy.

Doc, you fail to understand, it's "ALL" of our jobs to track and report terrorists. Not just a specific agency within the government. Hell, is the druggist a human being? So why should he not be able to change a tire? Exactly, "YOU" have to use a lot of common sense when making comments.

As for your last sentence. "WE" all know that Congress will say anything and do anything as long as they don't have to be involved. My respect for the Congress just isn't there.

'Doc wrote:

>So your saying If I change my email address, then it is ok for you to
break Federal Laws? <<

Not at all, what I am saying is WHAT is good for the goose......"

>Please oh great Twisty, cut it out my sides are hurtin <<

Constipation.

>No I am pretty regular I eat lots of veggies, oatmeal, wheat breads
etc. Thanks for your diagnosis<<

I just shot it on out there after you shared the symptoms

>you are comparing changing email addresses and breaking Federal Law as
one in the same. LOL bwaasahahahahaha <<

Nope, just your flawed reasoning was what I illustrated.

>No you illustrated that you tried to compare the 2,
Ok, lets examine your question, why do I change email addresses, because
I can twitsie,<<

Cool, that answer is sufficient for any of us, regardless of the
question.

>ok
who or what am i hiding from? <<

I don't think you;re so much hiding as you are homebound. It still is
mighty peculiar.

>Homebound? LOL yes it is considering I am out of my home 10-12 hours
everyday.<<

For the sake of asking just to ask, where do you go?

> Go figure, another speculation gone bad on your part I guess.
Remember Just because .. oh you know the rest. <<

Yea....I do.

>certainly none of you low lifes all you need to do is look at the header and you know where it comes from so your assinine exucuse of hiding is no different than you hiding behind the Twistedhed Moniker.<<

Ahh, grasshopper speak, but does grasshopper hear what he say?

>Oh yeah, wax on wax off , snatch the pebble from my hand.<<

Echo voices in the night...

>As far as killfiles we saw how you guys manage them LOL no one and I mean not one of you low lifes who said you were killfiling someone has ever meant it .<<

LOL! I dont need a killfile. I have a controllable will to reply or pass on a post. I like to see it all.

>Then why did you ask about me and my names If you weren't interested in killfiles?<<

It wasn't the names I was seeking from you, just what you would offer up as reasoning. It's the "what's good for the goose"...thing.

>I have killfiled 2 people in this group, just to prove a point. Never once have I replied to them while they were kilfiled .. It started to get boring so I took randy out.
LOl They still reply to the person supposedly in there killfile. So twitsy why is it a problem I don't know you had better ask yourself that one.<<

I did, that's all it was, a question. You're the one calling it a "problem." There are no problems, only solutons.

>Well you said it was a problem ... I refresh your mammory
twisty said:

""Same with your constant change of email names...if you aren;'t using them to get around killfiles or hiding, why is that a problem, right?""

>Oh, DAT! NOW SE HERR WHAT I MEANT WAS.............. No really, I meant, "why" is it a problem that you want to know WHY someone wants to know why you change names. Each time you were asked by someone why you change emails so frequently, a frequent reply of yours is "Why do you care?"..which is what I originally referred to..in other words, if you aren't using them to get around killfiles, why should you care why someone else cares?
OR, if you aren't changing emails to only get around killfiles, why does someone asking you WHY, seem to be a problem for you. I just thought If it wasn't a problem you'd answer the question instead of asking it back, but that works, too.

>I don't get all bent out of shape that you prefer to remain anonymous why is that a problem, <<

Again, it's really not a problem. I don't care who you refer to yourself as from day to day. Again, it was just a question.

>I don't know you used the word problem, If it is not really a problem why did you call it as such?<<

See above.

" Same with your constant change of email names...if you aren;'t using them to get around killfiles or hiding, why is that a problem, right?"
nor do I really care who you are
Thats where the difference lies Tim. <<

My name ain't "Tim."
It's Theodosieus.
But you may continue to call me anything you like if it gets you through the thread on time.

>You has better reread, I never called you Tim your mind is wandering back to my original post to Tim,
you had better learn how to cut and paste, your very delusional.<<

Nah...honest mistake. Save it for future reference to laugh at.

>Hams are responsible for there
actions, unlike <<

Sure they are....you won;t even take responsibilty for what you say, let alone anything else.

>I won't, why do you say that twits? when havent I twistednuts is something I said bothering you? <<

Haha, no dude, seriously, it's all good.

>Ok, I thought it was! Just wanted to make sure you werent really mad at me or something.
Nonetheless I was talking about on the air activites you are talking about a NG 2 different animals but you knew that twit thats how you got yor name you try to twist everything.
Freeloaders who thumb there nose at the Law. <<

Not at the law, only to people like you (chuckle)!
>Please Explain, If you operate Illegaly you are doing it because of me? <<

Here is how I see it. If the feds contacted me concerning transmitting on my cb, legal or illegal, I'd stop. Hell, if a neighbor asked me to stop, I would, at least until I found what the problem was. <<

Good Man Thats the right thing to do<<

  That is NOT thumbing a nose, and the feds see it the same way, which is why they contact you in the first place.

>True dat <<

Now when your type gets in here and smarts off about this type thing and that type thing being illegal, over and over, of course you will be

disrespected.......in return.

>Only natural and we expect it! <<

No beef there.

>So please don't try to compare Illegal Cbing to amatuer radio.<<

We don't...

>Ok
Tim happened to compare the 2 are you now speaking for him and saying
thats not what he meant? <<

Maybe it's the interpretation that's flawed.

>Possible but I never held that against your interpretation. <<

Fair enough.

It's a cb group. I figure a cb handle is suffice. You just got done
saying you don;t give a damn who I am then ask why I don't post with my
name. S'cool, though.

>Well i was just following the flow of the thread and this is where we
wound up in replying to your question.
Have a good Night twisty<<

Haha! I did, thanks.

Source record: 128438

Hello VC:

Ok good deal. Tommy one of our local Hams, is retired and lives in a modest house, with all sorts of antennas and such. He asked me to help him with one of his 20 Meter vertical antennas. Looking over the Galvinized Pipe Vertical, that should be on the front of QST Mag, had coax with a date code of 1966 on it. No problem, running in a new coax line, and cleaning out the bugs and spiders from the remote tuning unit fixed the problem.

Tommy's 4 each 813's, HF Band Linear Amplifier bit the dust a few years ago.

He replaced it with a Commander 1250 that has the QSK function in it. This amp uses a single 3CX800, and his old Heath Kit smokes at 50 watts out. He picked the amp up for around a grand, since it had only one 3CX800 tube, all the Hot Rods want the 2 and 3 tube verison. He he he talk about running in a new 240 Volt service, Ten-4.

Here are a few web sites on the Commander HF Linear Amplifiers.

http://www.eham.net/reviews/detail/227

http://www.command1.com/hf-2500.htm

The good thing here is Tommy ain't gettin his beek deep into the goon juice, with his old 813 amp having a open chassie with the high voltage all over.
And the amp will last him a million years. And seems to run quit well on 115VAC. Not bad for around a grand.

Oh, I don't know about that. Twenty watts can work the planet pretty
well. I'm kinda a receiver fan. Without getting too technically
involved, I firmly believe that the receiver is the most important
part of the rig. Sounds like a fine piece of equipment. Take care now.

As was mentioned in some other posts, it is not
normal for that antenna to make that noise. Also as
was stated, try using another antenna and see if the
SWR goes down.
It should be guaranteed, so you can either return it
to where you bought it or back to the manufacture.

Well, 220V can be used for much more than an illegal amp in your shack.

Electric heat
Water heater
Electric Range

The direct bury wire you are looking for is called "UF" cable. Usually grey
in color with a very tuff sheath.

http://www.do-it-yourself-pumps.com/UF-Burial-Wire-for-pump-systems.htm

Shucks, we all know YOU won;t come within a green mile of me.....you'd
still be looking for those Carp or cleaning your soiled self.

>Carp?<<

Yes, your ignorance concerning it is still evident.

> Twisty, you earn the title of "The King Of Nonsequitors" for that
one.<<

Flatlanders wear nothing at night..too hot.

>Thanks but I didn't need to know that.<<

You already knew. It's that one of the reasons you are easily
fascinated.

A more likely scenario is
your import overheating from the A/C running so hard, 'cause you'll have
your windows up and doors locked 'cause of Cooter Mae's finest lineage
and welcoming committee. When the sun rises, I'm usually home within the
hour or two, with the exceptions of weekends when I'm playing heap-big
radio pirate. You know all about that. You drop in frequently on
weekends , call and all, just like clockwork. <g>

>If you are actually using Leland's callsign <<

Where was Lelnad mentioned in this post? :)
"Lelnad" is someone I can assure you no one will ever seek to imitate,
in any fashion.
The innuendo on display in your window pays homage to your multi-faceted
fascinations.

>on unauthorized frequencies on any regular basis, let me know what time
and what frequency. Maybe I'll get lucky and be able to tape it. What do
you care, right?<<

Right.

You're a free spirit, yes?<<

Actually, I'm a Mongoose type of guy. At least I was.

>The FCC won't come after you, correct?<<

Depends what I did. I suppose if I turned it up and wiped out a commercial radio station in all of Oldsmar, say.....one owned by Clear Channel, and say.... I did it every weekend on a specific frequency, to the north end of Tampa Bay and did it over and over and over and over.....you're correct, they won't.
You have maybe another point of view?

>Heck, I bet you'd be proud if I heard it.<<

Heard WHAT? Me? Hell, you've already heard me...you tried to deadkey and was put under the porch by a superbowler from your neck of the woods.....you've been acting out ever since,..it's that rabid temper thing you never learned to control or get over, but let others manipulate. Don't act like you follow the letter of radio law..you don't.

>You got nothing to hide from anyone. <<

Correct.

>So let's give it a whirl....my ears are on! -Aaron-<<

Now get your brain to catch up with your ears and you might be alright.

Sometimes it is asserted that local governments aren't taking advantage of the Local
Enforcement Statute. A few days ago, I was surfing the web looking for something
regarding ham amplifiers, and ran across this by accident. I am not posting it to cause
strife, but just to let people know that a few local authorities are working on laws/ordin-
ances to enforce CB regs. Please treat it as info and not as a flame. It is just that--info
you can use.

Remember when this issue was hashed out 2 years ago on here, we talked about local
legal eagles smelling money? Read the following account of Montana's efforts to "ham"
mer (sorry, it's a pun-I just couldn't resist. <<snicker>>) out a state law to go after the
illegals. I just hope it doesn't cause trouble for innocent people--CBers AND hams.

73

2001 Montana Legislature
About Bill -- Links

HOUSE BILL NO. 242

INTRODUCED BY R. BROWN

A BILL FOR AN ACT ENTITLED: "AN ACT PROHIBITING THE OPERATION OF CITIZENS BAND RADIO EQUIPMENT THAT HAS NOT BEEN AUTHORIZED BY THE FEDERAL COMMUNICATIONS COMMISSION; REVISING THE DEFINITION OF "PUBLIC UTILITY"; PROVIDING FOR ENFORCEMENT BY THE PUBLIC SERVICE COMMISSION; REQUIRING THE COMMISSION TO ADOPT RULES; A PRIVATE RIGHT OF ACTION; AND PROVIDING A PENALTY; PROHIBITING A LOCAL GOVERNMENT FROM ADOPTING LESS STRINGENT STANDARDS; AMENDING SECTION 69-3-101, MCA; AND PROVIDING EFFECTIVE DATES."

WHEREAS, on November 22, 2000, President Clinton signed into law Public Law 106-521; and

WHEREAS, Public Law 106-521 grants to the states and local governments the authority to prohibit the operation of certain high-power citizens band radio equipment that has not been authorized by the Federal Communications Commission; and

WHEREAS, Public Law 106-521 was enacted because the Federal Communications Commission does not have the personnel to enforce its own regulations governing use of high-power citizens band radio equipment that has not been approved by the Commission; and

WHEREAS, the regulation by the state of unauthorized citizens band radio equipment will assist operators of amateur radio services, sometimes called "ham" radio, in that it will reduce the ham radio frequency interference resulting from the operation of the illegal equipment and will also assist consumers by reducing interference with television, cordless telephone, and commercial radio reception; and

WHEREAS, it is appropriate for the Legislature to prohibit the operation of unauthorized citizens band radios, to require the Public Service Commission to enforce the prohibition, and to require the Public Service Commission to adopt rules consistent with Public Law 106-521 and the rules of the Federal Communication Commission to aid in the enforcement of the prohibition AND TO PROVIDE A PRIVATE RIGHT OF ACTION FOR THE ENFORCEMENT OF THE PROHIBITION.

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF MONTANA:

Section 1. Section 69-3-101, MCA, is amended to read:

"69-3-101. Meaning of term "public utility". (1) The term "public utility", within the meaning of this chapter, shall embrace includes every corporation, both public and private, company, individual, association of individuals, and their lessees, trustees, or receivers appointed by any court whatsoever, that now or hereafter in the future may own, operate, or control any plant or equipment, any part of a plant or equipment, or any water right within the state for the production, delivery, or furnishing for or to other persons, firms, associations, or corporations, private or municipal:

(a) heat;

(b) street-railway service;

(c) light;

(d) power in any form or by any agency;

(e) except as provided in chapter 7, water for business, manufacturing, household use, or sewerage sewer service, whether within the limits of municipalities, towns, and villages or elsewhere;

(f) regulated telecommunications service.

(2) The term "public utility" does not include:

(a) privately owned and operated water, sewer, or combination systems that do not serve the public;

(b) county or consolidated city and county water or sewer districts as defined in Title 7, chapter 13, parts 22 and 23; or

(c) a person exempted from regulation as a public utility as provided in 69-3-111; or

(d) citizens band radio equipment regulated by the commission pursuant to [section 2]."

NEW SECTION. Section 1. Regulation of unauthorized citizens band radio equipment -- penalty -- exception -- commission to adopt rules PRIVATE RIGHT OF ACTION. (1) A person may not operate a citizens band radio that has not been authorized by the federal communications commission.

(2) The commission may issue orders and take other acts necessary to prevent the violation of subsection (1).

(3)(2) A person who operates a citizens band radio in violation of subsection (1), the rules of the commission, or an order issued by the commission is subject to a civil penalty of a maximum of $500, to be paid to the commission after an opportunity for a hearing held pursuant to the contested case procedure of the Montana Administrative Procedure Act. The commission may bring a civil action in the county in which an unauthorized radio is located to collect the penalty provided for in this section. A penalty collected by the commission pursuant to this section must be deposited in the general fund COLLECTED AS PROVIDED IN THIS SECTION.

(4)(3) Subsection (1) does not apply to a radio licensed by the federal communications commission pursuant to 47 U.S.C. 301.

(5) The commission shall adopt rules to implement this section. The rules must be compatible with Public Law 106-521 and the regulations of the federal communications commission.

(6) A county, consolidated local government, municipality, or town may not adopt or enforce an ordinance intended to implement Public Law 106-521 that is less stringent than the provisions of this section and the rules of the commission adopted to implement this section.

(4) AN INDIVIDUAL MAY BRING A CIVIL ACTION IN THE DISTRICT COURT OF A COUNTY IN WHICH THE INDIVIDUAL RESIDES TO COLLECT THE CIVIL PENALTY PROVIDED FOR IN THIS SECTION, PREVENT THE OPERATION OR CONTINUED OPERATION OF A CITIZENS BAND RADIO THAT HAS NOT BEEN AUTHORIZED BY THE FEDERAL COMMUNICATIONS COMMISSION, OR BOTH. THE ACTION MAY BE BROUGHT PURSUANT TO THIS SECTION AND TITLE 27, CHAPTER 19, AND THIS SECTION OR PURSUANT TO OTHER APPLICABLE LAW.

(5) PROOF OF OPERATION, OWNERSHIP, OR OTHER CONTROL OVER THE OPERATION OF THE RADIO AND LACK OF AUTHORIZATION BY THE FEDERAL COMMUNICATIONS COMMISSION CONSTITUTE PROOF OF A VIOLATION OF SUBSECTION (1).

(6) AN INDIVIDUAL WHO SUBSTANTIALLY PREVAILS IN AN ACTION BROUGHT PURSUANT TO THIS SECTION MUST BE AWARDED COSTS AND REASONABLE ATTORNEY FEES.

NEW SECTION. Section 2. Codification instruction. [Section 2 1] is intended to be codified as an integral part of Title 69 27, CHAPTER 1, PART 7, and the provisions of Title 69 27, CHAPTER 1, PART 7, apply to [section 2 1].

It's funny you should mention that. I was doing some experiments before I
posted that
to the other group, and I was having trouble finding something on which to
extend the
hats higher above the coil. Everything I had was either bent or just looked
really sucky.
I happened to remember that I had cut off a bunch of whips to different
lengths and saved the bottom "stubs" figuring to remove the ferrules. I put
ferrules on the upper
ends and fastened them down with set screws (the kind you find at hamfests,
etc.) Then
I had exactly what I needed.

According to my experiments and the advice of the fellas on that group, when
you ele-
vate the capacity hat at least 18-24" above the loading coil, it seems to
improve perfor-
mance by about 2 DB.

Very good. Now why should someone bother to obey the law regarding one
piece of potentially hazardous electrical equipment while ignoring the
law regarding another piece of potentially hazardous electrical
equipment? You can understand the question, can't you?

> Just because it is illegal to push weight on the air doesn't mean the

Ok, you -can't- understand the question....

> Nice try but your grasping at straws...dumb
>ass.

Yes indeed, trying to convey a simple concept is sometimes very
difficult when the recipient refuses to think.

Hay Hank,the replacement was the MRF497 but they are as expensive as the other one however they have been using the MRF 455 and you'll have to drill a couple of holes there is a kit for this but I don't have that web site and that isn't really to close of a part for the job I know I've been getting crap from rfparts for some time now you would think after putting them in radios for 15or 20 years you would get the knack of it goodluck!!!!!

11 meters doesn't have near the level of abuse hammie radio
does..

Oh come on twisty, I know your laughing deep down when you said this.

wait..let me rephrase that, hammie radio has much more potential
for serious abuse than does cb.

Thank God, Cb has far exceeded its abuse potential into reality.

Like I said, thank God the feds have
their priorities straight. They know which service is in need of
watching, monitoring and enforcing on a constant level.

Yeah Ok. The only reason they went ham first is,
Riley vowed to clean up his own bands first and they are far easier to
catch,
especially with the Self- Enforcement of ham. Do you think another Cber
would turn
one of his Keyclown brethern in for running a bigger amp than his . Doubt it
twitys.

The only reason the feds don't watch CB any more is cause your local police are. The FCC sayes that they don't have the resources to follow up on over 4 millon transmiters cramed into a 500 KHz section of the band. Ham radio operators are getting watched over cause FCC dosn't want the same problems on the ham bands as there is on the CB band. I say give the CB bandback to the hams and see what happens. I still can't figure this one out Why would the FCC put a radio service on a band that is so loaded with propagation and then put a 150 rule into effect. Make no sense to me! Just like the government.
Oris

Aaron,

I enjoy really reading these technical debates and have always had a fascination with amplifiers of any
type, from audio to LASER.

I just searched my newsgroup provider for the text string 'amplifier' and found no matches.

If there was a rec.radio.amplifier newsgroup I would prefer to be there.

This group seems to be the next most popular for those types of discussions.

If you look at this thread, the majority of the posts have been made by licensed operators who just may
have been drawn here to this newsgroup because their interests are similar to mine.

If a new newsgroup titled rec.radio.amplifier was created, and those folks interested in having amplifier
discussions went there instead of to rec.radio.cb; would it finally satisfy you to the point were you
would......
1) Just leave us alone on that other newsgroup?
2) Stay on rec.radio.cb and continue to act as the 'conscience' of the entire newsgroup?
3) Or would you join us on that amplifier newsgroup and make some on-topic posts that would contribute to
the overall intelligence being shared?

I could embrace any one of the three......

Regards,

Dennis O.

No, putting it on 27 MHz did not make a lot of sense but it happened to be the only place it could be done. The service is technically Land Mobile under the treaty so the 250 km requirement was required by treaty; the FCC had no choice and still does not. While I, too, believe that to err is human, screw-ups require a compooter, but major fiascos need a government program, this was a case where a Communications Commission tried to give communications to people. They did not predict transistors, the 1973 fuel shortage, double nickels, and Convoy (my sister went to school with Bill Fries aka C.W. McCall -- who hated country with a passion but cashed the checks) but I doubt if anyone did in 1956. That an experiment failed is fact but that happens in the Great North Woods.

I vas dere Sharlie.

Oris, you are a good hearted fellow but you are a virtual fountain of half-truths lately. Hams lobbied the FCC for enforcement and finally got it after years of pleading for it. If they'd done nothing, there'd be no enforcement on the ham bands today.

>I say give the CB bandback to
>the hams and see what happens.

The hams don't want CB "back".

>propagation and then put a 150 rule into effect. Makes no
>sense to me!

The reasons have been explained in this NG time and again. The placement of CB on 27 mhz had more to do with the era and its technology limitations than FCC incompetence. The idea was to make short-range radio comms available to average citizens. Thus the equipment for CBRS needed to be inexpensive, easy to use, and available to all. Self-compliance in sharing this resource with other users was assumed. No one foresaw that it would evolve into a lawless wasteland where people did not respect the rights of others.

>Just like the government.

The fact that you feel the goverment makes no sense to you does not give you a right to selectively break laws.

Everything with CB radio is illegal. How much potential do you need?? Abuse? What is your definition of abuse? 14.313, 3.898, 3.901, 3.950, four channels (I use that term to speak in your lingo) out of Thousands of Frequencies (Opps channels). Out of the 40 CB channels from 26.700 to 27.999 (note more than the allotted 40 channels) are abused daily. Twisty get a grip! Open your eyes to the truth.

That's funny, I found matches in...

rec.radio.amateur.equipment
rec.radio.swap
rec.radio.amateur.contesting
rec.radio.amateur.homebrew

Maybe there is something wrong with your browser. Also try e-Hamnet, QRZ.com and the contest reflector. Of course, these are all topics pertaining to LEGAL use of amplifiers. If you seek topics dealing with ILLEGAL operation of amplifiers, try these forums...

Uncle Jims Radio Page
BigRadios.com board
Keydowns.com board
Lowriders CB Board
Davemade board
Noname Amps Board

...etcetera.

>If there was a rec.radio.amplifier newsgroup I would
>prefer to be there.

Fine. But as I have demonstrated, you have plenty of more appropriate choices to share your knowledge of RF amplifiers in than a "CB radio" newsgroup.

>This group seems to be the next most popular for those types of
>discussions.

Check out the list I gave you (above). I think you'll find 100x more amplifier discussions going on in there rather than in here. If quantity and number of amp discussions was your goal, you'd be somewhere other than rrcb.

>If you look at this thread, the majority of the posts have been
>made by licensed operators who just may
>have been drawn here to this newsgroup because
>their interests are similar to mine.

I have no wish to regulate your posting or regulate discussion. I am merely commenting on the fact that a CB newsgroup is being used to discuss equipment that is illegal for use on CB radio.

> If a new newsgroup titled rec.radio.amplifier was created,
>and those folks interested in having amplifier
>discussions went there instead of to rec.radio.cb;
>would it finally satisfy you to the point were you
>would......
>
>1) Just leave us alone on that other newsgroup?
>2) Stay on rec.radio.cb and continue to act as the
>'conscience' of the entire newsgroup?
>3) Or would you join us on that amplifier newsgroup and
>make some on-topic posts that would contribute to the overall
>intelligence being shared?

Regarding #2, I am merely posting my opinions. Do you have a problem with that?

Regarding #3, You need to check out all those forums I gave you that exist to discuss illegal CB. I do not post there, nor do I have a wish to. I believe that answers your question.

Regarding #1, If you found or created an official Usenet newsgroup called "rec.radio.amplifiers" you would inevitably find yourself sharing discussions with licensed amateurs. I'm sure there would be friction when they got wind of keydowns, 20K CB amps, freebanding, and the like.

Possibly, but unlike you, I'm sure some of them can see shades of gray, as has been done on this NG. The world is not as black and white as you would lead us to believe. Don't believe me Aaron? Consider the CIA. One of your "Federal Agencies". Do they not violate the rules? I mean really, what's a little murder or drug deal here and there? You on the other hand, seem to think that keying 4-1/2 watts on 27.415 is the end all of crimes. Not much of anyone shares your views, unless of course you count multiple personalities as beings. God man, you really need to get out. Go play the damn accordion or something.

Randy, I don't think Aaron or myself think that 41/2 watts on 27.415 is a
big deal.
If thats all that was happening the world would be a much nicer place as
well as 11 meters.
There would have been no need for the Bill that was passed allowing Police
to carry out the FCC Rules.
With that being said, do you have any favorite polkas or something like that
perhaps Aaron would take a few requests,
he is rather good from the wav file he sent me he sounds like a regular
squeeze box tottin, polka playin, bitchen guy!

sure 20 watts can do it during a full blown band opening but its not a comfortable qso while the band is shifting or starting to drop and sure as hell not if the guy your talking to is get qrm or qrn. power isnt always needed but its nice to have on hand to maintain good comms as long as possible

Sure. I'd love to hear him do "December" by the group "Collective Soul". Not
a polka, as I really don't care for polkas or Hispanic music that employs
accordions, but it would be interesting if he could give us his rendition.

I must concur with the good doctor here. Randy's response is typical
of your basic lowlife criminal type ah guys. Let's say that the cops
catch them them with crack. Immediately they start complaining that
the cops are being too picky, there are more important crimes than
theirs, the world is not a perfect place, etc. Blame goes to anyone
except themselves.

You know, I played my butt off on that WAV, and only did it because
Twistedhed requested a sample. I sent it to him but apparently he is
unable to recieve mail at the address he posts from. How could that
be? Anyone ever heard of that? Must be his account is in a mess,
or....who knows what that Swamp Rascal is up to.

Oh, this is where this is coming from. LMAO!!! Just because I ("and others") feel that it's not a problem for folks to "discuss" the "illegal aspects of CB radio," you want to illustrate that it's objectionably irrelevant by going to the extreme. Aaron, you made my night. Absolutely too funny!

So if folks talk about, let's say, Palomar, Galaxy, or Cobra CB amps...that would open the door for Mr. Pleistocene man? Cool, I'll go with that. You know why, Aaron? Because if I see a thread that I find objectionable, I ignore it and move on to one that interests me.

Oh yeah, I forgot...there's no such thing as a "CB" amp. Simply the best, man. HBO couldn't write material this amusing.

You fail to understand. A person transmitting on the CB bands at say 50 Watts presents no danger to himself if the equipment he uses is in good working order. You are comparing apples and oranges. Many people Drive over the speed limit. Seems like in my area it is common for people to travel between 10 and 15 MPH over the limit. I would guess less then 1% of these same speeders would rob a liquor store. But according to the logic you have set forth they would. If they speed why would they not also rob?

I was going to post it for the enjoyment of the group, but for some reason
my news reader doesnt like attachments
or maybe it's the server? I like the nice touch where you say twistys name
etc, just to let him know it was made for him .
Hope he likes it, sounds like you went to some trouble to make it, hope he
does get to hear it, hmmm...he may not be able to play it over his
computer/TV
Got any more of you playing? I don't like polkas all that much either but
they go good with the accordion I think.

Thanks for bringing up a common misunderstanding about me. It is not my intention to stop anyone from discussing anything they want to. I couldn't and I wouldn't. Period. I merely comment on what's posted or on what's being discussed. Except for the advertising illegal amplifiers (which is a crime) I respect the right of free speech. So how do people get from that, to "Aaron wants to stop us from talking about (X)"? Let's take a look...

1. Some guy, let's call him FreezingChillNY begins a thread about the joy he takes in his 50 kilowatt CB amplifier.

2. I comment that 50 kilowatt CB amplifiers are illegal.

3. Screwthreadhead's pals invite me to go jump in the lake. They inform me that talking about amplifiers isn't illegal.

4. I rebut that I never said that talking about CB amplifiers is illegal. The use of them is illegal.

5. Some other guy, let's call him Groundfish, tells me there is no way I can prove that FreezingChill is actually using an amplifier so I should shut up and mind my own business.

6. A third guy, let's call him MindBlaster, says I shouldn't be post here at all and that I'm a troll.

7. A fourth guy, let's call him Screwthreadhead, says that no one cares 50 kw amps on CB. He also says that the US Goverment is corrupt, so it's OK to not obey laws.

8. Some unidentified guy says I'd better not post any more or he'll come and kick my **s.

9. Groundfish says he likes the idea of someone kicking my a**.

10. Finally, a guy named Bert (sorry couldn't think of a better name) chides me for trying to control what people post about on the NG.

LOL....Go figure!

OK, I took down my trusty A99 today after about 6 years, and notice that the fiberglass is a little worn on the 2 lower elements. If I pick up the antenna from these elements, man does it hurt. Is there any workaround to fix this? Sand it? wrap tape around it? I'm putting the antenna up at another house, and don't want fiberglass particles to fly off the antenna while it's up on the mast.

That's the problem with Twisty, his technology is a mess. He can't quote text, he can't upload, he can't get mail, he can't download. IMO he should jettison WebTV as it does him no good. The only reason I could think why he might want it is the screen size. He could be half blind and need to see large type. Who knows? I'd like to meet him someday just to see if all the rumors about him are true.

>Got any more of you playing? I don't like polkas

You haven't heard good accordian playing then. When "Beer Barrel Polka" is played properly, it transports you to another dimension. Same with Klezmer music, it is utterly sublime in the hands of a master. I often play at the local tavern (sort of a Roslyn Cafe look-alike) on weekends just for fun and it's either Klezmer or Polka (or the occasional Cajun tune). Sorry, no more WAV's for now, at least till Twisty makes good on his promise to give me his honest opinion on the one I sent him already.

Hey Bert,

I'm gonna claim credit for Aaron's recent OT posting streak. Brings a big grin to my simple face when he stared posting this stuff just cause I think how we set up the space we do are hobbies in is a valid topic for this newgroup. I'm into Jeeps too. If I went on the Jeep newsgroup and said "I need to run 220V to my garage" You know what I'd get? A whole heap of help not accusations. Maybe a "What new toy did you get? Big compressor? Do tell"

I guess what I'm saying is that Aaron fails to understand that from the rig to the shack it is all "on topic" I should have been more specific when I said "If it pertains to CB then it is valid" But on the other hand he has posted a few interesting things. Nice change of pace! hehe

Not even a close comparison, troll boy. Crack is a dangerous drug. 4-1/2
watts never killed anyone. Please try to follow the thread.

I agree it would have been nice if he had let us know this little tid bit.
Come on Aaron the fact remains he asked if we could give him advice on
running 220 to his shack and the radio shack is a part of the hobby...right?

Dave, you don't need my approval to post anything. I merely commented that (a) he said he suddenly needed 220VAC in his CB shack, and (b) he didn't specify why, and (c) no legal CB gear I know of runs on 220 VAC. Then I offered my opinion that he was probably installing an illegal amp. After that I made a wry comment regarding being worried about obeying electrical code vs. disobeying federal law. You guys ran with the ball from there.

-Aaron-

2612. Yet another "speeding" analogy

Newsgroup: rec.radio.cb
Date: 2002-06-26 04:01:13 UTC
From: sparky@cet.com

<local_42remove@hotmail.com> wrote:

>You fail to understand.

No, I understand perfectly. You are looking for reasons to whine about
my posts, and in this case you are intentionally distorting the
context to do so.

> A person transmitting on the CB bands at say 50
>Watts presents no danger to himself if the equipment he uses is in good
>working order.

And 220VAC wiring in "good working order" doesn't necessarily mean
it's up to code. So if both your illegal amplifier and your wiring are
in "good working order", why bother to comply with local electrical
code but not federal regs? Are you even TRYING to understand the
concept here?

> You are comparing apples and oranges.

No I'm not, Dave. BTW, nowhere did he say he was running 50 watts
(didn't you try to drill something like that into my head earlier?)

> Many people Drive over
>the speed limit. Seems like in my area it is common for people to travel
>between 10 and 15 MPH over the limit. I would guess less then 1% of these
>same speeders would rob a liquor store. But according to the logic you have
>set forth they would. If they speed why would they not also rob?

Oh, it's that "speeding" analogy again. Haven't you been reading this
newsgroup long enough to know that a fine for speeding or jaywalking
is nowhere near the several thousand dollar fine (up to a maximum of
$17,000 per violation) for running and amp with your CB radio? But if
you check your local code enforcement you will see that violation of
the electrical code can also be quite costly as well as hazardous.

And let's analyze your "speeding" analogy. Let's say that for a
specific car you need one horsepower for every mph (overly simplistic
for sure, but not too-far removed from real-world examples). So you
need 65 hp to get maintain a speed of 65mph, the legal limit on many
freeways. Now since the legal limit for CB radio is 4 watts, and we
know that 1000 watt amplifiers are not uncommon, let's do the math:

4 watts is to 1000 watts
------- as ----------
65 hp is to 16,250 hp!!!!

Now since 1 hp represents 1 mph, that's a mighty big speeding ticket! In fact, isn't that somewhere near escape velocity for a spacecraft? So it is YOU that is comparing apples to oranges, Dave!

And just like house wiring, CB amps can be hazardous too. Maybe you haven't checked out OSHA's site? Or you missed the FCC's recent additions to it's regs (including new ham rules) regarding electromagnetic exposure limits? And have you ever seen a tank final arc over? Resonant circuits can create very high voltages out of very low voltages, certainly enough to ignite a combustible material, even at the mic (ever hear the term "burnt lips"?). Ever have an RF burn? If not, you don't want one -- it cooks the meat all the way to the bone, and takes forever to heal. Haven't you seen signs at gas stations warning people to turn off their cell phones at the pumps? Why do you think they do that? Just to annoy the customers?

And what about the power handling abilities of the transmission line and power cables? Sure you can make sure you are up to code all the way to the outlet, but what happens from there? How many 12VDC 100amp power supplies are UL listed? Hams are required by law to use "good engineering practices", but what law requires outlaws to do the same? If there was such a law it would be an oxymoron.

Then there is the issue of RFI and EMI, which are not even part of the vocabulary of the typical IO, but can be very harmful to emergency comm, medical systems, aircraft systems, and even automobile electronics (brake testing while keyed used to be standard procedure for commercial two-way radio installations). But it's ok to cause harmful interference because they usually can't pin down the exact source or cause, right?

Your argument that FCC violations are trivial is pure BS.

>Smart Ass

I made my point.

You can give it a new coat of epoxy. And I don't mean that polyester
bondo crap used to fill dents in cars. I hate to sound like a
commercial, but stop by your local gunsmith and get some Brownell's
AcraGlas. It's an epoxy that's used to bed rifle stocks, but it's the
best epoxy I have ever used for anything!

Don't bother, I'm starting to use my killfile more and more, and Randy
is one of the latest additions. History shows that whenever there is
an intelligent and worthwhile discussion to be had in this newsgroup,
Randy won't be involved except to troll. Keep him drooling about your
identity if you want, but he's not worth any more of my attention.

This is in violation with FCC regulations. It is not illegal to own a Ham radio - even if you don't have a Ham license. This is true even if the Ham radio is capable of out of band operation.

The rest seems to somewhat follow the law - except I wonder about the private individual being able to bring action. I don't think that the Federal law allowed that.

To all,

The "Omega Radio Club Inc", is looking for more members to assist in
community radio- communications work.
Omega members are volunteers who use their CB radio's to help the community.
We do many events during the year.
We're looking for more "Victorian Members" as we are a state based club,
located in Victoria-Australia.
If anyone is interested, please visit our website;
http://home.vicnet.net.au/~omega/ and obtain a "Membership Form"

2623. Re: Yet another "speeding" analogy

Newsgroup: rec.radio.cb
Date: 2002-06-26 05:23:48 UTC
From: Dave <local_42remove@hotmail.com>
Message-ID: <EdcS8.181830$6m5.156626@rwcrnsc51.ops.asp.att.net>
Source record: 128529

I'm not sure if I should respond. I've already made it to your killfile but maybe just maybe you'll see this anyway.

First, I'm sorry. I never meant to irritate you. Here I thought we were just in disagreement and landing a few pokes in the ribs. Again I'm sorry. If I had realized the analogy was "over done" I wouldn't have used it. I used speeding and robing liquor stores to compare running amps and complying with the NEC.

> No, I understand perfectly. You are looking for reasons to whine about
> my posts, and in this case you are intentionally distorting the
> context to do so.

I have no need to whine about your posts. I disagree that a person who is runing an illegal amp wouldn't want to have safe electrical feeds AND safe equipment. If I distorted the context then either I did not understand or you were unclear.

> And 220VAC wiring in "good working order" doesn't necessarily mean
> it's up to code.

This is true, I should have been more specfic. As an electrition when I say good working order this can only mean it is absolutly safe. My bad.

>So if both your illegal amplifier and your wiring are
> in "good working order", why bother to comply with local electrical
> code but not federal regs? Are you even TRYING to understand the
> concept here?

I understand what you are saying, yes. I believe a person who wants to have electrical feeds that complies to the NEC would also want to be sure his amps are operating correctly and safely. Because a person breaks the law does not mean they act in an unsafe manner. Let's see if I can pull another bad analogy out of my ass....

Take a person who builds bombs. This is clearly a violation of Fedeal, State, ect ect. law. This person is comiting a felony and yet they take pains to insure they store their explosives in a safe manner. On one hand they are a dangerous felon. On the other they still operate according to all safe procedurs for handling and manufacturing explosives. I am in no way claiming all people behave in this maner. In my limited experiance many people will violate one law while following a complimentry law like it was religion. Seems odd to me, but many people like to preserve their life and property even if they are breaking the law.

> No I'm not, Dave. BTW, nowhere did he say he was running 50 watts
> (didn't you try to drill something like that into my head earlier?)

I'm sorry I pulled 50W outta my ass as an example. I picked 50 cause it's much more than is legal put still low in the big sceam of things. I did not claim he was running 50W I specificly said "A person transmitting on the CB bands at say 50
Watts..." This was a generic "what if" type senario.

> Oh, it's that "speeding" analogy again. Haven't you been reading this
> newsgroup long enough to know that a fine for speeding or jaywalking

>
> 4 watts is to 1000 watts
> ------- as ----------
> 65 hp is to 16,250 hp!!!!
>
> Now since 1 hp represents 1 mph, that's a mighty big speeding ticket!
> In fact, isn't that somewhere near escape velocity for a spacecraft?
> So it is YOU that is comparing apples to oranges, Dave!

I did not claim MPH = Watts. I was not comparing MPH to Watts. This was not the point. The point of this senario was many people willfully break the speed limit but these same people would not comit a violent crime. Meaning, just because a person violates one law doesn't mean they will violate another. Although I suppose if they are willing to violate one maybe they are more likely to violate another. The senario earlier in my responce is better I suppose.

> And just like house wiring, CB amps can be hazardous too. Maybe you
> haven't checked out OSHA's site? Or you missed the FCC's recent

> Why do you think they do that? Just to annoy the customers?

You are correct sir.

> And what about the power handling abilities of the transmission line
> and power cables? Sure you can make sure you are up to code all the
> way to the outlet, but what happens from there? How many 12VDC 100amp

> power supplies are UL listed? Hams are required by law to use "good
> engineering practices", but what law requires outlaws to do the same?
> If there was such a law it would be an oxymoron.

There does not need to be a law for a person (even some one illegaly running an amp) to insure his equipment is possible of running safely.

> Then there is the issue of RFI and EMI, which are not even part of the
> vocabulary of the typical IO, but can be very harmful to emergency
> comm, medical systems, aircraft systems, and even automobile
> electronics (brake testing while keyed used to be standard procedure
> for commercial two-way radio installations). But it's ok to cause
> harmful interference because they usually can't pin down the exact
> source or cause, right?

This does not make it ok. I am not arguing that it is ok to break laws you don't agree with. I am arguing that a person running an amp runs an equel chance of being a dangerous boob or a person who is careful to have all of his electrical and electronic equipment operating in a safe manner. I don't think there are dangerous people out there, but you refuse to believe some one would comply to the NEC just because they also opperate a CB in an illegal maner. Is it possible for an amp to be operated and designed in a safe manner even if it isn't UL listed?

> Your argument that FCC violations are trivial is pure BS.

I never claimed the FCC laws were trivial. I operate well with in the laws set forth by the FCC. I follow the rules. if I don't agree with them I make my voice heard and try to get the laws changed. If I don't do that then I live with a law that I disagree with, I don't break laws because they are inconvenient. I must be a wimp, I drive the speed limit. I pay parking meters. I operate my CB acording to FCC regs.

> I made my point.

Yes you did. I wish I could make mine.

> ***>>PLONK<<***

Sorry to hear it. I thought you were an intelligent and well written poster. It is a shame you wont be responding to any of my posts (or even this one I guess) from now on.

Have a good one.
Dave

You have it a little mixed up, Bill. They are not outlawing the
ownership of such equipment; it's saying that ownership (of a radio
that has been used to violate the proposed law) is proof of violation
of the law by the owner. IOW, don't loan out your radio equipment.

>The rest seems to somewhat follow the law - except I wonder about the

I hate to think that we should someday need a federal law allowing us
to fart in the woods, and I don't think it works that way. It is only
when the federal government expressly authorizes or prohibits
something that the states cannot make any law in contradiction to it.
HR2346 did not specify enforcement must be criminal, and did not
prohibit civil enforcement. So as long as the civil action is not in
contradiction to the FCC's regs (or the Constitution), it is perfectly
legal.

Bill,
I think a lot of the 'ownership' stuff is going to
hinge on probable cause. It ought to be interesting
to see how some of this turns out.
A private individual may bring action based on any
law/ordinance by simply filing a complaint with the
proper authority, local, state, or federal levels.
What happens because of that suit is a different story.
If you don't have your 'ducks in a row', YOU can end
up on the receiving end.
'Doc

>Here's one you wont like:

You must have been reading my replies to Twistedhed, LOL. I admit, I am a bit harsh with him sometimes, but he deserves it. You don't know the history of our little conflagration. You're new here. Basically there are a few guys in this NG who are into illegal CB - for various reasons. Some of them depend on it for their livelihood. Some harbor a deeply held grudge against ham radio. Others are simply lowlife types lacking in basic integrity. Whatever their individual reasons, they all share a common trait. Whenever we engage in debate (a purely voluntary action on their part) they howl about their right to free speech. Then they tell me they want me to stop posting, and if they could, they would stop me from posting. In other words, free speech only applies to them and those that agree with them, LOL. Talk about religious zeal: these guys have been preaching the same old Gospel Of Illegal CB for years now.

Message-ID: <5c35b3ab.0206260111.71d1a55a@posting.google.com>
Source record: 128537

FLORIDA POWER PLANTS THREATENED
Two young Pakistani immigrants from Hollywood, FL alegedly hatched a plan to attack South Florida power plants. Pakistani immigrants Imran Mandhai, 19, and Shueyb Mossa Jokhan, 24 of Hollywood were accused this spring of conspiring to bomb electrical transformers in Miami. Safraz Jehaludi, a 21-year old computer technician from Miramar, FL is being held on charges he sent the FBI anonymous e-mail messages threatening to blow up the White House and a Florida power plant.

RF POSES DANGER TO POWER GRID
In Docket 02-98 the FCC refused to consider allocating a low-frequency amateur band in the 160-190 kHz range, due to the liklihood that ham radio transmissions would disrupt PLC (power line carrier) systems widely used to switch electric power substations on and off line. The Commission took this action despite the fact that PLC operates under Part 15 of the rules and, by definition, is accorded no protection whatever from licesned stations transmitting on the same frequencies. The concern is that interference to PLC could result in widespread power outages. If the power grid is that vulnerable to inadvertent shutdown caused by interference from relatively low power amateur transmitters, how vulnerable is it to disruption by malevolent forces* who might set up low-frequency transmitters to deliberately jam PLC?

*or illegal hi-power CB'ers? -Aaron-

Believe it or not, it was the cheap way to do it (more or less) at the time. These Horizontal Output tubes were cheap and transmitting tubes like the Eimacs were dear. You built the power supply out of TV transformers/caps and ran them at something like 700 volts @ 1.25 amps. If you needed cooling, you put a fan on a phonograph motor and made up the cost by using a common parasitic choke.

By that time the war surplus was gone or you'd have seen 807s.

Not nearly the fun of a cascading failure in a 32-pill tho.

Actually Aaron, It's not what you post. It's the manner in which you
post it that makes your intentions suspect. For example, Jerry O. just
posted some really good info on enforcement of CB rules. He's not
posting it in every thread that mentions illegal activity, just in
it's own thread. That way, those who wish to discuss it can do so and
those who don't need not wade through troll posts within their own
threads. You even chided Jerry for being so polite in his posting
manner. What's wrong with being polite? Unless of course, the whole
point is to rile some folks up?

You need to wake up and hit the alarm clock.

The frequencies are far removed from each other.

160,000-190,000 is a long way from 26,965,000-27,405,000 cycles.

Hello Rustyameri:

This is a common problem with these fiberglass antennas.

Lightly sand the surfaces, wearing a dust mask and gloves and long
sleeved shirt. Then apply a light and thinned mixture of Fiberglass
Resin over the fiberglass surfaces. Then just as this primary coat is
setting up, apply another coat with much thicker applicatio.

Do not worry if there is some extra resin leaving drops on the lower
surfaces, no one going to see it. The Klron or Rust-O-lum spray paint
can be used to paint the fiberglass surfaces when cured.

The paint will not add any insertion loss on the fiberglass radome, done
it a gazillion times.

This also works good on Station Master, or Commprod VHF or UHF Antennas.

Rock on Dude!

But that do you be telling? All (or almost)!
But lets stay, you leave that there is of the people that experiment, they
build etc.
You remember that the "big" they have suffered for become to recognize the
own plans.
You see Gallileo Galliei that has stayed imprisoned up to the death because
he affirmed that the solo turned around the earth.
You see William Marconi that for behavior what he has made is due emigrate
out from Italy.
These only any examples and they in common have that the LAW didn't ALLOW.
Who does he put on on the pulpit to judge if is it correct or no that
matter?
"WHOEVER JUDGES JUDGED VERR" and, "WHO E WITHOUT SIN CAST you FIRST
STONE."
I am with you friend, you send all to the..... SEA. HI HI HI

Your Wal-Mart does "Shipped" orders? Around here, if it's not on the shelf,
you don't get it. They don't have any sort of catalog or anything you can
browse through and order things that get shipped to you, or even to the
store... Enlighten me a little more on this...

Do anyone knows the type of Modulation light bulb that goes into the Tram D201?

2649. if you designed a cb,what features.....

Newsgroup: rec.radio.cb
Date: 2002-06-26 16:40:29 UTC
From: lilyv7@aol.com
Message-ID: <20020626124029.16547.00000947@mb-cm.aol.com>
Source record: 128555

if i could have a cb custom built,it would have the following features.
1) 3-position antenna switch (2 positions would be horiz/vert for beam the other marked for "omni" ant.

2)built in antenna tuner/with a nice 3" meter on the front (cross needle of course)

3)a built in digital signal processor (not an auto type unit,one that has a few decent filters to choose from)

4) dual finals,but designed to only "key" 4 watts,but would "modulate" to about 50 watts.

5) a base mike that is truly designed around the radios operating characteristics.not just the same old mike that is thrown into the box no matter what the rig is. an audio response control,say 3 sliders, on the front of the rig,to "tailor" your audio response from 0-5000 hz audio.

6) recieve pre-amp,with an adjustable gain control.(not just an on/off)

7) vox with a sensitivity control built into front of rig. (its nice to be able to solder and talk to the natives at the same time)

i would like to see it manufactured by yaesu/icom/kenwood. wouldnt that be a kick in the head??? ill tell you what,there would be alot of folks out there who would like to own a "cb" that is manufactured by someone other than the "scrubs" who are producing them now.....i think they would really "cash in" on the millions of "serious cb-ers" out there. think about it.....elpasogunslinger

Just to clarify, I am not really happy to see these kinds of statutes come
on line be-
cause I still believe that it will create hardship for innocent CBers and
hams alike.
I posted it to let people know that, more and more locals, not just towns
and counties,
might pass this as they become aware of it. If they can keep fines and
penalties, the
smell of greenbacks will surely offset the cost of officers' involvement.
However, I've
said it many times that I am afraid that, at the least, there will be a few
innocent CBers
and hams that end up having to take time off for court to prove that they
are not guilty,
or that they are exempt from local jurisdiction. I also noticed in the
Montana Bill that
there weren't any specific exemptions for hams, and that has to be included
in any local
law. Being hassled by fat Bubba Dep'ty Dawg would piss me off BIG time.

>Dave, I was using satire to make a point.

...and thereby perpetuating the problem.
You're either a troll, a troublemaker, an idiot, or all three. You have found the best way to take a valid viewpoint and shoot it dead by acting like a child.
If you want to convert people to your brand of CB-legal behaviour, it is appallingly obvious you have been barking up the wrong newsgroup for way too long. Your choice to stay and stir up trouble indicates your uselessness as a champion for legal CB practices AND as a responsible, controlled newsgroups participant.
Personally, I abhor illegal use of the radio, by CBers, Hams, or anyone else. But here's the important aspect of the whole thing...
We all KNOW what's legal and what's not; some choose to ignore it, even though it's wrong to do so. Still others find the illegal amps, irritating noise toys and poor alignment/mods/distorted transmissions to be such a nuisance that we keep the laws because of good taste more than any fear of breaking the law.
Are many CBers breaking the laws? No doubt. Does this make them evil people? NO.
MANY who 'break the law' are otherwise decent and responsible operators. They may run a thousand watts but they set it up right and don't bleed all over the band. Then again, many are irresponsible, destructive and childish, to be sure; but no more so than you act in here.
Enough of your b.s. Aaron. All you've done in here is create garbage threads and rile people's passions, without accomplsihing anything meaningful toward the goal of legal CB practice.

> 4) dual finals,but designed to only "key" 4 watts,but would "modulate"
to about
> 50 watts.

Easy, drive your finals in push-pull and take the output in parallel. In ancient days it was used as a frequency doubler or quadrupler and called push-push. There will probably be enough imbalance to get some dead-key out of it but when you talk, wowski dumbrowski will it spit.

What it will spit is Double Sideband Supressed Carrier, same as SSB before it is run thru the filter to knock down the other sideband. Pure audio, man! Swang out the old wazoo.

Now of course no AM detector known to man will decipher a word you say and even the sidebanders will bitch that you are hard to tune but those guys with synch detectors will cream their jeans big time. But they don't use synchronous detectors on CB, do they?

Which brings us back to the idiocy of Swang. The idea as it is generally mis-understood in the CB community is that anything above deadkey is audio -- beep, wrong. For the AM detector to make sense of a sig requires that the carrier be two-thirds of the input to the detector. Repeat after me: Modulation, Mixing, and Detection are three words for the same thing. All follow the two-thirds rule.

But the very fact that one can, at some expense to his sanity, listen to swang at the very least tells you something: even at peak and at all places between the carrier exists at at least two thirds of the output. So all you are doing is changing the signal strength at an audio rate which certainly qualifies as a vast effort toward a half-vast result.

But it sounds louder, the screams come back. Yes, it do, but not for the reason you think. Virtually all receivers have some method of shutting down the gain of the receiver in the presence of strong signals. This is called generically automatic gain control but words like 'volume' and 'level' sometimes get into the act. For normal AM listening, some of the carrier is rectified for this purpose and sent forward as bias on the r.f. amp and the i.f. stages. A large cap is used to even this process out a bit so this style of AGC has a relatively long attack and decay time. What swang really does is partially defeat the receiver's AGC and rattle the speaker cone. BFD.

Sideband receivers typically have a faster attack time, which is sensible if you think about it, so they are less shockable. And a lot of noise blanker circuits are fast enough to defeat swang entirely. Lighting burst or the bozo down the block, big or small we blank them all.

Swang is the latest manifestation (or infestation if you like) of some ideas that go back into the 30s for somewhat different purposes. About all they did for the broadcasters and short-wave stations that used it - and far less than you have in mind - was to light up the phones with listeners wondering what the hell was wrong with the transmitter.

To repeat myself as we tend to do with age, Swang is Bullshit.

Jerry O wrote:
> Sometimes it is asserted that local governments aren't taking advantage of the Local
Enforcement Statute. <

They aren't. Look at the states that were instrumental in pushing through HR 2346. Nothing from them concerning cb enforcement.
Just because they pass it doesn't mean they will enforce it.
What appears to be happening is a "fail-safe" plan. IF a cop in, say Montana, gets a compaint call concerning cb, the statute and local legislation may or may not come into play.
Which means they may or may not escalate the case. The level of seriousness at which certain hammies falsely claim a cb epidemic is not shared by the rest of the world. It's practically a non-issue, proved by the redundant posting of such news when something related does take place.

new condition. $185.00

Older radios

Demco Super Sattelite 23 base, 3 pieces with modulator fair to good
condition $125.00

realistic trc 30a, nice condition, original box, 23 channel am base
$30.00

Cobra 85 23 channel am base, nice condition $30.00

Metrotek Pacer II Tube am base 10 channel tx, 23 channel tuneable rx
$45.00

2 Johnson messenger 1 am base good condition $30.00 each

Handheld Echo mike $15.00
D104 Golden Eagle desk mike, Gold plated limited edition Astatic mike,
Plating
is about 80%, works perfectly has sound toy button installed on base
no sound toy. not in collectors condition but looks decent and works
excellent. $75.00

3 D104 Desk mikes all 3 amlified stands work, only 2 good heads. good
condition $45.00 each, all 3 $80.00

Turner Super Sidekick Desk mike black/chrome very good, $45.00
Turner Expander 500 desk mike Good condition $45.00
Turner +2 desk mike have 2, one good, one very good $40.00/$45.00
Turner M+3 mobile +3 hand mike Fair condition $25.00

Rf-unlimited Turbo Echo (best Echo Board) have 2, new in package
$25.00 each
Avon Ding-dong sound toy $15 each have 2
Roger beep board Single i think $10.00 new

Antron 99 $35.00 up for a few weeks
Wilson V-quad $55.00 up for a few weeks

PDC 700 power/swr/mod meter $45

Heathkit DX100 missing some tubes otherwise complete fair condition
restore or parts untested $100
Heathkit DX40 Complete, good condition works well $65.00
heathkit DX60b works good, good condition $65.00
Johnson Ranger missing tubes, untested $150.00
MFJ Versa-Tuner III 2kw meter/tuner Very good condition $125.00

Would consider selling everything for one price. All prices are
PLUS SHIPPING, your choice on shipping method, Pickup is fine.

I am looking to buy a Motorola brand CB radio with AM/SSB and 40 ch coverage. I am looking for one in excelent working condition with no modifications. I would like it to include the original mic, bracket, and power cord. I had one and sold it, now I wish I still had it.

Please e-mail me if you have one you would like to sell.

Thanks.

Since you claim to have knowledge about CB compliants (and also how
the 'rest of the world' feels about it), can you clarify a few things?
How many complaints related to CB interference does the FCC receive
every year? How many compliants related to CB interference do local
PD's receieve each year? How many complaints of 10 meter intruders has
Riley receieved this year?

How about sharing your numbers with us?

Source record: 128577

>How do you figure I already know what you wear at night?<<

An educated guess based on your past
obsessions.

> How do you figure I care? <<

You said as much with your cares and concerns about my underwear.

A more likely scenario is
your import overheating from the A/C running so hard, 'cause you'll have your windows up and doors locked 'cause of Cooter Mae's finest lineage and welcoming committee. When the sun rises, I'm usually home within the hour or two, with the exceptions of weekends when I'm playing heap-big radio pirate. You know all about that. You drop in frequently on weekends , call and all, just like clockwork. <g>

>If you are actually using Leland's callsign <<

Where was Lelnad mentioned in this post? :) "Lelnad" is someone I can assure you no one will ever seek to imitate,
in any fashion.
The innuendo on display in your window pays homage to your multi-faceted fascinations.

>Fine, my mistake. Who "drops in like clockwork on weekends" and how do you know it's me?<<

Too many friends in your area for you to remain anonymous. Remember what I told you about low-profile operating.

>on unauthorized frequencies on any regular basis, let me know what time and what frequency. Maybe I'll get lucky and be able to tape it. What do you care, right?<<

Right.

>You're a free spirit, yes?<<

Actually, I'm a Mongoose type of guy. At least I was.

>Great. I hunt Mongoose. At least I did. <<

Yea? How far do you drive to find one?

>The FCC won't come after you, correct?<<

Depends what I did. I suppose if I turned it up and wiped out a commercial radio station in all of Oldsmar, say.....one owned by Clear

Channel, and say.... I did it every weekend on a specific frequency, to the north end of Tampa Bay and did it over and over and over and over.....you're correct, they won't.
You have maybe another point of view?

>I do and you won't like it.<<

You're assuming others share your shortcomings when infact you are of the extreme minority. I don't assign personal likes or dislikes to personal opinions...they just "are", they're not good OR bad. Someday you may acquire such mature, fine insight should you be so fortunate.

>Heck, I bet you'd be proud if I heard it.<<

Heard WHAT? Me? Hell, you've already heard me...you tried to deadkey and was put under the porch by a superbowler from your neck of the woods.....

>This is news to me. You have some proof that all this occurred? <<

Hahaha! Sure, you asking for proof of it is enough for most of us. It's a monkey you seem unable to shake from your hunched back.

you've been acting out ever since,..it's that rabid temper thing you never learned to control or get over, but let others manipulate. Don't act like you follow the letter of radio law..you don't.

>You got nothing to hide from anyone. <<

Correct.

>So why are you hiding behind the name "twistedhed"? <<

I didn't come up with internet protocol...merely followed suit with my little webtv. You would have to get beyond your compulsions with me in order to find why personal names and addys weren't displayed when usenet came into play.

>So let's give it a whirl....my ears are on! -Aaron-<<

Now get your brain to catch up with your ears and you might be alright.

>If you're imagining you hear me on the radio, then I'd say it's your brain that's faulty.
-A<<

I don't hear you anymore. You don't have the ass for it.

>Yeah Ok. The only reason they went ham first is, Riley vowed to clean up his own bands first and they are far easier to catch,
especially with the Self- Enforcement of ham. Do you think another Cber would turn
one of his Keyclown brethern in for running a bigger amp than his .
Doubt it twitys.<<

Of course not. From what I have seen here, and since Danaher and Hall both have claimed what takes place on the air is a direct result and reflection of society as whole, it shows hammies to be one of the largest, collective group of criminals I have ever come across, if I were to use their own flawed analogy of "You either obey all laws or are a criminal supporting anarchy."

From: oris@dirtball.com (Oris)
The only reason the feds don't watch CB any more is cause your local police are. The FCC sayes that they don't have the resources to follow up on over 4 millon transmiters cramed into a 500 KHz section of the band. Ham radio operators are getting watched over cause FCC dosn't want the same problems on the ham bands as there is on the CB band. I say give the CB bandback to the hams and see what happens. I still can't figure this one out Why would the FCC put a radio service on a band that is so loaded with propagation and then put a 150 rule into effect. Make no sense to me! Just like the government.
Oris

Most local cops don't even know cb exists anymore (nor care), let alone there is a statute allowing them to enforce certain aspects of it.
As always, there are bound to be exceptions, and no doubt, we wil hear of them as they occur. Any sooner and it will be play-by-play.
As far as ham radio is concerned, when they stop charging a fee for licensing is when the enforcement will suffer. The cash is the only reason any enforcement exists now. Sooner or later, the hammie spectrum will be just like cb..only the safety pissers and extreme violators will be problematic.

I like your choices of manufacturers, let me add two more names to the
list, Ten-Tec and SGC who both make good quality rigs.

Now I'll add a few features I would like in radios.

8) Easy to read cover plate, and easy to adjust knobs for people with
thick fingers like I have,

9) Adjustable backlighting for the display and meter.

10) a real meter , a large one, not some stupid LCD screen with bars.

11) better quality speaker, or a mtaching external speaker

150 amps? You could save an awful lot of cash and trouble if you got a power supply rated at 4 amps. After all, that's really all you need to power a legal 4 watt CB radio.

Aaron do you think there are more hams gone bad or CB'ers gone bad? I would guess Ham radio presents a larger problem. Don't hams tend to have much larger set ups, power, antenna, capability? I don't think average Joe Blow would know that the guy next door with the 6000 foot antenna and power meter spinning faster then the earth rotates is who is causing his TV to fail and his microwave dinners to cook themselves? Seems people are pretty stupid these days. It's just to bad people don't give a fuck about who they hurt when they are having "innocent" "harmless" "victimless" fun. Stop trying to convert the illegal CB'ers and instead educate the up and coming AR/CB/whatever hobbyists about right and wrong and why we should follow the FCC regs.

> Most local cops don't even know cb exists anymore (nor care), let alone
> there is a statute allowing them to enforce certain aspects of it.

Well that is a power play. The cops here in GA know. The cops in Franklin CO have amps for CB radio in their POVs as well as their police cruisers. One or two of them have bad ass stations. Who is going to bust them? Once they find out you can bet they along with local governments are going to try and take control. I have already heard stories about so of the police in texas busting illegal CB stations right and left.

>
> As always, there are bound to be exceptions, and no doubt, we wil hear
> of them as they occur. Any sooner and it will be play-by-play.

This will be based on the CB station operator. If he can get his station clean enough not to bother his neighbors TV's VCR's Radios and Telephones there should be no problem with the local police department. No madder what rule he or she breaks.

>
> As far as ham radio is concerned, when they stop charging a fee for
> licensing is when the enforcement will suffer. The cash is the only
> reason any enforcement exists now.

That statement is false the fee that they charge for testing is for the test itself. The VE can not be paid in any matter for what he or she is doing. Fees for test would not even put a dent in the FCC's budget

> Sooner or later, the hammie spectrum
> will be just like cb..only the safety pissers and extreme violators will
> be problematic.

Well I would welcome how 'bout it skip land or DX land. I think that that is more fun then calling CQ in real terms CQ is a morse code call. The proper voice term is seek you on my radio. Calling Seek You Calling Seek You. The proper end greeting is 73 not 73es the think there is 73es has creeped into the ham bands. THe language has changed over the years and as more people test in (you know that to test in now days isn't that difficult) the lingo and terminology will change. So I look forward to a time when Seek you skip land will be the status quo.

Why would you need an Antenna tuner?? 4 watts is the maximum output. I believe that this would be a waste of money.

The built in SWR meter would have to be accurate. I think that this would be a good feature. The meter would not only work SWR but power out and modulation.

>Get an SSB rig and go nuts.

Ok, I guess I'll add my $0.02...if it's worth that much after today's market.

I'll go on the premise that the FCC will type accept this new gem.

Modes: AM/SSB/CW

Power Output: 5 watts AM/CW & 20 watts SSB (Variable)

Built in speech processor. (On, off, and variable.)

A receiver section that NORAD'd be envious of. (optional filters)

6-Digit frequency counter. (Green, thank you.)

S/RF/Mod/SWR analog cross-needle.

Hmm...almost sounds like the old CP-2000?

needed but
> its nice to have on hand to maintain good comms as long as possible

Again, this comes from two points of view. Phone on 10 runs from 28.3 to
about 28.8 as a practical matter (more legally but all sorts of things
from satellite downlinks, etc get in the way)
so I am competing with very few relatively in an area larger than the
legal 40 that is not channelized so more can be made of it. And there is
always 24.93-24.99 which in fact I like better owing to the lack of number
freaks. Ten dead birds might be useful but it will not be as big a deal
for me as it might for someone fighting it out on some freq above 405.
Power is nice but you do have to have the receiver for it or it is just
strutting.

And when the band drops out, there is always 15 or 17 meters, the latter
turning into quite a DX band. So conditions have to be pretty grim before
the diff between 20 and 200 is that big a deal on 10 or 12 from my
perspective only. I don't work that hard these days for things that get
me paid, laid, or fed so busting hump on a hobby just is not in the cards.

There is indeed a diff in outlook. And just because I really do not grok
it does not make it illegal, immoral, or fattening. (Sit on a tack,
Aaron). If I were limited to one band I would probably have given it up
years ago and if it had to be one band, it sure as hell would not be 27
MHz or 28 either for that matter.

Go ye and sin some more.

Dick NBK

Not sure I understand the concept. My bad, sorry. :-(

>Any opinions on this?

If you're only interested in casually operating AM, grab it. Otherwise, I'd
recomend a good sideband rig. Grant LT's can be regularly found on ebay.

Mounting the antenna horizontally along the length of the body sounds more like back woods voodoo and should be avoided. It might look better, but you'll only talk to the guy next to you at the stop light. I don't want to touch 'keyclown' Suffice it to say that a lot of CBers operate illegal equipment. Take the $30 you were going to spend here and put it with some more and buy something-anything at the local Walmart or Radio Shack. Old CB's are like old condoms. You just never know where they have been.

Hello Bert:

Yeah great antenna makin stuff all right.

They carry a after market insulator replacement for the larger Yagi Beam Antennas, that is truly bullet proof.

This new insulator I think should also be made for 2 inch OD Booms, so that a after market Hair-Pin or Tee matching system could replace the inefficient Gamma type matching systems.

Jay in the Great Mojave Desert, ... just down the road ah ways from the fillin station.

Having had the chance of late to futz with some CB units, the only really bad thing about most of them is a really crappy receiver front-end. And I can understand why the cost accountants keep the engineers chained to the oar because this can cost a bit of bux you don't want to put in a 39.95 rig at Walmart no matter how cheap the Chinese can make them.

There are several characteristics of decent front-ends that revolve around the '2/3/ rule' that I seem to be harping on of late. Obviously the local oscillator has to fairly scream to be 2/3 of the input which can cause radiation problems under Part 15. But it also means a good bandpass filter up front to keep undesired strong sigs out. The hard part is the filters you mention, Bert.
To some extent a mixer is a transmitter and that which follows has to be able to present a 50 ohm (or whatever) load at ALL of the freqs coming out of the mixer or they are reflected right back. Never thought you would consider SWR in a receiver, did you.

The biggest single one is the Local Oscillator itself which can be suppressed by use of a balanced mixer. A mixer also balanced for the input -- double balanced mixer -- will guarantee that none of the original signals get shoved out of the mixer. Ten-tec used FETs in a single balanced high-level mixer in the Tritons in the 70s and for the period they were gangbusterly and not really all that expensive (typically Ten-tec BTW).

Perhaps the easiest approach is to put a higher current FET between the mixer and filters set up so that the mixer gets 50 ohms everywhere and the FET takes the mismatch which means zip. This was once pretty standard military design. The response of filters to frequencies outside their passband is rarely a known when designing so you insert a buffer. And it does wonders for adjacent channel rejection -- when someone is bleeding over, he really IS bleeding over.

And it is common today for the first i.f. to be 45.75 MHz owing to the availability of TV xfmrs in that range and filters as well. So you begin to see the picture: up-convert, do your selectivity thing, and then and only then get something like 110 db or more out of the i.f. strip.

Now mixer input was once the mark of schlock but in fact sensitivity is quite adequate right up to the 25-30 range. The r.f. amps you usually see are there to put another tuned circuit between the antenna and mixer, to prevent radiation, and offer a convenient place to hang AGC, all of which are useful but to think of them as pre-amps was wishful. In the tube days, it was common to use a 'sharp cut-off pentode' 6J7 or 6SJ7 that AGC could turn into a coupling capacitor in the r.f. and a 'remote cut-off pentode' in the i.f. that the AGC could not completely turn off under any conditions. To some extent this was because the pentagrid converters, even when fed a separate Local Oscillator which the good rigs did, were spongy beyond belief. So hanging a FET out there with proper static protection probably makes sense in our design.

You are not going to get this for four easy payments of $29.95.

Dick NBK

Interesting piece of hardware! Must have been built subsequent to the rules, note the A & B on the bandswitch. Non-QSK and it does take 50 watts to goose it.

The reserve is not a bad price if the tube is any good.

By disregarding a law you are ignoring the intent and purpose of that
law, and whether you can understand it or not, safety just might be
one reason why the law exists.

>> religion. Seems odd to me, but many people like to preserve their life and
>> property even if they are breaking the law.

Yes, that's a very bad analogy. Someone making bombs illegally is
probably doing it for illegal purposes. You could tone it down a
notch, maybe by referring to illegal fireworks manufacturing, but that
still doesn't work with the history of those fireworks plants blowing
up and killing many of the workers.

You have to consider why the law is being broken in the first place.
Usually it is because the person is too stingy and/or lazy to spend
the extra money and/or effort in order to comply with the regulations,
and one of the first laws to be ignored in those cases is usually the
laws regarding safety. It's the easiest place for a company to cut
corners.

You should also notice that, while your statement "many people like to
preserve their life and property even if they are breaking the law" is
correct, you are forgetting that many of these same people have little
regard for the life and property of others. This should be evident by
the hundreds of thousands of people busted for drunk driving every
year.

Fine. But also understand that even a small amplifier can go bad. I
have a Pride 100 on the shelf that has a cracked trace just off the
input transformer. Not only did they use cheap PC boards, but they
made no provision for such a failure. The result is this puppy still
puts out 100 watts, but 89 of them are on 117MHz (self-oscillation
frequency). The only thing the "appliance operator" would realize is
that his signal isn't getting out like it used to, and that's exactly
the reason it was brought into the shop. So not only did the
manufacturer disregard safety issues for the sake of the almighty
dollar, but the user could have gotten in serious trouble (the amp
transmitting so close to 121.5MHz) simply because he was too lazy to
get a license and do it right (most hams are concerned about proper
and clean operation -- most IOs are not). And he thought he was
operating safely because he was using low power. Good thing he doesn't
live near the airport.

>> are more likely to violate another. The senario earlier in my responce is
>> better I suppose.

You are correct by saying that if a person violates one law they are likely to violate another (assuming they continue to get away with it). Violence isn't even an issue here, since violent crimes are usually committed by violent people. Regardless, there are some people that will commit bigger and bigger crimes until they get caught (Enron, Worldcom, etc), while others will see the big picture and stop the escalation. If you can figure out who will do what, you could win a Nobel prize.

The fact remains that safety of life and/or property is never a consideration when a person chooses to violate the law. If it was, they wouldn't be committing the violation. Even a barefoot freebander intrudes on someone else's "property": even though the immediate damage may be insignificant, it provides social reinforcement and validation to those that will escalate the degree and frequency of their violations. Analogy: If most people on the freeway drove the speed limit, the speeders wouldn't be speeding nearly as fast or nearly as often. Would that make the freeways safer? Most certainly!

(BTW, if you read some of those FCC reports, the person getting the
NAL sometimes uses the excuse that "everybody else is doing it". There
are humans and there are lemmings. Humans understand the necessity and
purpose of laws governing a social structure: lemmings, indifferent to
both reason and consequence, just follow the crowd.)

Most laws exist to deter unsafe or harmful actions, and to provide
accountability for damage that results from the same. The NEC and the
FCC regs have similar functions in that respect. Yes, some laws can
seem pretty ridiculous, and some of them may insult your intelligence
(like the required safety warnings on a cup of coffee), but without
laws to protect you from the unsafe practices of others this would be
a very dangerous country.

>> > Then there is the issue of RFI and EMI, which are not even part of the

>> safe manner even if it isn't UL listed?

Of course, and it's also possible to safely wire your shack for 220
without meeting NEC. So why bother with one law but not another?
That's still the question, and it remains unanswered.

>> > Your argument that FCC violations are trivial is pure BS.
>>
>> I never claimed the FCC laws were trivial. I operate well with in the laws
>> set forth by the FCC. I follow the rules. if I don't agree with them I

The first time I encountered a hairpin was on a 6-meter Telerex beam and while I played their silly game it was a lot of years later before I could claim to understand the problem being solved and why the coax was looped.

A lot of multiple element narrow beams have a feedpoint impedence so low as to be obscene and here is where the hairpin shines. A tee match is simply two gammas for balanced line in my terminology so I am not entirely sure what you mean. Droop it and it is a Delta match.

Why should a gamma be inefficient except for cheesy plumbing? It is electrically the same caper as tapping a loading coil. Educate me.

The biggest reason more manufacturers do not use insulated elements is liability; the electrical code does like DC continuity so even UHF base verticals are folded unipoles. From a radio perspective this is a bit silly but it does keep static down on hf.

Something you might want to file for later is the idea of loading a tower etc, grounded tho it be, on 40 or 75. You need to run the cables inside the tower. It is matched gamma or a somewhat more complex method called an Omega match using caps and milady's Tupperware for weatherproofing. It is a hi-angle radiator which is useful for short haul stuff and gassing with the not local but not far friends on the low bands.

Yes, I have often suggested that someone take a topic to a more
appropriate newsgroup. Do they have to follow my suggestion? No. Will
I put them in jail if they don't follow my suggestion? No (how could
I?). So exactly how am I "stopping" them from discussion? They have
free will to do as they please. This is Usenet. In fact they don't
even have to read my post. (Are you getting it yet?) How am I
impinging on their free speech?

> Your Wal-Mart does "Shipped" orders? Around here, if it's not on the
shelf,
> you don't get it. They don't have any sort of catalog or anything you can

They have a whole web site you can look at and from which you may order!

http://www.walmart.com/

On their site, search for "CB Radio" and even this model will appear before
you eyes.

Take care,

Dennis

I'd spend a few more bucks and get a new basic model CB. I like the Unidine 520XL only 50 bucks. Just basic features and seems to work well in my Cherokee. With the space available in a Cherokee it is nice to buy a small unit. As for the antenna thing. Sounds like a bad idea to me. A four foot firestick seems to give me good reception on the road and leaves me low enough to still pass under everything but parking garages and drives thrus. Both of which I hate anyway :-). If you give me a real email addy I'll send you a few pictures of the way I set up my CB in the Jeep maybe it will give you some ideas. Key Clowns are distant relatives of the Killer Space Clowns, be very careful Both have the full backing of the "AKC" American Kennel Club. Good Luck and happy Jeepin

2717. Base Amplifier (Ten Tube Amp)

Newsgroup: rec.radio.cb
Date: 2002-06-27 04:15:38 UTC
From: stevejfranklin <stevejfranklin@attbi.com>

Kicked off Ebay, Kicked off Yahoo, Bad Ebay, Bad Yahoo.
Just trying to sell a 10 Meter Amp with 4 tubes driving 6 Tubes. Input power 4watts, Output 450 watts, great on 10 Meter SSB. (notice I said 10 METERS)
I know everybody thought It was a CB amp, but it was used in the 10 Meter band driven from a converted AM/SSB CB and operated it in the SSB mode. If you are interested
I have pictures of the unit. (I need to be cafefull on what pictures I send, one of them shows the CB driving the amp OOO No.)
e-mail Me if interested.

(Its bad because someone else thanks they are playing Police, and they are going to save the world, because we are all really worried about that a amplifier might get into the wrong hands. Maby they should be a adult and ask the seller a question about the bid before sneeking around like a bunch of chicken shit kids and pulling the plug on you.)

2718. Re: Yet another "speeding" analogy

Newsgroup: rec.radio.cb
Date: 2002-06-27 04:21:34 UTC

Message-ID: <ipwS8.165891$R61.59558@rwcrnsc52.ops.asp.att.net>
Source record: 128624

We will agree to not see eye to eye on this one I suppose. It is becoming clear we are arguing opposite sides of the same coin. Correct if I'm wrong.

You say: Why follow NEC codes or safe operating practices if you are breaking with FCC regs anyway?
I say: Just because you are violating FCC regs why not operate in the safest manner possible whilst doing it?

I see and agree that many people are too lazy or ignorant to operate safely. Hell, many people running legally have some pretty dangerous power supplies or faulty equipment. Though I suppose having electrical not following NEC is a violation just as running faulty equipment is, so now we come round in a big circle and I'm confused and typing randomly at this point....next move.

2719. Re: Shack wiring upgrade? 150 amps for CB?

Newsgroup: rec.radio.cb
Date: 2002-06-27 04:45:46 UTC
From: Dave <local_42remove@hotmail.com>
Message-ID: <_LwS8.166204$R61.59014@rwcrnsc52.ops.asp.att.net>
Source record: 128625

Good response Aaron, I agree.

Now for mn102,

Short version;
Run 1/2" EMT from the panel to your shack. Terminate the 1/2" conduit at a 4x4 box. Get your self a piece of SO cord of the proper AWG for the Amps your amp pulls and wire it (make sure to use the proper connector at the back of the amp.) Please do not use a cord longer than 5 feet. In fact use the shortest cord that is practical. Put a cord cap on the end of this SO cord rated for at least the same as the amp draw on your amp. Preferably use a cord cap specifically intended for 220V, these type of plugs don't fit into a 120 configuration. Get an appropriate receptacle for your cord cap and install it in your 4x4 junction box with an Industrial RACE cover. At the panel pop in a 2 Pole breaker of the appropriate size. Run THHN of the appropriate gauge from the receptacle to your breaker. You will want A Red wire a Black Wire A White Wire and A Green wire. The red and Black are your hot colors. They will end up connecting to the two black wires hanging out of your amp. The white is your neutral or return. It will end up hooked to the white on your amp. The green is ground. Ground is important. You may want to run two grounds. Run one to the junction box and screw it to the box, this acts as a ground for the box and conduit (code specifies the emt by itself is an acceptable ground, don't believe this) The other ground ties to your recepticle and thereby ties to the ground on the amp. Unfortunately the scenario I gave you mean you should use an isolated ground receptacle. The recep gets it's own ground and the chaises gets it's own ground, but that isn't really necessary. I could look up part numbers for you if you want, but I have a feeling you don't want me to.

Long answer comes in two parts, first I ask more questions then I give a long detailed answer with part numbers ect.
Lets make this clear, the shack is on the first floor and there is a panel located in the basement?
What type of panel do you have? Cutler Hammer, Square D, ect ect. If you had a cat# and brand it would help. Is there space in the panel for a new two pole breaker?
On the back of the amp I'll assume you have a 1/2" knock out with 4 wires just hanging out? Is that what you see?
Check the name plate on the Amp. What I say next will probably get me in a lot of hot water with the AKC. NEC regs require all electrical devices have a name plate on them giving certain information. Look on this name plate and tell me what it says. I'm not gonna do the math or make assumptions about the power draw of this unit. I know it is 150A at 12V but what I need to know is under a full load how much current it draws on the 220V line. I will be able to give you some advise but how to get from panel to shack would be

difficult. I am not there to see the terrain. Normally I would give advice about the routing but getting from downstairs to up complicates things big time. Well, maybe not, but we can talk about that after we know the draw other specifics.
What experience do you have running electrical? Makes a difference on you've done before. Even basic things can over whelm some one who knows nothing. Once you know the basics, it's all cake work though.

Maybe I'm just tired...
Dave

Also please check with your local town and city ordinances. Many (like the example below from White Plains, NY) require ALL work to have a permit and be done by a licensed electrician.

I would be careful of following any instructions you receive in this newsgroup from amateur electricians. This is not to spoil your fun or limit your freedom but to save your life and the lives of your family should some error cause a fire or lethal shock.

-A

ELECTRICAL: A licensed Master Electrician is required for any work involving electrical wiring, fixtures and appliances (more than 50 volts). All electrical work, regardless of voltage, requires an electrical permit.

Hello Dick:

New money apperas to be present, in the bidding. We will see!!!

A & B, yeah so its ready to go!

The factory can add in the QSK, if you can get it cheap enough.

The amp will be linear, even with the 20 watts of drive, I am sure it
will have 10 to 13 dB gain so that puts the output at 200 to 400 watts.
A fair amount of steam.

Jay in the Mojave

>***You say: Why follow NEC codes or safe operating practices if you are
>breaking with FCC regs anyway?***

No, I said what I said. Why bother to follow the electrical codes and
not federal laws? I said nothing about safety, you did. But since it
is possible to run an illegal amp with relative safety (to yourself,
at least), and its also possible to install 220VAC in your shack
safely without following the NEC, then the safety argument is moot.

>***I say: Just because you are violating FCC regs why not operate in the
>safest manner possible whilst doing it?***

Not only does that not answer the question, but is really quite
contradictory: If you want to operate in the safest manner possible
you wouldn't be operating illegally.

I'll boil my question down to as simple as it can get: if you are
going to violate law X, why bother to comply with law Y?

>I see and agree that many people are too lazy or ignorant to operate safely.
>Hell, many people running legally have some pretty dangerous power supplies
>or faulty equipment. Though I suppose having electrical not following NEC is
>a violation just as running faulty equipment is, so now we come round in a
>big circle and I'm confused and typing randomly at this point....next move.

And I thought you were just starting to make sense!

>on you.)

Maybe YOU should "be a adult" and start acting like a responsible
citizen. It's a violation of federal law just to -advertise- the amp
for sale, even on a newsgroup. I'm sure Aaron will quote the statute
for you if you ask nicely.

2728. New Galaxy radios on the way

Newsgroup: rec.radio.cb
Date: 2002-06-27 05:57:44 UTC
From: Sean <SPAMBLOCKERbigfoot1@core.com>
Message-ID: <3d1aa95a$0$1432$1dc6e903@news.corecomm.net>
Source record: 128634

Brand new Galaxy model was dropped off today for inspection. Looks VERY promising. Can't remember exact model number, but was either a DX 47 or DX 48. Uses the newer 6900 board (RG 99, etc...) with no surface mount and a single 1969 for the final. This drives an all new built in 2 x 2290 linear with a new "high tech" micro-sized cooling fan. Heat sinks are mounted on the bottom lid and quite miniscule in size. They should not pose a problem to mounting in tight areas ala the big fins on the 2970 / 6900 / 6300 series with built in amps. Forced cooling through the rear of the radio, which has vented heatsinks built (not bolted onto) the chassis. This one is AM / FM with no freq counter built in. Also does not have a jack to plug a counter into but does have the newer "sardine can" style digital echo. 4 pin mic is mounted on the front chassis with an "illuminated" faceplate for improved visibility of controls at night.

All i can tell you right now is that this radio has what many of you have been waiting for i.e. the board has demonstrated the best sensitivity of any design currently on the market and the absolutely SMOKES the 2970's, 6900's, 6300 Turbo's in power output (NO comparison).

They've got another model coming out shortly that is all mode with counter, echo and a single 2290 for power. Also has built in fans. Sean

Can I take a friendly shot at this one, Frank? The analogy of speeding is a good one. After all, it is true that folks who cruise so much as 1 mph over the posted limit are breaking the law. I'd venture that those same folks would not commit armed robbery. I don't think anyone really follows laws SOLELY because those in authority say so. There's a cerebral reasoning process going on, even if it's subconscious.

I'd like to offer a more relevant analogy. How about a guy who's willing to have his CB radio "peaked and tuned" at the point of sale. Many shops offer this service and aggressively push it with the sale of a new rig. (Predominantly the high-end models.) So here's John Q. who takes his Cobra 148 GTL (Or even a RCI-2950 at 25 watts.) home and cheerfully runs his rig at approx. 17 watts P.E.P. on SSB. Ask Joe if he'd run an amp or perhaps freeband and you might be surprised to hear that he's not willing to do that for a number of reasons. Perhaps he's reasoned that he's doing no harm in running 5 extra watts on SSB yet running a few hundred would cause harmful interference or perhaps the risk is too great? In any case, joe's not just "following orders," he's reasoning it through.

Now there are those who say that if you're willing to break even so much as one law, that you're morally or ethically corrupt. This, of course is poppycock. We are all not without legislative sin and all is not black and white. I'm not defending those who run excessive power or freeband. I'm just pointing out that not all who've operated "illegally" need not be immediately doomed to eternal damnation. Joe Shmoe running at 17 to 25 watts P.E.P. on the legal 40 is not equal to "Kilowatt Charlie" running a "clipped" AM rig driving a "sweet sixteen." Just answering ye query.

Hi Aaron,
it is some time that I read your messages, I have noticed that each time
that a problem is faced, you intervene telling that it is illegal.
Premised this, and premised that do you tell correct belongingses, but, want
you to explain why me speak in this way?
That is do I mean, ok that are these belongingses illegal, but are you
always that draughts out these matters, but, that one an Officer or a Watch
or a police officer or that other?
I tell you this because they from Germany often originate of the troubles on
the ch 24- 27,235 FM.
well this channel and this frequency has used from all the friends that do
packet, and, even from the European Community that has an own BBS always on
this channel.
You that know many belongingses and that, do you intervene often telling on
the legality of a behavior, like do you consider this "trouble" deriving
from Germany?
The trouble in practice, they are of the recordings of religious
celebrations, taking, it seem, to the inside of a Church; according to you
is it legal all this??
Legal E' that the German Authorities still have not intervened to repress
this "phenomenon"?
I attend a your answer.
Thank you.

Source record: 128659

From: aaronhvoobner@yahoo.com (Aaron H. Voobner)
FLORIDA POWER PLANTS THREATENED
Two young Pakistani immigrants from Hollywood, FL alegedly hatched a plan to attack South Florida power plants. Pakistani immigrants Imran Mandhai, 19, and Shueyb Mossa Jokhan, 24 of Hollywood were accused this spring of conspiring to bomb electrical transformers in Miami. Safraz Jehaludi, a 21-year old computer technician from Miramar, FL is being held on charges he sent the FBI anonymous e-mail messages threatening to blow up the White House and a Florida power plant.
RF POSES DANGER TO POWER GRID
In Docket 02-98 the FCC refused to consider allocating a low-frequency amateur band in the 160-190 kHz range, due to the liklihood that ham radio transmissions would disrupt PLC (power line carrier) systems widely used to switch electric power substations on and off line. The Commission took this action despite the fact that PLC operates under Part 15 of the rules and, by definition, is accorded no protection whatever from licesned stations transmitting on the same frequencies. The concern is that interference to PLC could result in widespread power outages. If the power grid is that vulnerable to inadvertent shutdown caused by interference from relatively low power amateur transmitters, how vulnerable is it to disruption by malevolent forces* who might set up low-frequency transmitters to deliberately jam PLC?

>*or illegal hi-power CB'ers? -Aaron- <

It stands to reason hammies would have the equipment to achieve this type melodrama you seek long before us lowly cbers.

That is the point Dave, while people will do things
that are illegal, that doesn't make them some form of
harden criminal. Yes there is a possibility of fines, yes
there is a possibility of jail time, but with the use of
thousands upon thousands of linears, how many of those
people have committed serious crimes? To equate using
a linear/export radio/freebanding with a serious crime is
the equation as speeding=murder IMHO.

From: oris@dirtball.com (Oris)
Most local cops don't even know cb exists anymore (nor care), let alone there is a statute allowing them to enforce certain aspects of it.

>Well that is a power play. The cops here in GA know. The cops in Franklin CO have amps for CB radio in their POVs as well as their police cruisers.<

Yea, some know and some may care.
In a large metro area or city, cb doesn't even exist as far as the law is concerned, unless it presents itself in a negative light.

> One or two of them have bad ass stations. Who is going to bust them? Once they find out you can bet they along with local governments are going to try and take control. I have already heard stories about so of the police in texas busting illegal CB stations right and left. <

Yea, I read the thread too, but that's all they are...stories. Take notice that when pressed for details, the origin of these stories clammed up.

As always, there are bound to be exceptions, and no doubt, we wil hear of them as they occur. Any sooner and it will be play-by-play.

>This will be based on the CB station operator. If he can get his station clean enough not to bother his neighbors TV's VCR's Radios and Telephones there should be no problem with the local police department. No madder what rule he or she breaks.<

I tend to agree with this, but clean stations can and do still leak RF. Scratch that....lemme put it this way....poorly designed consumer devices are still prone to receiving interference from the cleanest stations. Even if the burden IS on the owner of the cheap device, it doesn't stop them from initially lodging a complaint.

As far as ham radio is concerned, when they stop charging a fee for licensing is when the enforcement will suffer. The cash is the only reason any enforcement exists now.

>That statement is false the fee that they charge for testing is for the test itself. The VE can not be paid in any matter for what he or she is doing. Fees for test would not even put a dent in the FCC's budget <

I dunno. I don't believe the physical tests cost that much to reproduce...mere pennies is more like it. Considering they are using VOLUNTEER administrators, that is quite a tidy sum when all added up. I believe the FCC would definitely miss that cash cow, for the time

being.

Sooner or later, the hammie spectrum
will be just like cb..only the safety pissers and extreme violators will be problematic.

> Well I would welcome how 'bout it skip land or DX land. I think that that is more fun then calling CQ in real terms CQ is a morse code call. The proper voice term is seek you on my radio. Calling Seek You Calling Seek You. The proper end greeting is 73 not 73es the think there is 73es has creeped into the ham bands.<

Old habits die hard.

> THe language has changed over the years and as more people test in (you know that to test in now days isn't that difficult) the lingo and terminology will change. So I look forward to a time when Seek you skip land will be the status quo.<

You aren't alone. Hell, even many hammies are asking for ham radio to ease up..witness the no-code non-phenomenon.

Good man, I stand corrected, I meant to say "Delta Match"

> Why should a gamma be inefficient except for cheesy plumbing? It is
> electrically the same caper as tapping a loading coil. Educate me.

Another good point/question.

I don't have a good, smart, or intelligent answer.

But guys using the Interceptor 10K, or I-10K 5/8 Wavelength Ground Plane
Antenna have said that the I-10K has a stronger field strength signal
than their 4 element yagi beam antenna. Well I am flattered, but I don't
understand that myself.

One of the locals here has a Cush Craft 12 or 15 Meter Yagi Beam,
converted to work on 11 meters, local AM guys. He told me his beam was a

good antenna but can't believe that a ground plane (the I-10K) was just as strong. He dropped the tower and we looked over the beam. Seeing the Gamma Matching Assembly I said for him to put on a Beta or Hair-Pin Matching System for the driven element. I had some scrape antenna parts and pieces left over and showed him what to do.

The Gamma Match Rod, and the driven element where removed, and a Insulated and split driven element was installed, with the Beta Matching Assembly, and a Coax Balun. I will E-mail you the photos, or anyone else who is interested.

The Beam Antenna was tuned, all elements and spacing where the same and raised, the local said that now this modified beam was a approx. a S-Unit stronger than the Interceptor 10K, now that makes a little more sense.

But I have also received other reports of such field strength comparisons between small beams and the Interceptor 10K. All the reports that say the beam antenna is approx. the same field strength levels, is using a Gamma Matching System. M Squared, Hy-Gain, and Force 12 Antennas all use a Beta or Hair Pin Matching System. Maybe they know something?

Anyway I am ordering the material to build a Yagi Beam Antenna, and I am going to measure the difference between a Gamma and a Beta Matching Systems. Then I will be educated.

> The biggest reason more manufacturers do not use insulated elements is
> liability; the electrical code does like DC continuity so even UHF base
> verticals are folded unipoles. From a radio perspective this is a bit
> silly but it does keep static down on hf.

Because the Beta or Hair-Pin Rod is Neutral in the center, this usually is grounded to the Boom, as to allow the the driven element to be at DC Ground.
At least thats what the ARRL Antenna Book, shows and thats how I've done it.

> Something you might want to file for later is the idea of loading a tower
> etc, grounded tho it be, on 40 or 75. You need to run the cables inside

twistedhed@webtv.net (Twistedhed) wrote: Jerry O wrote:
Sometimes it is asserted that local governments aren't taking
advantage of the Local
Enforcement Statute. <

They aren't. Look at the states that were instrumental in pushing
through HR 2346.
Nothing from them concerning cb enforcement.

>How do you know this? Because you haven't seen anything on the web? LOL
<

I rarely bother with the web. I post here and use email, nothing more.

Just because they pass it doesn't mean they will enforce it.

>You hope. <

I couldn't care less what they do.
The DX has taken a slight nosedive and by the time it returns in full
swing another administration will be in charge and many present will
have died off due to strokes and cardiac attacks from high B/P. The
younger generation isn't nearly as anal. They are quite complacent.
Another reason hammie radio's future doesn't look so good. Xbox will win
hands down over PSK31 every time.

What appears to be happening is a "fail-safe" plan. IF a cop in, say
Montana, gets a compaint call concerning cb, the statute and local
legislation may or may not come into play. Which means they may or may
not escalate the case. The level of seriousness at which certain hammies
falsely claim a cb epidemic is not shared by the rest of the world. It's
practically a non-issue, proved by the redundant posting of such news
when something related does take place.

>Since you claim to have knowledge about CB compliants (and also how the
'rest of the world' feels about it), can you clarify a few things? How
many complaints related to CB interference does the FCC receive every
year?<

Not concerned with how many complaints the FCC receives, as a large
number turn out to be false and easily rectified. The confidence you
have always entrusted in me is not surprising, considering the number of
items you put forth that I have slayed with truth, but you need to
educate yourself and find this type info. on your own merits, not mine.
If you need tutoring, simply ask, but not in a thinly disguised attempt
of multiple inquisitions.

> How many compliants related to CB interference do local PD's receieve each year? How many complaints of 10 meter intruders has Riley receieved this year?
How about sharing your numbers with us? <

Source record: 128672

you know,im glad i dont live in a world where people blindly follow every earthly ordanance/law without "thought". it would truly be a scary place indeed. but since most of us are intelligent,people of reason,we do evaluate,and reach our own judgements about "laws". just think where we would be without this capacity?if we never questioned the implications/worth of some "laws",we would still be refusing service to blacks in restaurants,still letting some repressed civil servant tell us we cant do certain things in our own bedrooms......
thank god (and i mean that literally),that we have the capacity to question/disobey laws that we "judge" not worthy of our obedience.....does it mean that the guy who refused to support the "jim crow" laws would turn into a murderer. or if i decide to give the old lady head (in violation of sex laws) that im suddenly going to turn to robbing banks? i think not. those who are immature in their thinking only see things in this "black/white" mentality. its really a silly argument with no "real" merit or basis in human psychology. i would rather hear about the governments right to control the air waves,and why that is necessary...than this silly "psycho-babble" . just as there is a "degree" or "level" of criminality about some things...ie manslaughter,2nd degree murder,1st degree murder.....so there is a level of degree about a guy running a few watts,or the guy that runs 1000s of watts. and im sorry if it confronts your "un-yeilding" world view,but there is one hell of alot of difference in the "damage" done to society bythe guy who talks out of band.....and the guy who robs convience stores,or murders for hire.
think about it...if youre capable. elpasogunslinger

Gotta tip the hat to Bert on this one. Good radio. Also the SSB will be very valuable. The extra output may come in handy in a basic setup. I still love the RCI 2950's but a Grant is a fine rig.

Well, since this little punk thinks he can anonymously rat out people as
'fun', I thought that taking away the anonymity would be the first step.
The traceroute on his posting host is as follows:
(just posting the last 4 hops)

12 0.so-6-0-0.hr1.chi2.alter.net (152.63.73.33) 77.158 ms 78.412 ms
100.257 ms
13 195.atm3-0.dr3.det3.alter.net (152.63.65.185) 97.133 ms 101.183 ms
90.009 ms
14 tnt5.toledo.oh.da.uu.net (67.217.0.55) 93.903 ms 92.857 ms 108.074 ms
15 1cust82.tnt5.toledo.oh.da.uu.net (67.217.83.82) 262.229 ms 309.933 ms
281.783 ms

So this guy is in toledo ohio, and I could probably find out his account
information in a few minutes with a little digging.
Maybe some sort of retribution is in order...
People should learn to mind their own business.
Pyro.

P.S. This ain't CB... You can't anonymously fuck with people and think that
you can easily get away with it... You leave a trail a mile long with
everything you do.
I guess the next call is yours, but I recommend you get a real life before
your online life is made a living hell.
Cheers.

2770. Re: Sweep tubes to ceramic

Newsgroup: rec.radio.cb
Date: 2002-06-27 17:27:56 UTC
From: Skipp <skipp@pilotNOSPAMPLEASE.ucdavis.edu>
Message-ID: <affhus$8o$1@woodrow.ucdavis.edu>
Source record: 128676
Cross-posted to: rec.radio.cb,rec.radio.amateur.homebrew,rec.radio.swap

: In rec.radio.swap Uncle Peter <radioconnectionNO@cox.netspam> wrote:
: Well, Skippy, I posted links and some figures based on manufacturer's
: data from their websites and from their databooks.

Just as we expected you would, nothing that you actually measured. As Tom, myself and others mention... Svetlana often posts specs and technical information which is not complete or contains errors. Since you've done so much of this stuff, I expected to see your actual examples.

: I also stand by my
: posts, which you continually misquote. Read what I posted and try to
: comprehend. You're obviously trolling, since you have offered absolutely
: nothing which refutes what I originally said "they are better **ceramic**
: tubes than 4CX250s [for IMD performance] for amplifier use."

You tried to go off on a Triode diversion... It was clear in the original post, the Subject was about 4cx250 type tubes, a tetrode... a much different animal. Anyone can go through news group archives to see the original posts and your attempt to cover your behind with off topic poop.

: You asked
: for figures and data, other than from "obsolete radio amateur handbooks",
: and then you continue to argue that the data taken from the manufacturers'
: own websites is flawed, based on your opinions.

Yep, and I mention specific examples that are easily verified. You quote a web page for a web site that appears to be off the net...

: I suggest that YOU trying to provide some concrete facts, based on concrete
: technical that has been published. And sorry, not all external anode
: tetrodes have the same IMD performance despite the "size of their
: anodes". I'm still waiting for you to quote the FCC regulations that
: specify transmitter IMD performance, which I suposedly alluded to.
: 73
: Petey k1zjh

Back to Square One Peetie Pie... The guy was trying to figure out if using 4cx250 tubes would be practical... as he had more than a few extra NOS tubes laying around.

Someone piped up without supporting evidence, the 4cx250 has terible or very poor IMD preformance in Linear Amplifier service. The tubes should not be considered in Linear Operation, nor should the guy use the spare tubes he has in a possible conversion project.

I replied that that claim is not justified, the 4cx250b works well in Linear Service if a builder does the proper homework first.

You pipe in with all kinds of poop, then try to go off topic with ceramic triodes and diversions that are way off the original post. Now you back pedal without providing anything but an old Svetlana web page as your source information...

You ever build a linear 4cx250b amplifier Peetie..?

Anyway, an example of an actual (and current) RF amplifier using the 4cx250b in Linear service can be found at the CTI website, a Florida Company now making said.

Other readers wishing to look, check out www.cticom.com or www.cti.comm.com if the first url doesn't work. A www.google.com search should also find CTI without grief.

For those Boobner types that want to read FCC Regs regarding transmitter and amplifier requirements.

www.fcc.gov

They don't require your real name, so even the fake'o Aarron Voobner guy can check in with a browser.

that's pretty much it for now...

I should also say, to the original poster of this thread, you CAN put the
amp back on ebay, only put it in the Ham Radio Equipment section, and put
the FCC notice saying it's 'illegal' to use on 11m. I see 'gray area' amps
always being sold in that section with the disclaimer.
If you put it in the CB section, that's why it got canned, not just from
this little dickhead's quest to rid the world of all linear amplifiers.
I would also send an e-mail to ebay and yahoo complaining of their actions.
Your amplifier is legal for use in the band you say it is.
Cheers.
Pyro.

I didn't intend for my first post to sound so 'threatening' (I just re-read it)... I was just trying to let the postee know that even though they're using a generic 'yahoo.com' email address, they're in no way 'anonymous' on the internet. Anybody can find out who you are with two clicks on their computer and a copy/paste. It's not like CB where you can mess with the 'keyclowns' and they'll probably never find you.
I wish newsgroups had an 'edit' function. :)
Pyro.

OK, so people decide which laws to break based on some sort of reasoning process.

>I'd like to offer a more relevant analogy. How about a guy who's

>running a few hundred would cause harmful interference or perhaps the
>risk is too great? In any case, joe's not just "following orders,"
>he's reasoning it through.

This reasoning process has provided two possibilities: first, the high power might cause harmful interference. Now is that a concern to keep his own ass out of a sling, or is that a genuine concern for safety or courtesy? Is the concern for himself or others?

Second, by saying "the risk is too great", I must assume that this 'risk' is the possibility of getting caught.

So now the question becomes, if a law is going to be obeyed, is it out of fear of getting caught? or out of respect for the rights of others?

>Now there are those who say that if you're willing to break even so
>much as one law, that you're morally or ethically corrupt.

I'm not one of those people, but a few exist I'm sure.

> This, of

All is not shades of grey, either. (Hey, didn't the Monkee's do a song called "Shades of Grey"?)

> I'm not defending those who run excessive power
>or freeband. I'm just pointing out that not all who've operated
>"illegally" need not be immediately doomed to eternal damnation. Joe
>Shmoe running at 17 to 25 watts P.E.P. on the legal 40 is not equal to
>"Kilowatt Charlie" running a "clipped" AM rig driving a "sweet
>sixteen." Just answering ye query.

It's clear that some people will violate the law irrespective of the rights of others, and there is no way to convince them otherwise (other than fines or jail time). Some people, OTOH, are simply unaware of the damage they could be doing even by operating what they think is safe or insignificant power. That's why I mentioned that Pride 100 in the other post. It could have just as easily oscillated on 121.5MHz, or some other freq that could have caused some serious problems. If this person had been among the ham community, it is more likely he would have used a better amp, had someone tell him that his equipment was malfunctioning, or at least used a LP filter (the amp still would have had good emmissions under oscillation, but a reduction of power on the meter would have sent up a flag -- the reality was that all he noticed was a decline in talk-power and kept using it for two months until he brought it into the shop!).

Or like Dave's example of the explosives factory: they simply may not know that even the fumes from certian chemicals can condense on the walls to form an explosive substance, or that the vapors from nitroglycerin can cause severe headaches. However, if they were in compliance with the law, the MDS sheets would be available and such problems could be avoided.

So while people may consider a law to be 'insignificant', there might just be a -very- significant reason it was added to the list. For those people that are unaware of the problems caused by illegal operation, I try to make that information available. As for the trogs that have no respect for anyone else, I show no respect to them.

Just a quick note - a licensed electrician is sufficient for work on 120/240 volt single phase circuits such as in your house. A licensed MASTER electrician is required for polyphase circuits. Anyone for a 120/208 3 phase 200 amp circuit to their house would need a licensed master electrician (assuming that 3 phase is available in your area and that your utility would even run it to your house). The warning about receiving instructions from anyone in this newsgroup is, however, well taken.

So, advertise the unit as an untested amplifier parts source or project to rebuild into legal service or sell as an export amplifier.

Your use of the wrong descriptive labels is what got you kicked off all the auction sites. Ahhh...'daaahh...!

The amplifier can be legally used in the right location(s).... and can be rebuilt into many other circuit layouts...

Change a few coils and you have an 80 meter hf amplifier... remove the right coils and you have a partial completed amplifier for mono band 160 through 15 meter ham band operation.
Mention that ARRL Handbooks from the 70's and 80's have text on similar Amateur Sweep tube Amplifiers...

A little common sense goes a long way...

cheers
skipp

That's probably why there are so many posts here when most of the US
is asleep... wait a sec, there -aren't- very many posts in the middle
of the night, and there are very few posts from outside the US!
Hmmm.... And are the ham newsgroups restricted to the US? Don't other
countries have amateur services?

> and amplifier operation
>on 26-54 Mhz is legal in some locations and class of service.

Even in the US. One of them is the amateur service. Do any of those
other services include CB radio?

Yes it does. He could advertise it in an amateur newsgroup or forum as
junk (not far from the truth) and say that he will only sell to a
licensed amateur. I don't think anyone would have a problem with that.

oh nooooooooooooooooooo, not the Jeep wave please. hehe. I don't get waves cause we all know that Cherokees are not Jeeps. In fact the other night I noticed my Cherokee has an 8 slot grill not 7 like Jeeps are trademarked for. I do get out on the trails at least once every other month and I love it! I can't wait to get the lift on and some decent bumpers. Don't get to do any really challenging trails in a stock Cherokee but still get to see some awe inspiring bits of nature you couldn't get to in your sedan or run of the mill "Soccer Mom SUV"

Well, I got zapped by a 200 watt transmitter right off the coax
because some idiot defeated the lockout. I lost part of the use of one
finger because of that one.

But I can't even come close to a friend of mine: She stepped out of
the shower, and while walking between the fridge and the stove she put
her hands on both. The fridge was wired wrong -- the ground and hot
were reversed. She took full AC line voltage across the arms and chest
soaking wet! She's still alive, BTW, but I don't know how. When I
tested it, I nuked the meter and spot-welded the probe to the fridge
door handle.

And both incidents happened because someone didn't have the
responsibility to obey one of those 'insignificant' little laws.

>Despite admitting to having hurt my self really bad before I would like to
>comment that this really got my goat:
>
>"I would be careful of following any instructions you receive in this
>newsgroup from amateur electricians."

Personally, I would be very cautious of ANY information received over
the internet. It's the reader's responsibility to verify anything they
read or learn with authoritative references. The local public library
is a very good place to start.

>I think I've been around long enough to be well past the "amateur" stage as
>you call it. Use words like Apprentice, Journeymen, Master Licensed
>Electrician, Electrician, Helper. There is no such thing as an amateur
>electrician. Amateurs get dead or fired real quick. Would you ask for advise
>from a hardware store Aaron? I know at least Home Depot likes to claim you
>can ask them for advise. I'd be more afraid of Home Depot than an "amateur
>electrician"

I don't expect people to rely upon anything I say. On the contrary, I encourage them to verify the facts for themselves, simply because I could be wrong (...hey, it could happen!).

I feel long winded right now...

Consolidated Electrical Distributors they are all up and down Cali. Don't know if they are nation wide or not. I know Rexel Pacific is a very big out fit, Nation wide, and they get me real good deals. I hate Platt and Graybar charged me 5 bucks for a 1" romex connector once. Hell I could get that at Home Depot for a buck. Needless to say we don't have an account with Graybar or Platt anymore, they give us shitty prices. CED gives us OK prices but Pacific has the best and they put up with a lot of crap from us. I know when I worked in Southern Cali we got awesome deals from CED and they delivered once a week no charge. Was like an 1 1/2 drive to our small town but just like clock work free delivery every Wednesday at 10AM.

Hell Pacific gave me 15% off ON TOP of the deal we already have the day after fathers day. Some numb nutz pried open all of the bins on my truck on fathers day at a Home Depot parking lot. Not a single fucking spot open, that's how many people were there and yet no one saw this fucker make off with $3000 worth of my fucking hand tools. "Happy Fathers day dad, look what I stole for you." Putz, makes me wanna swing pipe benders again, but life's too short and complicated to waste my time rotting in prison over some tools. Called Pacific on Monday after, to place an order for parts, and first words outta Kyle's mouth were "What the hells wrong with you? Sounds like some one kicked you in the balls." Had to explain to him how instead of just kicking me they castrated me, hard to work with out tools

Very good advice Aaron. One mistake can be very painful if not deadly. Ever get wrapped up in a 277V lighting feed whilst standing on top of a 14 foot latter some where above a t-bar ceiling in the middle of a crowded Sporting Goods store? Let me tell you nothing hurts more then surviving, waking up on the floor with a really nasty bump on your head, burn on your arm and a crowd of people; All eyes on your company shirt. You can just see them mentally crossing your company off of the "Call them for work" list. Even Masters fall prey to the Evil Bitch Goddess.

Despite admitting to having hurt my self really bad before I would like to comment that this really got my goat:

"I would be careful of following any instructions you receive in this newsgroup from amateur electricians."

I think I've been around long enough to be well past the "amateur" stage as you call it. Use words like Apprentice, Journeymen, Master Licensed Electrician, Electrician, Helper. There is no such thing as an amateur electrician. Amateurs get dead or fired real quick. Would you ask for advise from a hardware store Aaron? I know at least Home Depot likes to claim you can ask them for advise. I'd be more afraid of Home Depot than an "amateur electrician"

Helo Bert:

Yeah the good stuff is expensive, they went for close to 2 grand new,
and the tube lasts for ever almost, it you treat it right.

I've seen there Spectrial Output Measurements, the second and third
Harmonics are something like 40 to 50 dB below the carrier, very clean.

It is far more amp than I need or want considering I pump 200 PEP about 125 CW now and that will serve my dubious purposes forever. It is, however, a good example of how power can cost. If I couldn't whomp up something for a lot less than $843 that would meet decent tech specs at 200 PEP I will turn in my smoldering iron. Granted, the thing has resale value and probably will for a lot of years. So my estate and heirs suffer, BFD.

But the Argo V has me thinking of Space the Final Frontier or at least something I haven't done before. Before we talk amps I really would like to have the rig first or at least see one.

This is a nice piece of hardware, tho.

Bionic Klutz

Been there, just gotta' love it.

I saw a forsale ad in the paper that said lowered Jeep. I called and
asked if he could put it back to stock. He said, "Why?" I told him it
wasn't a Jeep anymore and the Chrysler folks were coming after him
for trademark infringement. The silence was deafening...click.

I worked for a year and a half as a project manager for
one of their subsidiaries. I know exactly what you are talking
about when you say "10-3 Romex" and all the other stuff.
I remember when I first started, I worked the warehouse
for a month to familiarize with the operation. Nothing like
stacking the 4" 90's galvanized elbows, oh what fun or a
run of 04 cable on to a wheel

Why should they rat out someone else? It is none of their business.
There are more important crimes to worry about than someone taking you
hand tools...like murder, rape, drugs, and genocide. Why should the
thief obey any laws when Enron and the goverment are getting away with
all kinds of crimes? Even the President lied. What right do you have
to complain about a lesser crime? You should mind your own business.
You weren't harmed by this "crime", you were only inconvenienced. It's
not like a murder or rape or drug OD happened. Do you always complain
about petty crimes in NG's? Sheesh. Next you'll be wearing a tin badge
and acting as "Parking Lot Police" at Home Depot....

The rec.amateur newsgroups are also worldwide, Skipp. And "amplifier
operation
on 26-54 Mhz " is not legal for any "CB class" service in -any- part
of the world, so that means that the ad is not appropriate for a "CB"
newsgroup.

>And you NEVER break any,right Barney?

Think you missed the entire point of Dave's post. He's saying that people DO break laws, but they are selective about it, that courtesy, respect and common sense have much more to do with why someone keeps/breaks the law than fear of retribution and punishment.
He also said, quite rightly, that not everyone who breaks one type of law should be considered potential major criminals.
Go back and read his posts again before opening the gates of cynicism.
Linus

>retribution and punishment.

I will agree that courtesy, respect and common sense are factors in the decisions of why some people obey the law, as well as fear of retribution and punishment. But I can't make any conclusions as to which is more prevalent.

I don't agree that these same values are used very often when someone chooses to break a law. Violating a law usually impedes in some way upon the right or rights of one or more people, or puts other people at an increased risk of injury or harm. That's not using "courtesy, respect and common sense". Laws are broken with disregard to those values. You might say that using an amp is ok as long as it doesn't cause interference to the neighbors, but its use clogs the channel (and usually a few others) over quite a bit of real-estate that could be used, or -is- being used, by others. That's neither courteous nor respectful.

>He also said, quite rightly, that not everyone who breaks one type of law
>should be considered potential major criminals.

I agree. There are some that will limit their actions to nothing more than a minor nuisance, while the sole purpose in life of others is to step on any and all mudducks, day or night. Then there are the serious criminals, such as murderers, rapists, child molesters, TV preachers, politicians and Enron executives.

> Yeah but Frank, that could kill you, where will
>using a 100 watt mobile amp kill someone?

Anything is possible, but not always probable. 200 watts sure did a number on my finger (my middle finger -- those must have been 'bird' watts). What if poor manufacturing quality (because it was manufactured illegally) caused a short which started a fire? What if that Pride 100 had been oscillating on an aircraft freq when a plane is trying to land IFR? What if the exciter doesn't filter the IF very well and it gets amplified by the amp? You are going to be heard on just about every radio within a certain range. What if the radio was peaked-and-tweaked to the point of eliminating the LP filter (not uncommon)? Then you are going to have mixing products all the way up the spectrum and maybe into nearby medical equipment or emergency communication. Are you sure that little old lady across the street isn't on a heart monitor?

My big question is, how many times has something happened because of RFI but went undetected? New electronic technologies are coming out every day, many in critical life-saving or emergency systems, but just how many are protected from IO RFI? Not many, especially since certain freqs are not supposed to have high-power signals and are therefore the equipment may not be designed to protect against them.

So how much damage can 100 watts do? I -could- do quite a bit of damage if used in the wrong place at the wrong time under the wrong circumstances, etc. Murphy's law dictates that such things will

happen. The real question is if the operator insists on increasing the odds that it will happen because of him.

Now Aaron, that's illegal. How dare you even suggest that
someone break the law after all the BS you've spewed in here?

2832. Re: Midland 77-250a problems

Newsgroup: rec.radio.cb
Date: 2002-06-28 04:15:33 UTC
From: Me <db7500@pacbell.net.nospam>
Message-ID: <B94130F5.1183%db7500@pacbell.net.nospam>
Source record: 128738

Actually, most microphones are a vital connection in the CB, and removing it will make the sound go off. They're wired like that. The reason you get no hiss when you unplug it is the circuit is effectively 'broken' and no sound will reach the speaker (since there's nothing being received).
The 'hiss' is just the receive circuitry. If you turn up the squelch, it should go away.
It sounds like you bought a burnt CB, or you don't have an antenna hooked up. If you're trying to key up without the antenna, you're doing bad, bad things to the finals in your radio.
Some units won't transmit if they have a high SWR (and not having an antenna hooked up gives you 100:1 SWR just about) and that could be what you're experiencing. The click you hear is the transmit relay trying to get a signal out.

CB's on ebay (or other auction places) are really a crapshoot. That's the problem when people crack the case and break out the 'golden screwdriver'. Some people try to out-engineer the people that designed the unit, which is pretty amazing if you ask me. Of course, they usually stress a part of the circuitry that wasn't intended to be fooled with, and end up burning part of the radio.

If you buy CB's at auction, I find that it's wise to avoid those with the phrases 'I don't know much about this', or 'Unable to test'.
Usually those people are taking you for a ride.
The first CB I bought through ebay was a President Washington from a person that used BOTH those phrases (boy was I stupid) but heck, it came with a mint condition 'newest model' Silver Eagle, plus a frequency counter.
The second Washington I bought was from an auctioner that gave a no questions asked, money-back guarantee.

Guess which CB worked?

The first one I bought had fried finals (of course there's no CB shop within 100 miles of me) so I had to buy the second one. I plan on fixing the first Washington when I get the time and transistors, but I'd be S.O.L. If I only had the money for the first CB.
Anyway, if you can provide a little more information, maybe we can make a diagnosis.
Cheers.
Pyro.

Workman Electronics markets what is supposed to be a direct knock-off of the
old Starduster's. They even use the original Antenna Specialists model
number as their model number i.e. M-400. Sean

Well then what's the problem with your mailbox? I sent you a wav of my finest triple cadenza fingerwork and al you can come up with in return is a lame excuse that your webtv account is so botched that it can't receive email. Now if that isn't disappointing, I don't know what is. Maybe I ought to drive down to Oldsmar and give a free concert in the park. I bet you'd show up with bells on.

> Why did I mention "Nad? Oh, it may have been the 8 or 9 posts he called

I figured as much. That's why I sniped my shit at the last second. I'd never live it down if I let you get the best of me, hehe. There is another group of wackos I belong to. We are the last remaining bozos who cling to what was once a great radio station. Was called Luxuria Music. send me that wav you have of you playing Aaron. I'm serious you would be an instant star. These guys eat this kind of stuff up. I'm also curious to hear you play. If you decide to send me your wav and it bounces you might want to consider removing the obvious. :-P

>>>Think you missed the entire point of Dave's post.
>>
>Really? Try reading it.

I read it, and the previous posts he submitted, (which you apparently didn't) and taking them together his position is VERY clear, that some people are selective in the laws they ignore. Right or wrong.
He never said he did or didn't break any laws, regardless of your remark about him 'never breaking any', and he was being satirical in presenting the examples you seem so bent out of shape about.

>You got all of that,from this?

If you'll notice, I wrote:

>> Go back and read his posts

Not singular, but all of his previous posts in the thread.
Your smarmy remark to him was based on one post, and if you'd taken the time to read what he wrote in all the others, you'd realize that he was saying quite the opposite of what you were razzing him about. Dave's position is quite clear to me, and I agree with it's sentiment. People can be very selective in the laws they ignore, and none are necessarily potential criminals in any other respect. He was not telling anyone to drive on the sidewalk, he was using satire to present an extreme analogy, such as has been thrown at him by Voobner and those who cannot believe that a person can break a minor rule without having to break major rules.
As I said before, read the posts before opening the gates of cynicism.
Linus

What are you ratting out? This is a commercially available radio approved
for export.It is not being offered for sale or auction here. Just the facts.
I think you spend to much time putting your phone number on bathroom stalls
or maybe it is to much time answering the calls. Tossed your salad lately?

Dennis, Aaron's best put in the kilfile and ignored. These are open forums and everyone has the right to participate in a thread or not. Too many people are wasting to much time responding to these @$$O's and the topics get distorted. So I say KilFile them and move on!

Hi, I have just bought one of these radio's very happy with it over-all, apart from one thing...

The breakthrogh from other channels - Ie, if I am listening on 27.695, and someone is transmitting on 27.685, I can almost hear what they are saying on 27.695.

Can anyone else confirm this is a usual thing on a MAgnum, or does it need to go back for repair?

I have checked it with the dealer and they say this is normal.

HHhmmmm

Like I give a crap. You know how powerless you are to stop the
Anti-boys!
You are not educating anyone. There are several ways I could have
chosen to post. You would come up with a different trace on all of
them. In any case, if you make threats you get spanked for it, junior.
Wait and see what yer ISP has to say to you.

You did EXACTLY what we thought you would do: got on here and whined
and threatened and cussed. My posting name says it all: AntiKeyclowns
rule the NG. We rule you as well. You are so obedient you performed as
we desired before you were even commanded. I would give you a dog
biscuit, but I would not want to shortchange any dogs.

Think about this sequence of events: 1. You post something illegal to
sell.
2. You get ratted out and spanked. 3. You whine and threaten people
because you were ratted out. 4. You get spanked again.
A normal person would conclude that if you had not done something
illegal in the 1st place you would not have been spanked. A criminal
and immature mind blames the honest people for helping enforce the
law. Same mentality as a gangbanger threatening witnesses to a drive
by shooting. You have proven beyond all doubt that you deserve to be
spanked, so why didnt ya just take it like a man?
Answer: You are not mature enough to do so and you have a criminal
mentality. Proven totally by your posts here.
As to making my "online life a living hell": Do your worst, dummy. You
do not impress me at all. Chukkee is smarter than you are and he is
waaaaaay down the IQ chain.

I know nothing about the radio of which you speak. But I do know
radio. Two things could be happening:

1. The selectivity of the radio is very poor. For each channel you
should have a bandwidth of +- 3kHz, and no more. If you are receiving
audio from the adjacent channel, then its possible that the radio's
selectivity sucks.

2. The person on 27.685 is either using an amp or has his radio
"peaked-and-tweaked". The problem with both is that it will cause his
signal to 'splatter' across a very wide bandwidth, maybe even several
channels above and below his selected channel. This problem is much
more common than having a receiver with poor selectivity.

Solution for both cases: take one less trip to your local fast-food
joint and get a license.

>

If you are on 27.685, isn't the breakthrough more likely to be coming from
someone on 27.69125?

If they are close (few hundred yards) then you'll find this quite normal.
Don't worry too much about it though, you should hear an FT1000MP Mk5 on FM
mode receive. Not breakthrough, more you can clearly hear two conversations
10kHz apart on 10m FM like two people talking in the same room. Selectivity
is much much better on SSB though. FM is very much an afterthought for these
sets.

If you fancy getting a soldering iron out, find the 10.7MHz IF strip and put
a crystal filter in, but beware the more poles to the filter the more your
receive will be reduced.

Aaron will never be killfiled by many of the keyclowns because he
speaks the truth, and truth is what most of them fear. IOW, anyone
sitting on the fence is reading both sides of any argument, and can
tell the difference between keyclown BS and the truth. That's why the
keyclowns must keep shoveling more and more BS to try and cover up the
truth as revealed by Voobner (and others).

And why would they do that? The obvious reason is that illegal
operators depend upon each other to validate their illegal activities.
Just like any other form of organized crime (or religion), it is
social support that justifies their behavior. Things such as "logic"
and "facts" diminish the persuasive effects of such anti-social
reinforcement, and must therefore be contradicted.

Another reason is that some of them make a lot of money scamming
people by convincing them to buy illegal amps and "export" radios.
Opposition to these people has led to many, many threats of violence
against Voobner, myself, and other defenders of honorable intentions.
But many of us don't scare very easily, and will continue to educate
people about the reality of radio communication (life is not an RF
drag race).

Killfile Voobner? Ain't gonna happen. Deal with it.

>I don't know why you focus in on "Lelnad" as the source of your
troubles, Twist. <

I have no troubles, certainly none ng originated.
>Well then what's the problem with your mailbox?<

Any problem must originate with you.
No problem with my mailbox, YOU just can't get into it. If you would
have behaved yourself, you wouldn't be here whining that you can't get
into it.

> I sent you a wav of my finest triple cadenza fingerwork and al you can
come up with in return is a lame excuse that your webtv account is so
botched that it can't receive email. <

.
It's idiot-proofed so I guess you're outta luck.

>Now if that isn't disappointing, I don't know what is. Maybe I ought to
drive down to Oldsmar and give a free concert in the park. I bet you'd
show up with bells on. <

Which park?

Why did I mention "Nad? Oh, it may have been the 8 or 9 posts he called
out to me in. You're missing posts again...

>I am. I see no posts to you from anyone named 'Nad.<

Only because I am so much smarter than you.

> Matter of fact I see no posts to you from anyone in here AT ALL. It's
just you and me, Twist. Let's face it, I am your only correspondent, so
you'd best be civil to me or I'll stop replying. <

You really should try webtv since you miss so many posts.

>Your status as the news group punch clown is your own fault and the
result of the foolish things you post.<

But those "foolish" things manage to control your every move and are responsible for you losing several anonymous, free accesses to the group, and 2 that weren't so free. My foolishness is my world, showing your concern has always been your greatest weakness, next to failure.

>Oh malarkey. You're babbling about something you cooked up in that french-fried brainpan of yours and I haven't a clue what you're talking about.<

Only because you're challenged in the gray matter.

> How could I get booted off any ISP's for merely exchanging witticisms with you and the other ,um, geniuses in here?<

Simple, your lack of control which always leads to you violating your TOS. Like shooting chipmunks with the .06.......

>Speaking of foolish things, what do you tell your young ones about that jock strap on the wall? <

What kind of person sits around thinking of my underwear as a trophy?

>To be honest, I figured you'd have the answer to that one. After all, according to NG legend, you received the aformentioned undergarment in the mail and ensconced it in a trophy position. If this isn't true then maybe you ought to explain why. <

WHY you happen to be obsessesed with such matter is immaterial. If you are truly seeking answers to this, a doctor may help you, but confused sexual preferences and desires has now been linked to a gene, so it more than likely is hereditary. Stands to reason.

>What the ng does know, is that it certainly would be understandable if you were female. <

>Ugh. You wish I were female? Now THAT is an admittance one often doesn't hear in a NG. <

Focus the glasses and wipe the, um, substances from your hand and lap and reread what you failed to in a single attempt.
One may understand your fetish with my underwear if you were to be female. However, the rather bizarre affection you demonstrate for same sex intimacies is not something a healthy, heterosexual dwells on.

>You need to talk with Mark Beck aka Landshark about these, er, desires.<

Couple that with your delusions of being surrounded by homosexuals and you're a very easy read.

>You tell them that one day that they will get one of their own too?<

WHo are "them"?

>Your chillun's? <

See what you get for assuming...gee, this is fun.

>Do they ask if they can play with daddy's framed jock strap, or has
the tiny one taken it to school for show and tell? 8-)) -Aaron- <<

    "Daddy" amuses you as much as underwear. How drool.

>Oh stop being such a sourpuss.
-A<

It's ok. We understand what attracts you.
You gonna holler at me this weekend? You know where to find me.....I
have a CB linear lent to me for the summer and I wanna see what kinda
bird watts it's gonna do...

common than having a receiver with poor selectivity.
Solution for both cases: take one less trip to your local fast-food
joint and get a license.<

This is poor advice. A license will not allow you to talk on 27.685.
Skip the license if this is where you prefer to do your skip talking.
Check your clarifier(s). Make certain they are aligned and in concert
with each other at 12:00. This can be confirmed with a frequency counter
(not a readout).

Yea, I read the thread too, but that's all they are...stories. Take
notice that when pressed for details, the origin of these stories
clammed up.

>Sorta like you, Twist.<

Well, we can discuss any other subject you wish, but certain ones just
seem to set you off and light your dander. Muenzler's lies are in no way
diminished because of anything you attempt to put forth, and any hammie
that needs you at their defense speaks volumes.
Look, he lied and got called on it, no biggy, happens to you on a
regular basis, but we still tolerate you, right? :)
His first mistake was calling himself an "Official FCC observer", which
he has since dropped the letters "FCC" when referring to such.
Nevertheless, it reeks of someone that needs a power trip, such as
yourself.

> You specified that a certain town has done nothing with HR2346. But
when I press you for details....you clam up. What's the problem? Your
claim would be very easy for you to prove. Just give us the proof. The
name of the town official from whom you got your information would be
acceptable.
-A<

It matters not a bit to me what you consider acceptable, Frank. The fact
that it is only yourself whining about this tells the tale. A simple
phone call will yield the same.
You shouldn't ask for things you are unable to provide yourself, Frank.
It's the same reason you gather no respect.

>Assumption #1: It is not my job to enforce the law. Response: It is my
legal right, moral responsibility, and independant choice to enforce any
law I see fit to enforce. But I am not enforcing -- or breaking -- any
law by posting in this newsgroup. Assumption #2: I get upset about the
law being broken. Response: I do not get upset about any CB law being
broken. On the contrary, the more RF pirates that break the law the
better. Assumption #3: The breaking of the law does not directly harm
me, a friend, or a loved one.
Response: RF pirates affect me directly in my work.
.....Frank Gilliland (Sparky@cet.com)<

I believe the unanswered question posed to you long ago was: "How do RF
pirates affect your work, Frank?"

While all "broadband" radios will experience a certain amount of "bleedover", these radios are of poorer design and build quality. Much of the "splatter" that you experience is due to other nearby stations that are creating a lot of IMD (intermodulation distortion). IMD is what is responsible for what we know as "bleedover" or "in-band splatter" whereas THD or "harmonics" are responsible for creating TVI and RFI based problems.

The fact that this radio is more susceptible to such a problem (along with front end overload) may have you looking for another radio relatively shortly. This is especially true if you live in a congested area with a lot of radio operators nearby.

Keep in mind that radios that are designed to operate over a narrower bandwidth will typically make use of higher Q filters and / or more filtering to begin with. These would be less susceptible to bleedover. Then again, these rigs will also be harder to expand and cover the expanded operating range with poorer sensitivity and lower power output.

Everything in electronics is a trade-off at this point in time. Technology does not exist to make a perfect "anything". As such, one has to weigh the variables in terms of features and performance that a product offers and make their decisions based on what they want and are willing to sacrifice.

Yes, this is an attractive radio. While i wish it had a few more features, it appears to offer most of what many operators are looking for. I don't know the time frame as to when this will be out, but i would expect it relatively soon. As far as power output goes, i would not expect it to compete with the T48, which is REALLY impressive. The increased efficiency of SSB operation that the T93 will allow that the T48 does not offer might more than make up for that though. Then again, i have always been of the belief that if you can't do what you want to do with a well set-up barefoot radio, you probably need a better antenna system. Only under adverse atmospheric conditions, "pile-up's" or competition should any type of further "help" be necessary.

As far as pricing goes, i would expect similar retail prices to what the 2970 / 6900 / 6300 Turbo sell for. Sean

UK CB is on FM, in theory 2 kHz deviation, in theory with a brickwall i.f. filter. The idea is to prevent just what is happening to this man.

Yes, just being close will cause this but so will someone trying to be 'louder' and reefing the deviation control or reacting to a limiter like an American or Dracula to a garlicwood cross (same thing). And like the American nincompoops they lose 'talk power' as well.

This is very similar to what went on on the ham bands in the U.S. some years ago. A Regency was a 'one-crystal' receiver: no matter what the crystal was for one heard the entire band.

So American experience with Antique Modulation is not likely to be helpful, gang.

But it does show that both sides of the salty pond have their share of bozos.

Although a lot of flames have gone around, I'd like you to check out the following site: http://www.infoshop.org/fccthugs.html - then I would pose the following question: why don't we petition the government to eliminate the FCC - along with television stations, radio stations, and cell phones. Yes, we'll keep the fire departement frequencies and - just maybe - the police frequencies. Then we'll all have a TON of bands to play with.

Your thoughts? (this is tongue-in-cheek; I think the gang on that site are NUTZ)

73 from Rochester, NY
Jim

Well whats he doing in the Hammie NG's? I mean hams who are in the CB NG get
asked this question quite often.
He likes to Freeband and who knows what other freqs he takes his rig?
I think he is a closet Ham but ill bet he thinks being a Ham then people
wouldn' consider him cool any longer.

I am Aaron Voobner and I do exist. The only reason you're steering the
conversation into a discussion of names is because you realize that
FCC rule 2.815(b) is very specific about the sale and marketing of RF
amplifiers (such as the one offered for sale at the beginning of this
thread). No matter how much smoke screen you lay down, you can't
wiggle away from that fact.

>
> :> possibly... because this news group is world wide, and amplifier

What has 54 mhz have to do with the illegal 10 meter amplifier
advertised at the start of this thread? Not much. Except maybe a
desperate ploy to wiggle away from S2.815(b), which states:

FCC rule 2.815(b): After APR 27, 1978, no person shall manufacture,
sell or lease, offer for sale or lease (including advertising for sale
or lease), or import, ship, or distribute for the purpose of selling
or leasing or offering for sale or lease, any external radio frequency

amplifier or amplifier kit capable of operation on any frequency or
frequencies between 24 and 35 MHz.

> I have seen and serviced many such radio services in the past.

Good for you. How does that apply to FCC rule 2.815(b)?

> Five
> minutes at the FCC web page will list such available services.
>
> "CB" is only a label, also used to describe the original GMRS UHF service
> as "Class A CB" and other "classes of service" You never seem to have

This thread is not specifically concerning GMRS UHF or any other
classes of service. It concerns an RF amplifier designed for operation
between 24 and 35 mhz that is being offered for sale in contravention
of FCC rule 2.815(b).

>
> :>So, advertise the unit as an untested amplifier parts

If you adjust the squelch, there is a very faint change in the hiss. I
can only hear this hiss if I put my ear right up to the speaker in a
quiet room. It is not the normal static sound.

> It sounds like you bought a burnt CB, or you don't have an antenna hooked

Actually it is a chook-chook sound coming from the speaker. Similar to
a spark genrated noise.

>

A lot depends on one's theory of government if indeed one theory would fit it all. The prevailing Western theory is that everything is owned by somebody but there are numerous exceptions to this including Marine law.

There is a classic problem in Political Economy, later turned into a book about 1957, called the Problem of the Commons (the book was the Tragedy of the Commons) that had to do with village commons and the sheep that grazed thereupon. When the sheep were more or less housepets it worked but when mills and railroads provided a market for sheep outside the village all hell broke loose. It was in the short run profitable to overgraze the commons which in the long run left the commons looking like the Gobi and one great mass of starving sheep. The only real winner was the village cynic who sold his herd to his neighbors and retired to the nearest large city. Any resemblence to 11 meters is in the eye of the beholder.

That the airwaves are somehow the commons seems to be their theory and ultimately the same effect will occur as it did until radio was shut down and transferred to the Navy in 1917. When we got the Navy out of it in 1921 (yes, gangaroonies, the US was very close to seig heil in that period) the Commerce Department under Herbert Hoover took over regulation but probably illegally to keep the chaos to a ladylike belch. The Federal Radio Act of 1927 and the Federal Radio Commission was probably the first real and legal regulator we had. At one time, anyone who could prove he was on the air prior to shutdown got an Extra automatically in recognition of a property right but any applicant did have to waive claim to a specific freq. The FRC became the FCC when Ma Bell got tired of the old Interstate Commerce Commission in 1934. Given that it was said that it was good the Overland Stage had died before the ICC was born or they would

have preserved it, Ma Bell was likely right.

It is a simple economic fact that no sane human being is going to put a lot of money or sweat into 'property' (in law, a bundle of enforceable rights to something) without having title that he can look to the judiciary to enforce. So operations on the commons are going to be cheap and cheesy by nature. Again, any resemblence to 11 meters is in the eye of the beholder.

If the principle of open access is the over-riding ethic, you can't very well fence your sheep. So I am not going to put up a decent FM station where someone is on my freq in an hour. This is, by the way, why a lot of third-world countries are third-world countries. If I have a plot the village elder can take away and I cannot borrow against a title where do I get the equipment to farm it by modern standards? Robert Mugabe is another stage along the way but any number of countries are no better off. So while the principle sounds noble to some, the reality is Tobacco Road.

Having said that, they have an interesting point. What does one do when the spectrum is already Tobacco Road? The world needs one more Clear-Channel Communications outlet about like Custer needed more Indians. My FM does not know that the band goes above 92. The pirates that show up in the 6.9 range are one hell of a lot more entertaining than the latest collaboration between J Lo and her audio engineer. Giving the lady a Grammy would be like Olympic frisbee -- do you give the trophy to the owner or the dog. Damfino.

But as is often the case, they are directing their spleen at the wrong people. The FCC had a plan to accomodate low-power FM but Congress in the form of Billy 'The Extortionist' Tauzin squashed that at the behest and expense of the broadcast typhoons. This is but one case where sane people vote the opposite of the South, the Republicans are the Southern party with Southern political standards i.e. all you can steal. Unfortunately playing the seniority game gets mental giants like Trent Lott whom Senator Byrd completely victimized in the ridiculous ten-year tax cut with a sunset clause. But Billy does speak Cajun French.

In the original Communications Act, the FCC was given no authority over receivers which meant it took an Act of Congress to get 82 channel TV coverage and ban cell-phone coverage. It also led to a 'scramble it or drop dead' approach to satellite TV. It is interesting that most prosecutions for satellite TV theft are under the Copyright Act, not the program but the decoder chip.

It would appear that radio regulation or outright sale of freqs is the right way to go. It also makes a diff what sort of regulator you have. By and large, the FCC has done a pretty good job of encouraging communication rather than try to force the population to march in schrait lines. Where Congress allows them to do their job, they have with some notable exceptions put on a pretty decent performance of 'radio in the public interest'. CB is an experiment that has both outlived its need and failed miserably but it took double nickels to do it.

As one who does not read in threads and killfiles about 60% of posts your habit of commenting without at least a piece of the piece being commented upon is maddening.

Before Aaron jumps my case about aiding and abetting, I am well aware that some of my pronouncements from the depths of my navel more than likely do help freebanders to some extent. It also results in cleaner signals less likely to be a pain in the drain to all concerned so I have no problem with it. Aaron assumes that freebanders would go away if we all tut-tutted but it hasn't worked for heroin so I doubt it works here. AIDS does not go away without lots of condoms and clean needles, either. There are Judgers and Helpers in the world and not much really works unless the two get together. So playing Information Please to those bound for glory is not to my mind particularly sinful. Ignorance is Curable, Stupidity is forever. And please spare me the jr. hi justifications.

I would far rather, and your neighbors certainly would, that you run an Alpha or Commander rather than some half-assed 32-pill Belchfire. And if that amp is driven by a decent ham rig, so much the better. Someday I might understand why people freeband when ham tickets are relatively easy to obtain with less effort than the local Duncan yo-yo champ put into his hobby; I would suspect the FCC would like to know as well. But my lack of understanding does not make it immoral or fattening so ask away.

That's great Aaron. Nice links too. But, here a homeowner may do his own
work, provided:

A) He pulls a permit.

B) It is inspected and meets code.

On the other hand, with a commercial building, you must hire an electrician.
This also applies to rental property, including residential.

NOTICE TO ALL KEYCLOWNS:

There will be a marked increase in busted illegal auctions of the junk equipment and amplifiers you keyclowns try to sell. You can't do anything about it, as it is a perfectly legal thing to stop illegal acts. In fact, I dare you to try doing anything. All you little keyclown boys can do is whine, try to guess who is posting, call 'em names, and twist in your seats over the fact that the AntiKeyclowns are your complete and total Masters. So, wait and see what lies in store.

Don't it suck when you can't do doodley squat about what happens and you so much need to? I bet you keyclowns experience a lot of that. Stand by to experience more.

But there is a law that prohibits the advertisement for sale of ANY
power RF amp capable of operation between 24 and 35MHz.

> There are some restrictions on the type of
>amplifiers commercially sold in the US.

Among those "restrictions" are power RF amps capable... yada, yada,
yada. We've all heard it a thousand times, but for some reason it
isn't sinking through your thick skull.

> People using fake names (like
>the Aaron Voobner whack'o as an example) will jump at the chance to point
>such generic restrictions out.

What "generic" restriction? Maybe you can provide one example of a US
radio service between 24 and 35 MHz (or is that 25 to 34MHz? close
enough either way) where a power RF amplifier is legal to manufacture
and sell?

Just one, Skipp.

TRC-485. It's the legal 40 12 watt version of the HTX-10/Magnum 257 10-meter rigs. It's nice and compact and has a very handsome display, complete with frequency counter. (Only 5 digits though.)

Here's the catch, they were discontinued a couple of years back. You can still find them new on ebay though. Good luck to you.

I was perusing ebay and came across this.

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1362190150

Good for a chuckle. Arguably the most popular ham radio (Of the "big three,"
that is.) used on 11-meters of all time.

Turn on Italian TV, and you might see a gameshow where the contestants are all naked... and even kids' cartoon shows are littered with words like "fuck", "shit", etc. Sort of reminds me of the porn-TV bootlegging that goes on in AL, FL, and LA... except that in Italy, it's totally legal. And to think, WE are committing SACRILEGE every time we say "fuck" on CB!!! (Scary thought: Train might one day become a legislator!)

So if you read this, Aaron, never, EVER visit Italy without bringing a big bottle of heart pills---you're gonna need 'em.

The FCC has other, much more important things to worry about (Howard Stern & Dr. Gene Scott, to wit) than a bunch of us harmless nuts saying 4-letter words on CB. This is one fact of life Voobner wishes he didn't know.

No offense but it has as much relevance here as discussing a Cobra 29 on the Ham group. Keep the threads in their proper place. We Cbers can move over to the ham group (happened once before) for some CB 101 discussions and explain who caused us to clutter up their group.

Hello Bert:

Yes thats a Big Ten-4.

I had a contact inside Yaesu years ago and they believed that 30 to 40
percent of there radios where going to the CB and Freeband market. Wow.

You're trying to say that because I think that freebanding and hi
power cb and radio bootlegging is stupid and illegal and only idiots
do it, that means I'm a prude. But you're not doing it very
successfully.

>So if you read this, Aaron, never, EVER visit Italy

Wow. What a coincidence! I have a contact inside Yaesu too! Mine told me that Yaesu programmed the CPU chip to trigger a tiny x-ray machine hidden in the radio and aimed at the crotch area of the user. It was activated whenever the transmitter was illegally keyed on 11 meters. He told me that Yaesu believes that 30 to 40 percent of CB and freebander users are sterile.

can this be fixed?

amp was modified as follows:

converted to 2 mrf455 driving 42sc2879's,has 4 gauge power lead soldered to the power input but wasn't built to volt it,this was the baby driver,external fan mounted to heat sink w/on/off switch mounted to face plate,

take note of the pictures ,the fan lead is shorted (red wire)(Fan wire),I can point this out if need be,you can see it in the pics.

see the burnt part??? any help apprciated.....

Hello,
I have for sale the Ranger RCI-2950 Ten Meter Transceiver. This radio operates very well, except it has to be aligned on the USB. I do not have the book or equipment to do this. I do not have the box or mobile brackets for the radio. It comes with the Turner Power Mic. I will take some pics of the radio and email them to anyone that is intersted. This radio has also been modified to the 11 Meter band as well. Other then the USB problem, all operates well with transceiver. When switched to the USB mode, the receive audio sounds very "tinny" and the power output is not like it should be like on LSB. I would think all that is needed is a good alignment. Any questions, please feel free to ask. My email is: ka3fmo@ka3fmo.com

I am asking $150.00 or best offer for the radio. Please, you pay shipping via USPS Priority mail.

Thank You

Congratulations, you have sucessfully smoked both your input and
output circuits, most likely caused by arcing/sticking of the contacts
on that pathetic little relay. Count your blessings, though, because
that has to be one of the worst layouts I have ever seen, legal or
not, and I'm suprised it even worked at all! Jeez, you have three
boards squeezed in way too tight for any effective heat dissipation,
no RFI protection on the power leads, the aformentioned single relay
(Brian should take note about that), and what looks like a splitter
using an RFI (mix 26) core. And from what I can tell, all the stages
are resistor biased! The whole amp is nothing but a kludgework
doorstop! You should be thankful the thing just smoked instead of
starting a fire, or popping those transistors and spraying Beryllium
all through the shack!

My guess would be that the Yaesu FT 101 series is more widely used as a CB transceiver than any other "legit" amateur transceiver. Sean

Anything can be fixed but the real question would be "is it worth it". It appears that this amp was "modified" or "upgraded" by Billy Bob's Backyard (or is it Barnyard ???) Radio Repair. I'm surprised that there is no duct tape or bailing wire to be found inside this thing.

Besides the very apparent damage to the keying circuit and output combiner, the work performed is of very low quality, there are parts missing, who knows what kind of shape the six pills are in, etc... The fact that the driver circuitry is hard wired directly to the B+ (incoming 12 - 15 volts) without any ferrite tells me that this amp can be somewhat "tuned" or "detuned" by playing with the length of the power leads. This is not to mention that the electrical system within the vehicle running this amp would be exposed to a high level of RF. OOPS !!! Did you say "goodbye" to the on-board computer ????

While all of this can be taken care of for a price, i would basically recommend pulling out all of the "high performance" modifications and taking the unit back to stock (or as close as is possible). The one thing that i would change from stock would be the factory power wiring as it is too thin and chokes the unit when standing on the throttle.

Other than that, most of the Texas Star product line are very well built and designed products. I would not let someone "tweak" one of these amps unless they really knew what they were doing. In my experience, most of the "hot-rodding" of amplifiers typically results in both lower "on the band" output with an increase in harmonics, reduced circuit stability and lower product reliability. While there are exceptions to this rule, look at this way: If one could EASILY take a stock amp and drastically improve the performance for increased power output without sacrificing reliability, the manufacturer would do it. After all, they can charge you more money and make a higher profit margin for a "500" than they could using the same basic parts used to sell you a "350".

This is not to say that amps can't be improved upon. What i am saying is that i rarely see that as what really happens when "Skull Crusher" , "Gravedigger", "Channel Master", etc... (you get the idea) get their fingers into something like this. There is a LOT more to amplifier performance than seeing "numbers" on a "Dosy" harmonic reading device (Dosy's are NOT "wattmeter's").

It is "modifications" and "amplifiers" of this quality that make it easy for the Amateur radio community to say / think / do what they do to this group and CBer's as a whole. "Butcher's" (some people call them "tech's") make it easy for the hams while only lowering the quality of radio for everyone using such a product. Sean

Be careful when "opening up" these radios and others using a similar 858 type chassis. There are a few parts that tend to ignite (literally) if you get the radio to do some decent power. There are a few Tantalum caps that should be either removed or replaced to help prevent this. Can't remember their values or part numbers. As such, be aware of the potential for a small fire in your radio if you are going to try and tweak it without really knowing what you are doing. Sean

Hi Phil, how ya doin' ???

I'd have to agree (to a certain extent) with what Doc had to say. I've seen some of the Ameritron boxes (can't remember the model) running one 3-500Z do as much or more power than some other brands running two 3-500's. This is due to the use of both efficient and well designed circuitry, not overdriving the tube. As you already know though, brands and personal preference have more to do with what people buy than actual performance.

Hey Jay,

That's funny. I know a chap (Friend of the family. My uncle lives in Bellevue, WA.) who works for Icom America. He told me that they definitely know where a "significant" portion of their sales come from. I dunno? Money talks, I suppose.

Back in the late 80's, the FT-757GX (Not II) was my dream rig. Entry level back then was around a grand, although you could find an occasional $800.00 sale price. Outta my range! I had an OTA mate who ran a FT-757GX and from the first moment I heard him OTA...I still new that I couldn't swing the price tag so I sucked it up! LOL! Oh well, the AR-3500 was put into duty and the rest is history. Take it easy now. :-)

I don't know about their TV "bootlegging," but I did check out their 11-meter scene while there on vacation. While "freebanding" is also illegal; over there, the authorities also tend to turn somewhat of a blind eye toward it.

There was an incident where airport operations was interfered with some time ago. The offenders were DF'd and apprehended forthwith.

Hello Dick:

I had a old Yaesu 902-DM that was pretty great radio, and it had AM in it. In order to make it sound right on AM you had to significantly reduce the mic gain, adjust the carrier to about 20 watts, and then enable the RIT and tune a Kc or so off the main frequency so that you could hear them, I didn't have a AM filter in the IF. So switching from SSB to AM was a chore.

Also the guys who do use a lot of AM are giving the radio manufactures a hard time, because the price of radios, and then not sounding right being brand new. I am sure this drives the old Boat Anchor AM club big time.

Out of time, my ride is here for the TRW Swap Meet.....

Why would you wanna fix something that was as big a piece of garbage
as this even when it worked? I wonder what percentage of the RF
generated by this amp ended up on the actual frequency the excite was
transmitting on. Very little.

Enjoy hell out of the swapmeet. You hit on one of those things that again causes OTs to cry in the pea soup for the salt content or go into laughing paroxysms and blow their pacemakers.

I can see some junior engineer told to put AM on a rig designed for SSB (hell, even CW is done with a tone board) with three cost accountants hanging over his shoulder like vultures on a wire.

Well, we really should have a filter for AM. Noo, say the accountants. Everything in the SSB generator is done with an offset against the filter frequency so we use the CW one and the thing tunes 750 Hz off center. If we were on freq it would not get thru the filter. Gets us the carrier.

Sensing a cluster in the making, our hero calls down to Marketing who sends down a terminally hip consultant with green hair and pointy shoes. We need AM to sell it to the illegal trade, who gives rat tits if it works, man. Just put a knob that says AM so we can advertise it. This bunch of rubes would know it from P. Diddley, right?

So he calls down to Purchasing and asks what might be available from Guandong Province cheap and they set him up with the 'modulator' from their Belchfire CB line that sells at Walmart for 39.95 on special for 42 cents a carload.

So with an offset carrier, a current regulator, and an extra switch position, he sets out to design the beast so that it puts out something resembling Ancient Mary under some set of conditions. And to crash it all off, he writes the instruction manual in Mandarin Chinese which gets translated into Pidgin Swahili into French. The English version is written with the aid of a trainload of saki on Saturday morning by the senior engineers who don't even want to know what their junior DSJO (dirty shitty jobs officer) did to make it happen.

The Marketing Gnomes and Accounting Trolls are happy, the Engineering staff is designing a machine to win the next Dead Cow Heave and the CEO is looking forward to retirement in the Ministry of Industry. And lots of really crappy AM is on the spectrum with operators madly flipping knobs to copy it.

Probably better now in the days of General Coverage receivers but not by a whole hell of a lot.

Glorioski, Gunsel, there is hope for you after all. When you have a 3 watt receiver with a 4 watt transmitter the only hope is the antenna system and you found a pretty good solution.

As long as it does not show signs of ending up protruding from their roof, your neighbors will indeed be much happier campers. Bet it taught you a bit about how decent (and sneaky) operating procedures defeat mindless brute force every day in the woods.

Good job.

Nah, this is just ancient history...and pretty widely known at that. I've learned a few things during my relatively short tenure on USENET.

1. Don't insult ANYBODY (Even if they've insulted you.) and remain polite.

2. Admit your mistakes immediately upon realizing you've made one.

3. Stand up for what you believe. (Even if it's unpopular.)

4. Don't be a revisionist, tell the truth.

5. If you don't have anything nice to say... (Didn't everybody's parents teach them this?)

...you generally won't get attacked. (Those who do usually aren't taken all that seriously and are easily ignored) Take it easy now.

That's odd. I have a cousin who works for Icom in Japan. He told me
that Icom is going to discontinue 11 meters from their general
coverage TX capability because the Japanese executives at Icom feel
that people not obeying International Treaty rules is 'dishonorable'
or something. Strange culture huh?

Hello Dick:

Well we all had a pretty great time. I think the FCC designated definition would be a Balls out Bitchen time. I am probably gonna to go Tango Uniform for a combat nap.

We all fled the Mojave Desert, in one of the locals new Van, it was nice. Remember when the designated driver could only have 8 drinks. Had a very well stocked Ice Chest, drinks and sandwiches, and chips, just great. Of course everyone had to kick in a 20 or so. But no big sign that said: "Show us your Tits"

Talk about "The Legend Lives On" Picked up a Museum Mint Super Bitchen Yaesu 757 GX-II in the box, with the matching power supply for 300 Bucks. I offered it to one of the other guys who didn't want it, but I didn't need to hear that twice. The guy even fired it up and showed us it worked!! Also picked up a few Motorola VHF Handhelds, extra batteries, and chargers from the same guy. He programmed them for the freq's and PL tones we wanted, pretty neat-O.

The coffee was typically poor, but will keep ya going without sleep for a day or two. I think after a while you come to expect the bad coffee? Maybe it makes ya buy more stuff ya don't need?

At times theres guys who fly in from where ever into LAX, and hit the TRW Swap Meet, we got to meet some of these guys, wow talk about your hard core bargin hunters. They where telling us the hard part was getting a shopping cart into the Taxi, and returning it, afterwards after the swap meet. We kind of didn't believe them until the one guy comes to the coffee table with a shopping cart just full of all kinds of stuff. We all laughed, then thinking maybe there is hope for us after all!!!! After seeing these guys. But its nice to meet people ect.

Yeah I agree the AM is pretty poor on the ham rigs, but seeing the Old Man Mountain Mans Icom 746, it worked great and had good audio quality on AM, just has a reduced output no big deal. Thats ok.

Maybe you need to fly on it to LAX, rent a room and we can have a Pre-TRW Swap Meet Party, have a few honey's stop by and trash the place, well maybe just a few drinks. I crack myself up......

DSJO I like that.

Which, of course, begs the question. If it is not legal in the U.S. and few if any self-respecting Amateurs would be caught dead with one, why is it imported? Screw the legalities, lets talk economics. Costs money to ship it in, futz with it and ship it out to the Peoples Principality of ZingazappaLand, all three a century they are likely to buy with money they do not have. Who kiddeth whom? These things are illegal in any country literate enough to write rules.

I suspect that somewhere over the next spot cycle things like this are going to be caught up in the great security campaign and a container or two will be used for landfill which will end the whole caper.

That IS strange, Aaron. Especially since Japan is the only ITU signatory nation that openly disobeys the ITU treaty by allowing no-coders on HF, specifically 10-meters. Strange culture, eh?

The UK's a close second with their "Foundation" class license...but not quite since it still requires some "familiarity" with Morse code.

ILLEGAL CB TRANSCEIVER LIST

The FCC's Office of Engineer and Technology (OET) has evaluated the devices listed below and has concluded that these devices are not only amateur transceivers but can easily be altered for use as Citizens Band (CB) transceivers as well.

As such, OET has further concluded that these devices cannot legally be imported or marketed within the United States for the reasons discussed below. Further, the FCC General Council has issued a decision in a specific case involving one manufacturer and has concluded that dual use CB and amateur radios of the kind at issue may not be approved under the Commission's rules and are in violation of several rules including the RF power level limits of 47 CFR 95.639. (letter from Christopher J. Wright, FCC-OGC to John F. Atwood, US Customs Service, dated May 17, 1999).

Transceivers used in the Amateur Radio Service below 30 MHz do not require FCC authorization prior to being imported into or marketed within the United States, but transceivers for other services, including the CB Radio Service (CB), do require Commission approval. The transceivers listed herein and other similar models operate in the amateur "10-meter band" and are often referred to as "10-meter" radios

or "export" radios. The amateur 10-meter band uses frequencies that are very close to the channels set aside for use in the CB service. Some of the transceivers that manufacturers call "10-meter" radios either operate on CB frequencies as manufactured and imported or are designed such that internal circuits can readily be activated by a user, a service technician or a dealer to operate on CB frequencies. According to Section 95.603(c) of the Commission's rules, a CB transmitter is a transmitter that operates or is intended to operate at a station authorized for the CB service. 47C.F.R. ï¿½ 95.603(c).

The Commission's equipment authorization experts in the FCC Laboratory have determined that the transceivers listed herein and other similar models at issue here are intended for use on the CB frequencies as well as those in the amateur service because they have built-in capability to operate on CB frequencies. This capability can be readily activated by moving or removing a jumper plug, cutting or splicing a wire, plugging in a connector, or other simple means. Thus, all the transceivers listed herein and similar models fall within the definition of a CB transmitter. See 47C.F.R. ï¿½ 95.603(c). A CB transmitter must be certificated by the FCC prior to marketing or importation. 47 C.F.R. ï¿½ï¿½ 95.603(c); 2.803.

Moreover, the dual use CB and amateur radios of the kind at issue here may not be certified under the Commission's rules. Section 95.655(a) states: "ï¿½.([CB] Transmitters with frequency capability for the Amateur Radio Services ï¿½ will not be certificated.)" See also Amendment of Part 95, Subpart E, Technical Regulations in the Personal Radio Services Rules, FCC 88-256, 1888 WL 488084 (August 17, 1988). This clarification was added to explicitly foreclose the possibility of certification of dual use CB and amateur radios, see id, and thereby deter use by CB operators of frequencies allocated for amateur radio use.

In addition, the Commission's equipment authorization experts have determined that these devices violate or appear to violate a number of the rules governing CB devices. For example, they may use emission types not permitted, or emit RF power at a level in excess of the levels permitted in the CB radio service. See 47 C.F.R. ï¿½ 95.639.

In view of the foregoing, the following "10-meter" transceivers are not acceptable for importation or marketing into/within the United States. Importation and marketing of these units is illegal pursuant to Section 302(b) of the Communications Act and Section 2.803 of the rules. Willful violations of the Rules and the Act may subject the violator to a monetary forfeiture of not more than $11,000 for each violation or each day of a continuing violation. The Commission continues to review this type of equipment, and additional makes and models may be added to this list in the future.

LIST OF TRANSCEIVERS
ILLEGAL TO IMPORT OR MARKET
ï¿½

GALAXY - models: DX33HML, DX 44V, DX55V, DX66V, DX 73V, DX 77HML, DX 88HL, DX99V and Saturn Turbo
CONNEX - models: 3300, 3300HP-ZX, 3300 PLUS and CX-3800
MIRAGE - models: 44, Galaxy 88, 9900 and 2950EX
NORTH STAR - models: NS-3000 and NS-9000
PRESIDENT - models: Grant, J.F.K., Jackson, Lincoln, HR-2510 and HR-2600
PRO STAR - model: 240
RANGER - models: AR-3500, RCI-2950 and RCI-2970
TEK - model: HR-3950
UNIDEN - models: HR-2510 and HR-2600
SUPER STAR - model: 121
For further information concerning the listed transceivers or similar models, contact Ray LaForge or Gary Hendrickson at the FCC Laboratory, 7435 Oakland Mills Road, Columbia, MD 21046, (301) 362-3041 or (301) 362-3043 respectively, or E-mail: rlaforge@fcc.gov and ghendric@fcc.gov

---

When asked about the Ranger RCI-2980 and RCI-2990, the reply received was:

Date: Mon, 04 Feb 2002 14:44:21 -0500
From: "Gary Hendrickson" <ghendric@fcc.gov>
We have not had the opportunity to evaluate these two models of Ranger radios, so I can't specifically that they are illegal. We would be happy to evaluate these models, if a "virgin" unit could be obtained from the manufacturer. But until we have such an opportunity, we must assume that they are legal, in that they are not designed and intended to have the capability of easily being altered to operate outside of the amateur bands.

However, if you can determine, on your own, that *out-of-band capability does exist, as defined in the other FCC information which you already have, then you could reasonable assume that they are not legal.
73, Gary Hendrickson

> *This radio has also been modified to the 11 Meter band as well.

Importation and marketing of these units is illegal pursuant
to Section 302(b) of the Communications Act and Section 2.803 of the
rules. Willful violations of the Rules and the Act may subject the
violator to a monetary forfeiture of not more than $11,000 for each
violation or each day of a continuing violation.

Dick, your technical knowlege is great, but from your comments, you either are or have been an engineer. Gawd, the stuff we go through at my job. 'You're spending too much time designing that seal, just use this O-ring'. And that machine produces 5 times the scrap and half of the good pieces that any of the other machines produce. We're still fighting that one. Geeze, just unbalance the carrier and transmit upper or lower sideband plus carrier. Then, of course, you can just cut that green wire, omit the jumper, and you've got full power output on AM! Not only that, but the thing will swing like crazy! I should have hung on to that Johnson Ranger I (complete with 27 MHz from the 50s). It would have made a swell boat anchor for a canoe - and the D-104 with cord would have functioned as the rope.

73 from Rochester, NY
Jim
ps - if you're still working, could you use a couple of accountants and a manager or two? With 220 people on the floor, we have 438 offices!
IS THIS NUTZ, OR WHAT?

3014. TO: MURS Consumer Radio Manufacturers

Newsgroup: rec.radio.cb
Date: 2002-06-30 00:18:34 UTC
From: horseshoe7@yahoo.com
Message-ID: <5f4fe4c2.0206291618.e6b4775@posting.google.com>
Source record: 128920
Cross-posted to: alt.radio.family,rec.radio.cb

If the consumer(bubble-pack) radio manufacturers can get in the habit of providing external antenna connection provisions on handheld MURS units, these handheld units could serve double duty as walkie-talkies and mobile/base units(as you could hook it up to a mag-mount antenna when you got in the car, or to a rooftop high-gain antenna when you got home)... and this is where MURS can carve out a niche in the consumer radio market vs. FRS & GMRS/FRS combo radios (which by law can not have external antennas). Unfortunately, the first manufacturers attempting to market consumer MURS radios haven't figured this out yet. With external antennas, MURS has range (and marketing) advantages over integral-antenna FRS/GMRS radio... without external antenna provisions, MURS radios are actually at a marketing disadvantage due to the limited number of channels.

Manufacturers: Don't try to treat the MURS market as just a VHF version of FRS... take FULL advantage of the fact that MURS allows external antennas... state the MURS range advantage right on the package... in fact, stating that MURS radios(with external antennas) allow 20+ mile range is no more of a lie than those who are currently stating that GMRS/FRS combo radios have up to a five mile range. Think about it, if you were a consumer, which radio would YOU buy - the one with up to five mile range, or the one with 20+ mile range?

Actually no. Started in EE and got a degree in -- wait for it --
Economics. Picked up an MBA along the way and worked for -- wait for
it -- an insurance company, after aquisitions Employers Insurance of
Wausau - A Mutual Company, and died before the last aquisition, actually

set up my last stupidvisor for a nice and tidy settlement when the legal staff and HR read the petition and summons. The company is now kaput. So I am not ever going to live in a box under the viaduct. I have a job at which I am quite happy and in better health than in many years. I drive a bus. Cart kids between campuses at Nebraska/Omaha all year, cart jr and sr hi kids for a Baptist Church on Sunday, and work an after-school gig in South Omaha at the Y and Boys and Girls Club. If I dug real hard, I might find a necktie and I think the suit isn't too baggy having lost some tonnage. I never expect to wear either again alive and only dead if my instructions are ignored.

You and I agree: just do SSB with carrier in the manner of CHU (digital really) but I have never seen this done. Seems trivial. Sounds like the Marketing Gnomes at work or Engineering playing with the Accounting Trolls. God knows what the Engineers have sold Mahogany Row about SSB or maybe they are the only ones left with ethics.

And I note your Chief-to-Indian ratio has gone to pot just like everyone else's. One of the great facts of existence is that American organization is based on two older orgs, the Roman Army and the Catholic Church so expect the worst and you will be amazed only occasionally. Adult behavior is neither expected nor rewarded.

I have two talents in life, Picture Thinking and Number Crunching. Both are fairly rare so I was well paid for one not supervising. I did things like set up a computer model for frauds; when you handle Assigned Risk Pools the claimants are choirboys next to your customers. My claimant fraud software was lifted right off my machine by the officials in charge so I assume it was doing a better job than they were and it was written for the Training Department. So I met the Accounting Trolls and the Marketing Gnomes up close and personal and I read Dilbert a lot.
I am interested in lots of things, a habit I got into at work; amazing how many composers, writers, etc. did it over lunch at Galactic Interplanetary Mutual (GIP-M). A number of us bailed at the same time or close to it and all of my friends are a whole lot happier. But then I knew a lot of very independent people. One dear lady described her early life as working in the ER on the messes the police brought in (she is an RN), going out and drinking with them afterwards, and being arrested by them on her days off for political activism. Neat broad. Our Life Actuary is teaching at Michigan Tech which he loves.

If I were planning to be a CEO today I think I would advise an undergraduate major in Speech and Drama followed by Law School with a minor in Fraternity. It would help if you didn't know a damned thing about Accounting, Management, or anything else. WTH Generals have been doing that for centuries and they only get in trouble when they try to lead armies. We have a poor schlemp now that wants to lead a country; God help us.

Without going too deeply into it, from the viewpoint of 58 years I expect to make more money after I go on SS than I ever netted working because I lived thru an exceptional period in America and acted accordingly. You

younger people are going to also experience an exceptional period that unfortunately is not going to be pretty. The pols and Republicans in particular have pissed away the chance to fix and change it and they not only blew it they made it worse. But next to my dad's bunch, neither of us knows what trouble is. I hope I am wrong but I won't bet on it.

Dick N&#65533;BK

Cute... Who authorized you to cross-post your reply?

Your statement MAY be true, but you can't deny the fact that group is
useless for any form of discussion due solely to the fact that it has been
over-run by a bunch of ignorant wanna-be's. You can't exchange information
when nobody even wants to participate in the group because of having to sift
through hundreds of useless posts that have nothing to do with CB radio.
The group is full of nothing but non-stop arguments brought on by all these
wanna-be's. Are you one of them? So far your post makes you sound like
one... Just out to start a fight...

Doc, i went back and re-read the pertinent parts referring to hams. I was
not very clear there. I should have said that it is "butchered up work"
like what is inside that amp that makes it easy for the ham's to criticize
the modifications and upgrades that many cber's strive towards making. The
end result of work like that is a drastically increased amount of harmonics,
IMD, reliability problems, etc... As such, i can agree with the hams that
DO "gag" about that kind of stuff. I am not "blaming" anyone other than the
butcher's that tell people that they are doing them a favor and end up
ruining their gear for a nominal fee. Sean

"Hacking"? You call accidentally clicking on your name while in the Google newsreader "hacking"? Believe me, I didn't intend to see a list of dozens of your posts to other groups such as alt.suicidal.feelings and alt.bicycleseat.sniffing. I only read the one in alt.pets.deceased (or whatever it was) because we just lost a pet a few months ago. Trust me, I can sincerely sympathize with your loss. Now that we've shared a hug, it's back to calling each other silly names.

Oh, Sweet Jesus On A Bun, it's those turds from EEI --- back again under a new name. EEI ripped off so many customers and broke so many laws that they had to go Chapter 11 and start up "1stopelectronics.com", complete with phony discussion forum, 'turbo tune" scam, and illegal amp sales. Guess I'd better warm up my letter-writing campaign to the FCC again. Well, at least their name is appropriate: it's just "one" last "stop" on the road to a conviction.

Yeah. There's quite a few wannabe technicians and engineers, but until
they pay the dues and do the homework, they are just going to remain
wannabes.

> You can't exchange information

That "information" is usually used to subvert federal laws. Most of
this "information" is a half-assed attempt to re-engineer a piece of
RF equipment, and the source of the same usually has only a
rudimentary knowledge of how a radio works.

>when nobody even wants to participate in the group because of having to sift
>through hundreds of useless posts that have nothing to do with CB radio.

Yes indeed, there are too many posts regarding amps and bootleggers.

>The group is full of nothing but non-stop arguments brought on by all these
>wanna-be's. Are you one of them? So far your post makes you sound like
>one... Just out to start a fight...

Gee, it looks like you are looking for one yourself. If you don't have
a killfile, and you can't practice self-restraint, maybe you should
check the yellow pages under "psychotherapists".

Not according to Skipp! He has a license to use an amp on services
between 26 and 54MHz! But for some reason he won't answer the simple
question: What services between 25 and 34MHz (24 and 35MHz?) are
allowed to manufacture and market power RF amplifiers?

Hey Skipp, there is such thing as an honest mistake, but claiming you
have a license that contradicts federal law is a stretch. Care to
respond? Or will you, like the rest of the BS shoveling outlaws in
this newsgroup, ignore this challenge to your integrity?

A better question is what sort of thinking causes otherwise sane people to
believe that there is some vast amount of 'headroom' in these gizmos to be
tapped and released by Red the Tech at Happy Larry's Truck Stop, Funeral
Parlor, and Emporium of CB Delights.

If some preacher could tap this quasi-religious belief in butcher techs,
he could go thru the world like a dose of salts.

Did ya' all notice the front of the amp said DX-500. Inside had
a driver stage of 2x455. A DX-667V has a driver of 1x2290 into
4x2879. This amp is one hell of a cluster.....

3048. A challenge...

Newsgroup: rec.radio.cb

From: sparky@cet.com
Message-ID: <3d1eec48.2109229@news.cet.com>
Source record: 128954

... to any of these wannabe techs to construct a working superhet CB receiver of their own design. Photos and verbose documentation is required, including an operational description of the circuits in the design. And if Tim wants to try and meet this challenge, someone please give him some help -- he's gonna need a lot!

But guess what? This challenge will never be met, except with a lot of whining, moaning and gnashing of teeth. I only posted this to see how many excuses they will provide NOT to accept the challenge!

Let the excuses begin!

3049. Part 15 operators:

Newsgroup: rec.radio.cb
Date: 2002-06-30 11:42:55 UTC
From: sparky@cet.com
Message-ID: <3d1eedb2.2470910@news.cet.com>
Source record: 128955

There are a lot of people out there that are interested in operating under Part 15 of the FCC regs. This includes the lowfer band (160 - 190 kHz), as well as the AM broadcast band with a power of 100mW, and other parts of the HF spectrum with varying amounts of ERP. So just as a suggestion, put "P15" at the beginning of any post with a topic regarding this service. That's what I will be doing from now on.

Wrong. Not one unit of "any" model, but one unit of "one" model. Read
if you can:

"Sec. 97.315 Certification of external RF power amplifiers.
(a) No more than 1 unit of 1 model of an external RF power
amplifier
capable of operation below 144 MHz may be constructed or modified
during
any calendar year by an amateur operator for use at a station without
a
grant of certification."

For the legally illiterate, that means one amp, period.

How do you figure that Frank?
If the FCC only wanted one single amp modified
or made a year, they would state that.

"No more than 1 unit of 1 model of an external RF power
amplifier"

If they wanted one amp they wood word it like this:

"No more than 1 unit of any external RF power
amplifier"

So Scott is right, so have them word it correctly
for your beliefs and you'll be happy.

The last time I transmitted was over ten years ago, but I still can if 3 KW is enough.
The last time I listened was when some hot dog interfered with and FBI bust (drunk)
and told them to get off HIS frequency. He had a slider and a Hell of a high power amplifier
down to about 26 MHz and then fell asleep on his mike key button. Not enough to say he
screwed with the government, but was stupid to the tenth power and they got out the locating
equipment and found his house (and him of course). Anything that even looked like a radio part
was confiscated (permanently) and he was subjected to about 1 year in the federal pen. I am sure they could
have gone farther (since it was a major drug bust) but I think they just changed frequencies and continued
with business. Problem here is that he could have been splattering all over the local spectrum and really
pissing of the Feds (Not smart from any point of view). Stay within your band and these days they don't
seem to care who blasts who, but get out ot the frequency range and it is your life.
Bill, Now just a listener to cowboys and Illegal immigrant gangs which I can't understand anyway.
I bet the feds monitor these though.

Ameritron doesn't transmit above 15 meters out of the box, but it is usually a quick snip to change that, and they are quite willing to share the secret upon receipt of proof of licensure.

Subject: New Amp on Market!
Newsgroups: rec.radio.cb
Date: 1999/02/16

Hi All,

I got a phone call today, It seems there's a new amp on the market and I was asked to try and sell one or two... :-) That is the object of being a dealer right? (right?!?!?!?!

New! New! New! White Faced Palomar 500 Mobile New! New! New!
Uses 4-1446's
does from 450-520 (This is what I was told okay, never seen one yet!
2 stage
recieve pre-amp

$200.00 retail price

Also...

Galaxy 1K Amp (Pirate's Galaxy) - $630.00 - Mobile amp, 2 stage, pre-amp, fan on amp...

if interested, Inquire via e-mail only!

thanks!

It do?? All it means to me is that it is not manufacturing so long as I build only one of a given design in a year (where the 10 models come from is news to me). Presumably this means different devices as there really isn't much more to an amp although I might get away with a few cutes on output tanks.

So if I have the equivalent of Norm Abrams' workshop out back and have a fetish to build one amp using every tube Eimac or Svetlana ever made plus some old horses like 813's in one year, there does not seem to be any bar against it. And if I then branch out into FETs, FET modules, bipolars, there does not seem to be a bar against my craftsmanship. Now having the local CB population hanging around going, 'Gee, Mr. Wizard', charging $3,000 admission, and giving them away as door prizes might incur wrath but only because I am selling them and nothing I am likely to do is going to convince anyone otherwise.

There is certainly an issue of reasonableness if the issue came up but the intent of this is to set a negative, this will not be construed as manufacturing for sale. The example is extreme but I think if I have some good self-educating reason for it, I at least have an affirmative defense.

Think you are getting a bit wishful, Sparks.

You should not see them come out of the box that way. There is a mod kit that most reputable stores will not sell without a Tech Plus or above but where they know that there is a license behind it, a lot will just do the mod and send the buyer on his way.

Source record: 129002

Sparky, I simply posted my point of view. You can agree or disagree with whatever it is that i say on any given post. That is your option and your right.

As to my comments, i think that they are pretty self-explanatory. I am of the belief that radiated power should be kept "in-band" regardless of the frequencies used. Since most "hacking" (especially of amps) results in an even greater amount of distortion, i do agree with "hams" that this should be left up to people that are qualified to make such modifications and have both the know-how and test equipment to do it correctly.

I also agree with quite a few of the ham's here that think that the mass majority of cb type amps on the market are JUNK. This is especially true of many "competition" style amps i.e the Dominators / Real Deal's, Skullcracka's, Foxie, Storm, etc... Many of the more commercially available amps such as TNT / Comet / Silver Eagles, Gray, etc... and the "generic" amps produced under the names of Palomar, Boomer, Superstar, Shooting Star, Cobra, Galaxy, etc.. are all under-designed pieces of crap that should be avoided. Other examples of products that should be avoided are similar to the one shown in the pictures that started this thread i.e. one-off "customized" pieces that show a lack of basic understanding and the knowledge of how to properly achieve greater output without compromising the product to a great degree.

Whether or not you agree with this point of view is up to you. Whether or not others support or disapprove of this point of view is up to them. Let them speak for themselves as to what they find pertinent to any conversation or thread. Even if the mass majority of folks here don't agree with me and don't want to hear my opinion, i can still post it here no matter what. One does not need a vote of popular approval to post here as can be evidenced by the mass majority of chaos that takes place here. Sean

Not at all.

> Don't whine to us, write the manufacturers.

You don't think the manufacturers monitor these newsgroups? They
would be pretty foolish if they didn't.

In any event, I was also thinking of submitting this as a letter to
the editor of National Communications Magazine.

> You seem to have too much time on your hands.

It takes but a few seconds to post a message to a newsgroup, a bit longer to submit a letter to the editor of a magazine... but it would take quite a bit of time to determine the addresses for all of the potential MURS radio manufacturers.

Ok, let's run with it, shall we? Firearms end up in the hands of criminals ONLY after they've been illegally gotten. Stolen or "accidentally" lost shipments that end up being sold out of a car trunk on the corner of Marcy & Myrtle.

An unlicensed radio operator that intends on operating on 11-meters can just call up Texas Towers and have that FT-840 delivered to his/her doorstep. (Ask me how I know this.) Big BIG dofference.

Yes, firearm manufacturers DO know that a precentage of their product will (not might) end up in the wrong hands, but they also know that when it leaves thier facility as well as a licensed dealer's, a protocol must be followed.

You refer to illegal CB as if it were a legitimate context for tech's
to operate within. Since we know that mods to type accepted CB
transceivers and the use of RF amplifiers are prohibited, no tech can
"do it correctly". Anyone performing such work is operating an illegal
business in a black market environment in contravention of FCC rules.
There's nothing 'correct' about that.

Not to be contrary, but since freeband ops are themselves anonymous
bootleggers, there's no way to confirm anything they tell you OTA.

Looked some more at the FT757GX in question on eBay. Of course the
radio would have to be gone through and "de-keyclowned", but,
providing it sold for less than $300, this would make an excellent rig
for someone wanting a digital general coverage receiver/all ham band
xcvr, and who might easily acquire their General ticket with an

afternoon of studying.

Just what the ham community needs, cbers getting on the 15 meter
band illegally. You have already done enough to screw up the 10
meter ham band, now I guess you want to bring the sewer to 15
meters as well.

You don't get it: it's not just hams that have the brains, equipment
or authority to do a job correctly. And it doesn't take a ham to make
an observation about the quality of any radio equipment. On the
contrary, there are some hams that run worse equipment than most IOs.
And some hams are, in fact, IOs as well.

>product to a great degree.

Any amp built with the intention of being used with a CB should be
avoided, not just because it's illegal, but because the manufacturer
has built a product without the scrutiny of a legitimate market. If
you get a bad product there is no legal recourse for the buyer, and
the manufacturer has no legal recourse for libel or slander against
the product by digruntled patrons or market competitors. Also, the
company can make any claim about the product without fear of being
sued for false advertising (unless the claim is that the product is

legal). So any reputation the product might have, good or bad, is not credible at all.

>Whether or not you agree with this point of view is up to you. Whether or >not others support or disapprove of this point of view is up to them. Let >them speak for themselves as to what they find pertinent to any conversation >or thread.

I'm stopping NOBODY from saying anything they want.

Funny, the 'template' of their business operation is virtually the
same as EEI's. Anyway. Email me any info you got on these guys: names,
business addresses, which amp mfgr is backing them, etc. and I will
put it in the pipeline.

By golly you're right. It's a good thing I'm not planning on taking
the exam!

What's the difference between using "P15" or OT, FS, FA, FT, or even
"Re:"? Quit whining, Scott.

Not like it wasn't predicted. But get one thing straight: Those are
illegal operators, freeloaders, bootleggers and pirates, but they are
NOT CBers!

You posted the 6 lines above. You "suggested" putting "P15" on posts.

Sounded like a whine to me. I suggested a new group just for part 15.

That's more constructive then forcing people to put "P15" in their subject line.

You know Aaron it takes a lot of people to make one voice heard. You give me some info and let me know where to mail the letters and send the email I'd be glad to pass this around my group. I'm sure the more the FCC and the FTC are bothered by letters and emails the harder they'll press for an investigation/conviction.
